1. New Pima County system

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 1999-11-23 01:28:21 UTC
From: Dan Rollman
Topic: 1 Message: 1

Welcome to the new list, for those who have joined. Feel free to invite any fellow hobbyists in and around Arizona to join this new email community as well.

Anyone have any further info on the new EF Johnson Multi-Net II 800 MHz Trunked Radio System going into service in the Tucson area for Pima County? The frequencies licensed for this new system are shown below. Are these active yet? Has anyone in Tucson tried trunk tracking this using a Pro-92 to attempt LTR on the system? As best I know, Multi-Net is not the same as EF Johnson's LTR protocol that the Pro-92 from Radio Shack is capable of tracking, but who knows.

Now that I'm up in Tempe, monitoring the action in Tucson is a little more difficult!

Hi Dan,

How are things going up there in Tempe? I hope all is well with you. I have been pretty busy down here in Tucson remodeling our house. It is a slow process when you do it your self and try to manage other things.
I have not heard anything new on the new PCSD system. No sign of new radios out yet. The EDACS system is still up and running. I have been researching the LTR vrs. LTR Multi-Net difference for sometime now. I really have not found anything to help out as far as monitorablility goes. Yuma has a Mutli-Net system up and I have been tempted to go take a listen. Everything I have heard says it can't be done. The new frequencies do have squelch breaks frequently and the last channel of each of the groups seem to have constant carriers. Scanning the groups with the OptoCom and TrakStar set for LTR does not stop on the squelch breaks or the dead carriers!!! I have not heard voice on them yet in trunk mode or conventional.
I have never been able to get Joe Cardani to answer e-mail. I was trying to get on the E-Trax mailing list and get info on the rumored L-Trax for LTR. Do you have a good connection with him?
Keep in touch and take care...

Let us know on the list if you find anything else out on the new system,
Wayne! I'm sure it'll get some activity soon. My brother (a Tucson area
Firefighter) tells me some PCSO friends of him have mentioned the new
system and that new mobile radios have supposedly begun to be installed in
some department vehicles. No further, though.

Nor have I. Not sure what's up with Joe. The E-trax list is pretty much
dead, anyway. Though I've always heard that Multi-Net is very different
from LTR, I hoped (and for some reason still hope) the new system will
somehow be monitorable. Who knows... I suppose we'll see soon enough!

Nope, sorry, the 92 is incapable of tracking multi-net systems. It seems
like they're always going to be a step ahead of us.

Hi,

I'll try and help you if I can. I am looking at the Southwest Frequency Directory 5th Edition (1999-2000) book that I edit, and not much has changed in Cochise County since this edition of the scanner guide was published. I don't know of any other lists or websites dedicated to Cochise County, but the SWFD book does cover it with 8 pages for Cochise County.

Anything in particular you are looking for we can help with? Cochise County SO maybe? Or Border Patrol?

7. Pima SO System

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 1999-12-03 16:46:01 UTC
From: Dan Rollman
Topic: 7 Message: 7

Hey Wayne! (or anyone else in Tucson)

I was home for Thanksgiving weekend and noticed the old EDACS frequencies and talkgroups were in use as usual, but I did notice there was some brief voice activity on the new frequencies, presumably the ones for the new system. Sounded like MultiNet analog. Was unable to find a control channel, but they were clearly trunked (conversation hopped around a bit), which is typical of both LTR and MultiNet protocols. Not sure who the users were, but it actually kind of sounded like Probation or JIPS (Juvenile Probation). Any idea if 155.535 and 155.820 (the Probation VHF repeaters) are still in use? If not, maybe they are the first user of the new Trunked system.

Let me know if anyone else pops up on the new system if you happen upon any other users.

Dan,

Yes, there has been activity on the new LTR frequencies. I have heard 19xx id's for the last week. I think they are Animal Control officers. The EDACS channels are still in use for law enforcement. LTR radios are installed in PCSD patrol vehicles and portables are being issued to the other personnel as they go thru in-service training. They are going on-line w/ LTR mid to late December.
I have tried to track the new LTR channels with the OptoCom and TrakStar without success. It may be that I am not entering in the data right. Do you know of any other LTR systems in Tucson that I can play with?
155.535 / 155.82 were still being used as of this past week. Keep in touch...

Hi Wayne!

Good info, thanks! Do you have some new information that the NEW system IS in fact LTR? I thought we had semi-concluded that it was EF Johnson MultiNet II, and that MultiNet II does NOT use an LTR protocol, but an even newer one, so it would not be "trackable" using LTR systems. Not sure on that, just what I thought had been concluded earlier.

Dan,

Yes, my understanding is that it is a Multi-Net II system. Here is a
link to the press release:

http://www.transcrypt.com/Pages/News/pima.html

I have a habit of using LTR as a shortcut to typing Multi-Net II. I really
do not know the complete differences or similarities of the two systems. I
am also of the understanding that Multi-Net was not currently monitorable.
If you have knowledge of a true LTR system here in Tucson, I would like to
compare tracking it to the new PCSD system.
I receive trunked audio (full conversations) on the new frequencies
using an AOR8000 but random broken audio (not even full sentences) when
trying to track them as a LTR system w/ TrakStar???

12. LTR & PRO-92

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 1999-12-05 03:59:53 UTC
From: AZscanner
Topic: 12 Message: 12

Been playing with mine this weekend. It doesn't flicker IDs here, but it DOES recieve talkgroups that are not programmed in the closed mode, but only with the squelch down low. Put the squelch high and it seems to go away. We only have 1 LTR system here, and no MOT or GE (it's a hick town). I haven't had any experience with the other trunking formats.

From: AZscanner
Topic: 13 Message: 13

Was playing with a Pro-92 this weekend, and it wasn't to bad in the LTR modes, but...when Monday hit it was baaad!

I tried to monitor 1 group on the LTR system here. In the closed mode all I heard was phone calls (not intermod/images) and other talk groups and all with NO TG IDs displayed. I had our dispatch do ten counts on our TG and IT NEVER HEARD IT because it was too busy hearing everything else.

I like the concept, but there are no MOT or EDACS here and it seems excessively priced for a PL monitor for standard systems.

I will be returning it for now.

That has been much the experience of just about everyone I know who has purchased the Pro-92. Kinda unfortunate after all the hype!
As you say, though, it is a good Alpha/PL conventional scanner.

However, most agree, the new Uniden SC200 is the way to go if what you want is PL/DPL and a 10 character Alpha display. I order mine yesterday and would be happy to let the group now how well it works. The SC200 is priced well under $200 from retailers on-line (much less than the Pro-92). Obviously it doesn't Trunktrack, but in my opinion the BC245 is still the radio to have for Trunktracking.

Anyone with a Pro-92 having good luck on systems here in Arizona? If so, which?

Prescott LTR system operated by Intermountain Communications located on 'P' Mountain east side of town:

861.1875 -> 865.185 + 861.6375 -> 865.6375 in 1 mhz steps

TGs so far: 015121 Ace City Cab, 011115 Medi-Cab, 011217 Prescott FD Batt Chief?, 015212 Sheldon St Taxi, 019221 American Towing?

Ace Cab and Fire Depts appear to have a seperate ID for each radio.

I sent mine back to RS due to above post.

Dan,

The PCSD Multi-Net radios are being issued and will go into service real soon. I have the talk-group matrix which I will try to rewrite and send along to you. It is a bit confusing when you first take a look at it, but makes sense when you review the specific radios operating handbook.

This link will take you to the portable radio being issued to PCSD personnel:
http://www.transcrypt.com/Pages/Multi/8160.html

This link is for the mobile radio being installed in vehicles:
http://www.transcrypt.com/Pages/Multi/9753.html

I have put out several messages on other lists / newsgroups for any info on trunk following a Multi-Net system. See ya...

From: Smalley, Phillip
Topic: 22 Message: 22

Just in case anyone missed this list I posted to r.r.s. and a.r.s., I am reposting this info to our Phoenix list. So far I have not heard any activity on these frequencies, but they are scheduled to become active within the next year.

The new system is rumored to be analog motorola type II, with a move to digital modulation in 5 years. The system will carry voice and data for Phoenix fire, police, and other city departments.

As more information becomes available in online articles and from monitoring these channels, I will update the group.

It's my guess that the following 64 frequencies will be split up over 3 systems, two for voice and one for data. Until the system goes on-line however, no one knows for sure.

New Phoenix TRS frequencies

From: greyfox001@aol.com
Topic: 24 Message: 24

Hello,

Was wondering if anyone has information on 800 and 900 MHz Commercial trunked systems in the Phoenix area?

I was told to visit some of the trunktracking pages. They provided plenty of information the public safety stuff, however nothing worthwhile in the commercial arena.

If anyone has information, particularly system names, types, freqs, and fleetmaps for the BC-245, please email to me. It would be VERY much appreciated.

Thanks in advance and Happy Holidays.

Paul

Are there any scanners that pickup EF Johnson systems? (So much for my PRO-94)

Also, does anyone know the Freq. of Tucson PD's MDT system?

John,

Here are the new frequencies for PCSD and the EFJohnson system.

Mt Lemmon
856.2250
857.2250
858.2250
859.2250
860.2250

Tucson Mtn
861.0000
862.0000
863.0000
864.0000
865.0000

Elephant Head
860.2500
861.2500
862.2500
863.2500
864.2500

Some of the old GE EDACS frequencies are also being used in that new system
as well. take care...

Wayne

From: schmich@azstarnet.com
Topic: 30 Message: 30

Hi Wayne,
The first message to you I worded wrong but you gave me the correct answer even if its the one none of us want to hear. Probably not much chance Uniden will upgrade these radios, we'll have to buy new ones. I'll try the channels you listed and I'm sure your right, they won't be much fun to listen to. Thanks for all your help.

Morning all... new to this internet stuff, but long time scanner buff.... I was surfing the "onelist page" and found it somewhat confusing, so I decided to post this note, in hopes of getting some help with what it's all about ect.....
I am a recent transplant to Cochise County (3 yrs now) and prior to that I spent 16 years in the Phx area. Good scanner listening there!..... I have an old copy of the Az. Freq. Dir. (circa 94) and find it to be reasonably accurate for the metro areas, but find that it's alittle short in the Cochise County listings.... maybe I can help (maybe the current book has the updated listings... dont know)! I am employed in Sierra Vista at the local 2 way shop (for 2 1/2 yrs now) as a field para-tech. and we take care of about 80% of the county's Public Safety stuff and a ton of stuff on Ft. Huachuca..... so if there is a need, let me know what it might be, and I will do what I can to give accurate info!

From: FLANO
Topic: 31 Message: 34

Hi Dan and everyone else!! I'm new to the list but I can support what Dan says about PCSD. In fact, I've found that more of the old frequencies are in use as well.

For example, East 1 (Rincon District) is using 861.05 as the "main frequency" and when it is busy it falls to 862.05 and then 863.05. As I write this, I am able to hear probably 80% of the conversations on East 1, just by sitting on 861.05.

South 1 appears to use 861.00 as the "main frequency" and switches in an order not apprent to me yet of 862.00, 863.00, 864.00 and as a last resort 858.225 and 856.225.

The only problem with the fall back frequencies that I have seen is they are on them and you aren't because you are listening to whatever else took over the "main frequency." I have had to scan to continue with the conversation. Not a really bad problem yet, but the potential to miss traffic is there.

PROGRAM those old frequencies back in there.

I also made some observations that may help some ....
I have three different scanners and have achieved varying results:
Radio Shack PRO-46 - Can't pick up the frequencies - possibly bad radio
Radio Shack PRO-91 - Picks up the frequencies, but I can't search that well because of noise also found on the frequencies. Not able to squelch out all sounds.
Radio Shack PRO-2006 - Picks up and scans with no problems as long as sound squelch button is activated. This is what I am using to find active freqs.

Having said that I might have a problem with my PRO-46, does anyone have a source other than Radio Shack that can handle what appears to be a short in the radio?

Thanks
John

35. PCSD Still having Radio Probs

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 1999-12-27 18:17:49 UTC
From: FLANO
Topic: 35 Message: 35

I found that plugging in the old EDACs frequencies also reveals that someone is still using the old radios. Unfortunately, I can not decode EDACs trunking, so I don't know who it is.

East 2 might be on a "main frequency" of 860.1 with the following following associated frequencies...857.10, 862, 863, and 864. I just followed my deputy around on these frequencies talking with her sarge.

The hand helds seem to have more transmit/receive problems than the mobile radios in the cars.

Hope this helps,

John

36. Security Companies, Chandler PD & MCSO

From: RavenFalls@xxx.xxx
Topic: 36 Message: 36

Hello,

Lastnight I was in Tempe and tried to listen to Chandler PD with my 245 and it never locked onto the data channel, also tried listening to the frequencies conventionally and could hear the data channel. I programed in the freq's that are in the SWFD so I know they are right I hope! Does Chandler run low power?

Does anyone have the frequencies for Pedus Security or Safeguard Security? The frequencies listed in the SWFD are no longer active trunked systems.

Anyone know what part of the Maricopa County System Protective Services is on?

Also MCSO is going to a trunked system soon, anyone know anything about it? I hear its going to be digital as well as Tempe PD is going digital.

Thx,

Joe

>Chandler run low power?

Hi Joe!

In my experience, Chandler PD's system works great in Chandler and to the South, but not so hot to the North up into Tempe. I can "barely" get the system from Tempe, and generally need my good Max800 antenna to do so. Generally, trunk tracking a 800 system requires slightly better signal strength than simply hearing it conventional, which sometimes explains why you can hear weak signals in conventional mode but cannot trunk track the system.

> Does anyone have the frequencies for Pedus Security or Safeguard Security?
>The frequencies listed in the SWFD are no longer active trunked systems.

Yep, those will be removed in the next edition of the SWFD book. The system they used to lease was purchase by Nextel, like so many others around the nation. We've yet to find their new system. Let the group know if you do!

> Anyone know what part of the Maricopa County System Protective Services is
>on?

They use the Maricopa County 800 system (see SWFD, under Maricopa County, Thompson Peak System #1). By the way, word has it the City of Scottsdale has purchased what was listed as "System #1" for Thompson Peak under Maricopa County. Nothing but Scottsdale City agencies (and others the city authorizes) are on System #1. All Maricopa County traffic that is trunked on Thompson Peak is now strictly on what is shown as "System #2". I have had excellent results trunk tracking this system, as Type II (E2), and have found the primary talkgroups for Protective Services. I will post them next week when I return home from vacation, unless anyone else can reply with the talkgroups before then.

> Also MCSO is going to a trunked system soon, anyone know anything about it?
>I hear its going to be digital as well as Tempe PD is going digital.

I've heard nothing about digital, but do know that MCSO will be moving to the county's analog 800 system soon. Unknown when. The system is also being upgraded, with new small "gap filler" sites (generally 3-5 frequencies on each, stuck in areas where the county's current system has dead or weak

spots) coming on line prior to the Sheriff moving to the system.
Checked with some reliable acquaintances at Tempe and they laughed off the idea of Tempe going digital, saying they just upgraded the city's system to Type II and reprogrammed all radio so that the existing infrastructure and design will last for many years to come without any more upgrades for quite some time. Guess we'll see if anything happens.

Dan

Topic: 39 Message: 39

On new years eve, the Tucson Police helicopter, AIR 1, was broadcasting video to the command center.
I heard them reference the freq. of 2492. So, I assume the video was being broadcasted on the 2.4Ghz s-band.
Does anyone know much about this?
Are they using wide band FM, or AM?
I have seen info of taking the AOR AR5000's 10.7Mhz IF output and converting it for TV use.
Does anyone know of other receivers that would work on this band?
Maybe the Wavecomm JR.? (but I am not sure of its coverage)

Also, I noticed that MANTIS is licensed in the range too. Anyone know about that?
Video bugs, audio bugs, maybe?

Hi Dan,

Thx for the info and I have scanned the Thompson Pk 800 system using Type II and it works well even for Scottsdale PD. How can I find trunked systems to scan to find companies etc. Will MCSO use the White Tanks & Thompson Pk county 800 system as well as some filler sites? I heard that Tempe is planning to scramble there traffic, but I think that would be too expensive, unless they have alot of money to invest? I will search for the talk groups for Protective Services.

Thx,

Joe

Click here: IPN - The Incident Page Network (http://www.incidentpage.com/) Hello, This is a new incident paging service that pages incidents to your pager or email. There are areas to page for Maricopa, Pima, Pinal & Yuma counties, also a national working pursuit. The service is free is you sign up as a dispatcher but a small monthly fee if you dont sign up as a dispatcher. To qualify to be a dispatcher each person needs to page out about 3 incidents a month. I hope this service grows and more people here in Az join it. Joe

45. Old GE system.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-01-06 12:37:40 UTC
From: ka7pcj@juno.com
Topic: 45 Message: 45

Morning gang,
I have a question for the group; 865.100 was the
'default' channel for the PCSO's radio phone patch. On the new Johnson
system, is there an equivalent frequency?

Thanks,

Donnie

Click here: IPN - The Incident Page Network (http://www.incidentpage.com/) I know there is another service here in Az, which I hear is good. This is a service that started a few months ago and is nationwide with service for most parts of the country and canada. Also someone can subscribe to 3-5 areas for free or be a dispatcher and receive free service. Its new and I have been happy with it. The service actually started in San Diego but expanded nationwide. Take Care, Joe

Goodyear PD operates on three main channels 1 856.9625 Dispatch and most operations 2 855.4875 Car to car (simplex) and also used by City of Goodyear public works 3 855.9625 Car to car (repeater) also used for various functions & etc. Was the old Goodyear FD Channel. Not sure what "task force" you are referring to. When the Westside Task Force was in operation that targeted gang and drug activity, I believe they were using MCSO Ch4 460.200. I haven't heard any recent type of task force activity out here thou. --- Charles Simmont icp509@... Hello,

Tonight while scanning the Maricopa County 800 jail system listed in the SWFD i heard a rebroadcast transmission of emergency traffic which i also heard on MCSO Ch1 simultaneously. I heard no other MCSO traffic on that system or the other two systems they have. The ID on 800 was 8336 i think? Listening to it as E1-P10

Dan,

Have you heard anything about the Maricopa County Jail System rebroadcasting emergency traffic for MCSO? Thats all I heard on the system is a rebroadcast and no other MCSO traffic. I can only listen to it when I am in Phx since I am unable to hear that county system at home.

Donnie :)

I too am interested and have been working on finding "Default" frequencies for the new PCSD radios. So far, I have only been lucky enough to catch a dial tone or phone ring on two frequencies..... 860.10 and 862.00.

I've found that I can hear most of channel one traffic for East, North and South if I have just three freqs punched in. They are 861.05, 862.05 and 863.05. I just press my scan button to follow, if the conversation loses out to a different channel. It's not perfect, but, so far I have been pretty successful in listening to my wife and her day......<GRIN>.

I've also found that there is a slight scanner defeat, unless you are able to squelch out the blank noise. Something else is transmitting on these frequencies and my portable scanner will stay locked on it, even if the conversation is gone. On my base scanner, it's no problem, I just keep the sound squelch on and I have to press my scan button a whole lot less.....

I have come up with a few other observations, but they are still tweaking the radios.....so I am not sure what will remain true and not. So far, those three freqs hold true for me....

Good Luck,
John

Yes, very possible. The first transmissions I heard were wide open, then one of the users warned that "some radios are operating in the clear", then they became a lot more cognizant of what they said. Interesting stuff. Hello,

Any idea what ID# 700-12 is on the Maricopa Thompson Pk #1 system is. I hear a dispatcher giving a 28/29 on that chanell? When did Maricopa County split there system? When i scanned both system #1 & system #2 together i hear everything and i didnt think the 245 would do two systems at once and catch everything.

From: Dan Rollman
Topic: 73 Message: 73

Dear Fellow Scanner Hobbyists,

Scannerstuff, the maker of the Southwest Frequency Directory books, currently has the new 6th Edition of the SWFD book in the works! In order to make this book the most accurate and comprehensive local scanner guide ever, we need your help! If you have information to provide that you don't see in the 5th Edition of SWFD, including frequencies, radio codes, area coverage info, unit designators, and TrunkTracker talkgroups, please email me within the next week with that information in order to have it included in the upcoming book. This new 6th Edition will likely be available in April, but we need to complete it soon in order to get it to the printer. MAJOR substantial contributors of new information are often entitled to discounted copies of the new books, and in rare cases, even a complimentary copy. Anyone who contributes useful information is entitled to have their name added to the list of contributors in the front of the book, with their permission.

As many of you may know, SWFD books are used by professionals on the ground as well as in local police, medical, and media helicopters. But most importantly, the books have become a valuable resource for us regular scanner hobbyists. We'd like to keep up the tradition of accuracy and completeness.

Again, the deadline for new and updated scanner radio information is nearing, and the SWFD volunteer coordinators and I would like to get as much last minute info from our fellow scanner listeners as possible. You may reply back via email, fax information to (978) 383-8950, or snail mail to the address below. Thanks very much for your help! It is you the readers that have made the Southwest Frequency Directory line of scanner information resources as popular and reliable as they are.

Sincerely,
Dan Rollman

Date: 2000-02-05 02:01:53 UTC
From: kb7mib@hotmail.com
Topic: 74 Message: 74

These are some talk-groups that I have figured out on the White Tanks-Thompson Peak linked system:

48336 Sun City West Sheriff's Posse Ch.1 (Where is the Sun City Posse?)
48368 Sun City West Sheriff's Posse Ch.2

354xx (Range) American Red Cross "Dial-A-Ride" Vans (Multiple Talk-Groups)
356xx (Range) American Red Cross "Dial-A-Ride" Vans (Multiple Talk Groups)

12816 Animal Control Ch.1 West
12848 Animal Control Ch.2 East
12880 Animal Control Ch.3
Animal Control Ch.4 > 866.1750 conventional?

48 County Elections Department (Active during last elections)

46896 County Medical Examiners Office

11248 "Durango Command" (Part of the Jail Complex?)

61936 "IC2"

Does this info help to fill in some holes for anyone?

John.

Hi,

How about the frequencies used for the White Thanks-Thompson Peak linked
system? That will help 'fill in the holes' for me.

Thanks!

Paul :-)

77. White Tanks-Thompson Peak Frequencies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-02-06 10:11:59 UTC
From: kb7mib@hotmail.com
Topic: 77 Message: 77

Here you go,in frequency order:

White Tanks
866.1250
866.2250 (Phone Patch heard)
867.1375
867.1875
867.2375(Phone Patch heard)
867.4375
867.7375
867.8375
868.0375
868.1375
868.5375
868.7750
868.8750
868.9250

Thompson Peak #2
866.1500
866.2000 (Phone Patch heard)
866.2500
867.1500
867.2125
867.2875
867.7500
867.8125
868.6500
868.8000
868.8500

If I have omitted any frequencies,anyone is free to correct me. The callsign is KNNN 306. There are also systems with this callsign in Gila Bend,on Yarnell Hill,and on Mt. Ord and Bronco Butte. Perhaps extensions of this system. I have those frequencis as well.

They are both Type 2 systems,and all talk-groups seem to be the same on both sytems. Perhaps a Smart-Zone (TM) type of system? At the very least,they are linked together.

Ref: The Sun City Posse. I know where they are located geographically,I live in Peoria,myself. I was wondering what frequencies they operate on now. The list in the SWFD 5.1 doesn't work for me. No data channel can be heard here.
Can anyone help?

Another question or two:Is the Jail system a Type 2 system,or a Type 1 system? If it is a Type 1 system,what is the correct Fleet Map for it? Has the Scottsdale system gone to a Type 2 system,or is it still a Type 1 Hybrid?

John.

From: GreyFox001@aol.com
Topic: 80 Message: 80

John (KB7MIB):

I would like to thank you for the frequencies for both of the systems. It was good to see that you chose to answer my request, as I had asked this information a while back without any response.

For only 2 trips or so to visit my folks in Peoria during the winter, I hardly find it worthwhile to purchase the scanner books, etc. that others seem to have.

Thanks.

From: schmich@azstarnet.com
Topic: 81 Message: 81

(I gotta remember not to hit the return key after the subject line)
Dan, do you have a favorite radio shop in Tucson and/or Phoenix?
I'm looking for mobile antennas. Rich Wells site does a great job
about handhelds and bases but he hasn't addressed mobiles yet.
BTW, a while ago I asked you about MUSD freqs. 860.4375 is definately
the school buses but it is not part of the Marana PD system. It does
sound like it's part of a trunking system; musical tones before each
transmission, high pitched whine during tx, hangs on after mic key is
released, but I can't find control freq and don't know what type
system it would be. Also, 151.265 and 155.940 must be part of NW Fire,
I heard them today talking about engine some number getting fuel on
Ina Rd.

Here is a list filling in a few blanks. Not sure if everything is correct but the best I could think of where each talkgroup goes according to what open talkgroups I had for departments. The Probation ones might be switched but not sure. Hard to tell which is Adult & Juv. Also filled in a few blanks from what other members have given as talkgroups and what they heard.

Adult Probation: # 18096
18000
18032
17808
Animal Control #1 12816 West
Animal Control #2 12848 East
Animal Control #3 12880
Building Inspectors # 10960
10928
County Elections # 48
County Jail # ?
County Office # 46896
County Parks # 688 Main
560 North Tac
656 Operations West
652 ?
624 C-C
County Shops # 11856
DOT # 9968
Flood Control? # 176
IC2 # 61936
Juv Probation A 17904
B 17840
E 18128
MCSO Hot Traffic # 8336
Medical Examiners # 46896
Phone Patch # 6272
10720
57648?
25600
47872 probation
Protective Services # 11248
Red Cross # 35408
35536
35600
35440
35504
Sun City Sheriff's Posse #1 48336
#2 48368

Suprise PD A 52336
B 52240
Suprise Sanitation # 52784

Unkown ID's #1168 # 10000 # 10928 # 11984 # 12368

52176 # 52272 # 52688 # 13328 # 10896 # 10992 # 1200 # 18128

84. Surprise Talk Groups

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-02-12 04:47:56 UTC
From: kb7mib@hotmail.com
Topic: 84 Message: 84

Here's a list of City of Surprise talkgroup id's that I have:

Police/Fire
52336 Ch.1 Main
52368 Ch.2 Chase
52432 Ch.3 General Investigations
52400 Ch.4 Supervisors
52496 Ch.5 City-wide
52528 Ch.6 Fire Dispatch (Old,SFD is now under Phoenix Alarm)
52176 Ch.7 Fire Tactical
52464 SWAT?

City Goverment
52656 ?
52688 ?
52752 ?
52784 Sanitation (Trash Trucks)

I would suspect that any talkgroups in the 52xxx range would be for the City of Surprise. You can hear them on either the White Tanks,or Thompson Peak #2 system.

It is very likely,that SFD still has the 800 Mhz radios in their apparatus. I know that both Glendale and Peoria FD apparatus carry PD radios. (I've seen the radios,and/or heard them on PD channels.) And of course Phoenix FD has PD channels on the "B" side of their portables. How often SFD communicates with SPD,or any other city department,is unknown.

Donnie,

Log in to the Onelist website and check the ArizonaScanner list file area.
You'll find a nice one-page frequency list of most of the "basic" and
important public safety frequencies for the whole Phoenix area there...

Hey there group,

My name is Steve Isoldi, I am administrator for Incident Page Network's Arizona Chapter. You guys have a great forum , I just started browsing the messages here today, good stuff.

I have a question I am sure that one of you guys will know the answer to. I have heard a new code on DPS of a "964". I know its a variation of 96# series of codes, but specifically, what is it?

Also, I have heard Rural Metro on 453.1125, sounds like N. Valley stuff?

Also, if anyone does not know about Incident Page Network, its a fairly new service, and the Arizona Chapter is about a month or so old. We are always looking for some experienced monitors like yourself's to make it even better,

The url is: http://www.incidentpage.net/

We also have a onelist group also for the IPN-Arizona Dispatchers,

Thanks in advance for any info reply,

Take Care,

Steven K. Isoldi ,IPN-ARI000

Hi Steve,
A 964 is a traffic accident with unknown injuries.

>Also, if anyone does not know about Incident Page Network, its a
>fairly new service, and the Arizona Chapter is about a month or so
>old. We are always looking for some experienced monitors like
>yourself's to make it even better,

On the same note, if anyone does not know about Incident Command Page, a relatively more extensive and established service, going on 5 years old.... ICP is also constantly looking for additional dispatchers ("monitors") and also regular members to our club. ICP currently has many, many dispatchers covering all parts of the valley as well as other parts of the state. Our coverage of incidents continues to improve, to the point where ICP currently misses few major incidents (working fires, major 962's, shootings, hostage/barricade situations, 998/999, etc.) In recent scanner events, ICP had great coverage of yesterdays major 962's in Sun City West (car through several pedestrians, 1 DOA), as well as the 19th Avenue 962 yesterday afternoon that claimed the life of a mother and sent her children and other victims to the hospital in serious condition, and the major fire at St Johns School on the Gila River reservation. ICP was also paging information on the tragic death of Officer Skip Fink to our membership within minutes of its occurrence as the situation on US-60 was still progressing. ICP Pagers are used extensively by Phoenix's TV News Stations news desks and photographers, as well as the local newspapers, thanks to our clubs reliability and accuracy. We use a two-way radio system and mobile "RIM" 2-way pagers to facilitate mobile paging operations and make our club even more fun for its members.

ICP also holds a regular get-together of local scanner enthusiasts, which meets the last Saturday of each month at 6pm at the Fudruckers Restaurant, Highland Avenue just East of I-17 in Central Phoenix. ALL scanner listeners are welcome to attend to chat with other hobbyists and the open exchange of radio information. Whether you are a ICP club member or not, we'd love to see you there!

Please do also check out our clubs web page:
http://www.axtek.com/n7qyk/icp/

And feel free to email me directly if I can answer any questions on ICP or the local scanner meetings.

Hi Carl!

I don't know what exactly the term means or why they chose it, but the connectors are community service units that basically handle "public assist" and "motorist assist" type calls. They are single-person units and are often dispatched for things like stalled vehicles, etc.

Hey Joe,
I have been hearing the same thing. Still can't find any other talkgroup
for MCSO. I tried to match 8336 up with a UHF Channel as if it were a
simulcast with no luck. Seems the units on this talkgroup are on it only
and not transmitting on UHF as well. The designators above and the couple
others I've heard are not regular patrol designators, so its possible this
is some other divisions migrating to the system. I've always heard the
Fugitive Task Force, for example, uses the 800 system.

Hi Don,
Sort of. Their activities are different in many ways. First, the connectors don't have a clinical psychologist on board (from what I've been told) unlike Phoenix's AR's and Care7, so they do try and help with emotional issues but not quite the same way. Second, they handle more community service type things that Phoenix's AR's, like the mentioned "motorist assist" pushing broken down cars out of the road and things like that Phoenix PD generally handles. So they are similar in the community service perspective (with the addition of some additional duties) but not quite comparable with regard to emotional crisis needs. You did bring up a good point I had forgotten, and that is that they help out ALOT with the community service needs on fires and major MVA's.

Dan

I am led to believe that the AR vans actually use MSW interns from ASU and
other masters programs..........and they will never work as good as TERROS
used to be..........my two cents

Hi all,
As a newcomer to this group, could you please note the
cities you are talking about.
I haven't a clue where the Thompson PK System is....
Tuscon??
Thanks,
Temp Berdan

Hey Don,
I stand corrected. The units I was getting confused with was "connector"
units and "service" trucks. The service trucks handle the public assist
calls. The connector trucks handle the same kind of emotional crisis calls
as AR Vans and Care-7, but they still say "are not exactly like AR Vans".
Not sure exactly what that means, but Don is along the right lines.

Dan

Thanks SO much for the commercial frequencies that were posted on here. When I was in the PHX area back in December I posted a request for them, without any luck of a response. However, thanks to your kind and much appreciated efforts, I will have them for my next visit.

Take care and if some of you have additional, please post.

From: Davey Gravy
Topic: 110 Message: 110

Does anyone know of any local area or on site systems I see others on file with the FCC but don't recieve them well enough to trunk track them long enough to figure out what fleet maps to use?

This one I call "The Durango Complex"
KNNN305
866.5625
867.1625
867.3625
867.7625
867.8625
Are there any more I am missing?

This one I call "Civic Center"
KNIH427
855.9875
856.2375
857.2375
857.2625
858.2625
859.2625
860.2625
Are there any freq's I may have missed?

Oh and by the way the Tempe system still has type I talkgroups in block #3

Anyone know what the size code might be for that Block #3? I too have found Type I talkgroups in Block 3 but have been unable to successfully find what size code should be used for perfect performance.

I have been using S-4 size code and it seems to work good I have not monitored that block long enough to see more than 16 talkgroups and s-4 is the typical size for a small system user like Tempe's but I have been suprised by them before and wouldn't put it past them to upgrade thier system or change again.

114. Guest Speaker at Radio Society of Tucson meeting

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-10 04:01:43 UTC
From: Keith Schlottman, CPA
Topic: 114 Message: 114

Hello all, tomorrow night the Radio Society of Tucson will be having its monthly meeting at the Tucson Racquet Club.

Our special guest speaker for the meeting will be Dan Rollman, editor of the Southwest Frequency Directory and publisher of ScannerStuff software. Those of you on the list already know that Dan is an expert in scanning. This is a great opportunity to meet him and learn something new.

You do not have to be an RST member to attend and the meeting is free. The meeting will be held at 7:30 p.m. at the Tucson Racquet Club. For more information about the club, a copy of our latest newsletter, and a map with directions to the meeting site, visit our web site at:

http://www.hamsrus.com/rst/rst.html

Here is a tentative list of topics for Dan's talk:

- Tucson area public safety agencies and their radio systems
- Dispatch Centers (who dispatches for who)
- How to's of Trunked Monitoring (Marana PD, Pima SO, etc.)
- Future of area radio systems (and future scanners)
- How to scan around Tucson (includes bank suggestions)
- No scanner? How you can best use your wide-receive HT for public safety monitoring
- Overview of Southwest Frequency Directory layout and suggested applications

You don't want to miss this one. See you there!

I would suggest the one-page "Quick Reference" sheet to Phoenix Valley frequencies, downloadable from this lists website (in the files area) at onelist.com. It contains pretty much all the basic frequencies you'd need to get by, monitoring police, fire, EMS, medical helicopters, etc.

From: John Guetherman
Topic: 117 Message: 117

I can monitor the Sun City West Posse on the White Tanks/Thompson Peak systems,but I am unable to monitor the Sun City Posse on the system that is listed in the frequency directory. (Page Maricopa-16,in the 5.1 edition.) No data channel is heard. Does anyone have an updated listing of where they operate? I live in Peoria,only a mile from Sun City,so I should be able to hear a data channel,if what is currently listed is correct. They're not still on low-band,are they?

Sincerly,John H. Guetherman,KB7MIB/KAZ7FA/KAE7927

I've checked one-list myself but didn't find much for police for Prescott
and Chino Valley area.

The old list I do have has;
Chino as 155.760, but I am sure they have some more frequencies.

Anyone have any suggestions?

Notes from old, old list;
Prescott PD - 155.250, 155.550, 155.730, 154.800, 153.860
Prescott Vly. PD - 155.025, 155.865
AZ DPS - 460.025, 460.225, 460.325, 460.425
Flagstaff Dispatch 481.825

Thanks. Stoker1

John,
They leased, for a time, a business SMR system. They have since migrated to the County's 800 system that you are hearing them on.
[1] Primary - County TRS Sun City TG: 48336 Maricopa
[2] Alternate - County TRS Sun City TG: 48368 Maricopa

If you are not able to get a data channel on those frequencies anymore, it is likely that they sold to Nextel and brought that old system down. Doesn't much matter since we've been able to find them on the county system.

There's their channels and talkgroups that I am aware of. This info will be reflected in the new edition of SWFD (6th Edition) coming out next month.

Enjoy!

Dan

Hi Dan,

The 48336/48368 id's are for the Sun City "West" posse,whch operates off of the county's White Tanks and Thompson Peak #2 sites,and which I can listen too. I'm looking for the Sun City Posse. They're two seperate groups. Station 390 and Station 380,respectively.

If anyone with contacts in the SO can find out,it would be appreciated.

I'll be at the Scottsdale hamfest in the morning,as well.

Sincerly,John H. Guetherman,KB7MIB/KAZ7FA/KAE7927

Hello,

Try listening to MCSO Ch 1 460.050 or Ch 8 159.090 I remember hearing station id's close to those on those channels.

Hi John,
You're right, I goofed. Thanks for clearing that up. Give 451.400 and
853.9875 a listen and see if you find anything there.

Dan

No, noe of the PD or FD's are on Mingus, just YCSO. Most repeaters in the area are on Glassford Hill (Prescott Valley area) or Spruce Mtn and Mount Union (Prescott area).

129. Catalina State Park

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-12 14:16:00 UTC
From: Mark Pagel
Topic: 129 Message: 129

Can anyone verify that the Catalina State Park Rangers are on 159.33?

I have been trying to catch them for about 2 weeks.
The lat and lon given in Percon database for that freq corresponds to
Catalina St Park,
but I have only heard one conversation ("2,000 visitors today") that could
indicate it is a park freq.

Any help appriciated!

Mark in Oro Valley

Hello Dave

I'm the webmaster for the Arizona Repeaters Directory. Today, I just registered a domain name for it, at: www.azrepeaters.net

Hopefully it'll be accessible to you by Thursday. (If not, the mirror site is at : www.angelfire.com/az2/azrepeaters for a short while to come)

The site sorts repeaters by counties, FEATURES online location maps!!! It also includes verifications of repeater activity. The site also has ROBERT's list of VERIFIED SCANNER frequencies. Check it out!

INTERMOUNTAIN COMMUNICATIONS (THE BIG CHEEZE IN RADIO STUFF IN PRESCOTT) ID TRYING TO SELL THE LOCAL AMBULANCE SERVICE AN LTR TRUNKED SYSTEM ON UHF. THE RADIOS ARE STANDARD HX482UT WITH TRUNKED AND STANDARD CAPABILITIES. THE SITE IS CO-LOCATED ON GLASSFORD HILL WITH THE STANDARD UHF SYSTEM. ITS SOLAR POWERED, BTW...

THE FREQS ARE..... 461.3875 452.4375 452.2125 451.9625 451.7875

TALKGROUPS IDENTIFIED SO FAR ARE: 001001 PLUMBING CO; 001002 CONCRETE? COMPANY; 001200 AMBULANCE DEMO RADIOS.

ON MY PR0-92 THIS ONE TRUNKS BETTER THAN THE 800 LTR SYSTEM. THE 800 SYSTEM HAS MANY PHONE PATCHES THAT TEND TO OVERLOAD THE SYSTEM. AND THE -92 WORKS POORLY ON IT.

ALSO NOTED A 5 FREQ POSS. TRUNKED SYSTEM: 861.8875; 862.8875; 863.8875 864.885; 865.8875 WITH A CW ID ON 861.8875 BUT NO CONTROL CHANNEL OR OTHER TRAFFIC.

ANYBODY KNOW OF ANY OTHER TYPE OF SYSTEMS BESIDES LTR IN PRESCOTT?

139. LOW BAND ??'s

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-15 14:15:10 UTC
From: ka7pcj@juno.com
Topic: 139 Message: 139

I was doing some research in regards to the question this weekend about 159.330... I show that as a simplex freq. associated with Az. State Land freqs. There are 3 simplex freqs associated with these folks... 159.240, 159.330, 159.450.... as well as several mtn. top repeaters the outputs being... 151.415, and 151.400... with various PL's throughout their system.... I have found only the 2 rptr's.
During my research I also found that there is a low band freq registered to Az State Land.... 44.76.... could this be some sort of link freq? (rather unusual choice I would say)... anybody have any clues???
And speaking of low band..... the Red Cross, in the Phx area, has a base station license on 47.42, and 3 other base stations (Phx, Mesa & Wickenburg) as wells as a mobile license for 47.62.... anything of interest happening with these 2 freqs????

140. Sun City Posse;Federal Uniformed L.E.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-18 11:55:43 UTC
From: John Guetherman
Topic: 140 Message: 140

I found the Sun City Posse on 853.9875 MHz. They aren't very readable for some reason on my ht here at home. I'm only a mile from Sun City,in the 91st Ave and Peoria Ave area. A lot of times,I appear to be only picking up one side of the conversation. I wonder if that frequency is part of a small trunking system?

I'm looking for info on CONFIRMED clear voice frequencies for federal law enforcement agencies here in the Phoenix area. Especially the uniformed ones:Federal Protective Service Police;Bureau of Land Management Rangers;Border Patrol,(I have 163.725 and 163.775 which use a combination of clear and encrypted);Customs Service;others?. I know most of the big ones,(FBI,DEA,Secret Service,BATF,Marshals),use encryption full time. If anyone knows of any of these agencies that use clear voice at least half the time,I'd appreciate the info. I've done some listening myself with the listings from the directory,but there doesn't seem to be much.

Thanks.

Sincerly,John H. Guetherman,KB7MIB/KAE7927/KAZ7FA

I monitor BP in the Phoenix area and along the I-10 corridor on both
163.775 and 163.725 consistently.
If anyone comes up with other fed freqs of interest, please do post the
here for all of us! They are generally some of the hardest frequencies to
come by.

Dan

In regards to the Sherriff's posse in Sun City. They do indeed operate on a rather large trunked system. I dont have the particulars with me, but If I recall they are in the Southwest Frequency Directory, or Dan should have them. Hope that helps

I think someone else mentioned that they were found on 853.9875. I believe
I had heard a while back that they were having difficult with the trunked
system they were leasing. This new conventional frequency makes a lot of
sense too, since they could just keep the existing radios and have them
reprogrammed.

I read in the Arizona Republic newspaper yesterday and this morning,that the U.S. Marines are planning an urban warfare training exercise near downtown Phoenix this evening,7pm-11pm. And that they have been doing exercise's in Mesa and Goodyear recently. Does anyone have any idea what frequencies they are using,or may use? (Assuming the Phoenix allows it to go on,due to concerns about homeless Vietnam-era vets in the area,who may experience flashbacks,due to post-traumatic stress syndrome.)

I won't be able to do much listening,as I have to be at work by 9pm,but I thought it might be interesting to hear,if I can at this distance. I may only be able to hear the helicopters' frequencies.

149. Digital Radio

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-23 19:34:48 UTC
From: Carl Maness
Topic: 149 Message: 149

Yesterday's AZ Republic had an article about the Mesa city council buying $15M worth of Motorola 800Mhz public safety digital trunked system stuff with $8M more coming soon and the city of Phoenix jumping in to create a "valleywide digital network" ready by 2002.

Now, I'm somewhat ignorant when it comes to digital, so I thought maybe I could start a thread here and possibly enlighten myself and others about the future of our hobby.

So, with that said, I'll ask some questions:

o Is 2002 a realistic date?

o FD's in the PHX area still seem to favor their 2 meter frequencies, are they expected to migrate as well?

o What other valley agencies are expected to go digital? County? State?

o Encryption. Based on other US cities digital networks what can we expect?

o When might we see a digital-ready scanner? From whom?

o As major consumers of scanner traffic, does anybody know what the news media's reaction to all of this is? Are there plans to simulcast on analog frequencies?

o Before trunking scanners were available, I knew of some people who bought Motorola radios and had them programmed (receive only) for trunked systems. Is this an option with digital? Cost?

Thanks in advance for your replies. Carl N7UZP

Hello,

DPS does not plan to goto 800. The state just invested in a statewide UHF MDT network that is supposed to work everywhere and they know that 800 does not work in canyons etc. The mobile units that are rural, D12, D8, D14 etc put out about 150 watts and work pretty well. Federal BLM, Forest service should stay VHF since 800 wouldnt work well.

I heard that Tempe PD "might" go digital but the swat team has encryption on their channel. Tempe PD still has a conventional channel which is used for phone patches.

Tempe PD & Scottsdale PD can simulcast onto the vhf/uhf interagency network on 155.475/460.375 to talk to other agencies. Chandler PD used 154.280. Not sure what the county system will use.

Hope this helps a little,

Joe

As for the question: When will digital scanners come out.
The answer is: Never ..... unless the federal law prohibiting them is changed, which, in MHO, will never happen.

>From: Carl Maness <cmaness@...>
>So, with that said, I'll ask some questions:
>
>o Is 2002 a realistic date?

Probably. Mesa already has several 800 MHz frequencies, with at least 3 of them in use as conventional for surveillance and investigative uses. Phoenix has licensed 63 800 MHz frequencies in the past year, indicating they are moving that way also. Though it took nearly ten years of saying "next year, next year!" it seems they are both finally making some progress. Though it has been held in the past year or so that the Phoenix system would be a simple analog, Type II Motorola trunked system (initially anyway). Doesn't mean it can't be upgraded to be APCO-25 digital.

>o FD's in the PHX area still seem to favor their 2 meter
>frequencies, are
>they expected to migrate as well?

Who knows. In my estimation, Mesa/Gilbert FD's are more likely to join a local Mesa 800 system, than the whole Phoenix dispatch system is to switch to 800. Cost will certainly be an issue for some of the smaller members. Putting rural areas of Goodyear, Daisy Mountain, Surprise, etc. on an trunked system and expecting to hear a call from a firefighter down in the basement is a tricky trial-and-error process. No doubt the fire agencies will migrate someday, I just have reservations that Phoenix agencies will do it immediately when the system is up, as PD's usually do.

>o What other valley agencies are expected to go digital? County? State?

Who knows. If they build a "Valleywide" network of some type, no clue. Theoretically eventually all systems will be digital. I suppose in that sense it is kind of like in the early 70's asking what agencies will go to VHF or UHF. By the 1990's, pretty much everyone in Arizona had. It was an inevitable technological transition. Many of held that MCSO will be going digital-trunked any day now. Though myself and other members of this list have found MCSO traffic on the systems, we've never heard digital (that I know of). But MCSO is certainly an option.

>o Encryption. Based on other US cities digital networks what can we
>expect?

Not much. It's expensive. Encryption is rare, with the exception of specific units that require additional security. But who knows. Stranger things have happened, right? Douglas, Arizona PD has been Astro-Digital on VHF for several years now. If that's not evidence that some agencies can do some weird things, I don't know what is. :)

>o When might we see a digital-ready scanner? From whom?

Most "in the know" theorize by next year we should have some type of digital-scanner. Uniden is rumored to already be working hard on a model. Course we all know how long it took to see a TrunkTracker on the shelf after Uniden was said to be building one. By the way, as I now understand it, digital scanners ARE completely legal at this time. It was once thought that they would be "decoding" and therefor in violation of ECPA, but this is not the case under the pretenses of the "expectation of privacy" rules and a few others. There is NO laws against monitoring digital radio traffic. Scanners capable of monitoring encrypted transmissions is what you will never see. And APCO-25 will make it much easier for digital scanners development.

>o As major consumers of scanner traffic, does anybody know what the news
>media's reaction to all of this is? Are there plans to simulcast on analog
>frequencies?

News media has never been left out of the loop. It's not good business sense on the PD's side. Hobbyists are the ones who get left out. If somehow digital systems beat a digital scanner to Phoenix, the media will be allowed the equipment they need. It's worked that way in every city I know of that has gone full-digital, including Memphis, Baltimore, and Honolulu. Even prior to EDACS scanners, I know of at least one news desk in Tucson who's Pima County SO mobile radio mounted on the news desk I personally toyed with. Guess who programmed it?

>o Before trunking scanners were available, I knew of some people who
>bought
>Motorola radios and had them programmed (receive only) for trunked systems.
>Is this an option with digital? Cost?

Not sure. I'd think so, if they aren't encrypted. Anyone else have info on that?

By the way, Joe mentioned that Tempe PD SWAT has encryption on their radios. I've listened to some pretty incredible things on Tempe ChJ and ChK (SEU talkgroups) and have never heard any encryption on the system. Joe, have you heard encryption on the system, or just that they have capabilities?

Thanks for starting the thread, Carl. It's a great topic!

From: Dan Rollman
Topic: 150 Message: 153

Here's the article Carl referred to, care of the Republic.

POLICE, FIREFIGHTERS GETTING
STATE-OF-ART RADIO SYSTEM

The city is buying a state-of-the-art $15 million digital
radio system for its police
and firefighters.

''It's a precedent-setting system,'' Mayor Wayne Brown said.

The new higher-frequency system will let police officers
and firefighters keep in
touch with their dispatchers as they roam the Valley.

It also will handle more radios with fewer frequencies and
will help police officers
and dispatchers talk in private to prevent crooks from
eavesdropping.

Police officers and firefighters often can't use their
portable or car radios to talk
to their own dispatchers once they stray too far from
their own city limits
because of outdated technology.

The council on Monday approved a contract to buy the heart
of a digital 800
MHz trunked radio system from Motorola. Later it will need
to spend about $8
million to replace all the city's public safety radios,
said Don Pfohl, Mesa's
communications director.

Phoenix is expected to buy a similar system this year, and
both systems are
supposed to be operating in July 2002 to form the core of
a new digital
Valley-wide network.

Is there anything in Pima County I can listen to from Chandler?

Any Trunked or Analog? I used to pick up the older trunked system a few years back but gave up trying to monitor over the tailend tones. But now I have a Trunker2!! I was wondering if ANYTHING can be monitored with the 245.

155. SWFD 6th Edition Available!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-24 01:38:13 UTC
From: Dan Rollman
Topic: 155 Message: 155

Dear Scanner Hobbyists;

On behalf of Scannerstuff, I am excited to announce the release of the new 6th Edition of the Southwest Frequency Directory (SWFD). The new book has grown to over 400 pages, and now covers much of the Pacific Northwest as well. Several metro areas that Scannerstuff produced small frequency books for have been combined into this one, large directory. This single updated publication now covers all of Arizona, the Salt Lake City metro area, the Portland (Tri-County) area as well as Eugene, all of Western Washington state including Seattle/Tacoma, and the metro Las Vegas area. Many of these areas have experienced significant changes in radio systems in the past two years, and many of these changes are noted in detail in this new book. SWFD-6 is sure to be a hit with scanner listeners and communications hobbyists throughout the Southwest and Pacific Northwest!

In addition to the new combination of metro areas in a single, handy resource, for the first time SWFD now also includes travel frequency information for the United States' largest cities outside the Southwest and Pacific Northwest. These include Los Angeles, New York, Boston, Miami, Chicago, and many others. The book continues to include frequencies, channel numbers, trunked talkgroups, radio codes, unit designators, fire station resources, PL tones, and more detailed information than ever! Services covered include public safety, aircraft, recreation, federal government, schools, amateur radio (in some areas), and more!

Click here http://www.scannerstuff.com/soutfreqdiri.html for more info on the new SWFD!

At this time we expect the book to begin shipping no later than April 10th, less than two weeks away! Advance orders will receive immediate shipments once we receive the book from the printer. And for the first time, customers may place an advance order for SWFD-6 directly through Scannerstuff, to save both time and money. Your book will be shipped the same day advance orders from stores go out. In addition to receiving the book just as fast as our authorized dealers, Scannerstuff customers will not be charged shipping or additional sales tax for their order. The suggested retail price of the new directory is $29.99. Scannerstuff will be selling the book directly to customers for $29.99, including Arizona sales tax and shipping for advance orders.

You may place your order now using several methods:

By MAIL: Send a check or money order to:
Scannerstuff, 903 S. Rural Rd, #101-261, Tempe, AZ 85281
Don't forget to include your mail address and email address with your payment.

By CREDIT CARD, right online:
Scannerstuff uses PayPal, the fast, free, and secure method for paying online!
PayPal is a secure, free service that allows individuals to pay others for
items using a credit card, online. To pay by credit card online, simply
reply to this email and type "Credit Card" in the body of the message. Also
include your full name and mailing address in your email reply.
Scannerstuff will process your order the same day, and send you back an
email that will include a link for paying online via credit card.

Again, using either of the above payment methods, your copy of SWFD6 will
be shipped as soon as it is released, no later than April 10th.

Please feel free to contact me by replying to this message if you have
questions about the new 6th Edition Southwest Frequency Directory,
questions about ordering, or if you'd like information on selling SWFD
books in your store or on your website.

Sincerely,
Dan Rollman

Remember, here, that CONVENTIONAL (SIMPLEX) 800 works well here, as the signal need not go all the way to a transmitter/repeater site before being relayed to immediate-area units. That is the way the Portland, OR fire bureau works in bad reception areas.

> have info on that?

It is certainly possible (even legal -- the only stipulation is that you must have the permission of the licensed party to have a transceiver on that frequency). The expense is what is prohibitive to most people in this situation, however. Expect to pay close to $2600 for the radio (unless, of course, you can find a good deal on the correct equipment elsewhere), plus probably a monthly "maintenance fee". Here in Portland, OR, you can do just this for the current Moto-II TRS (We are expected to go to APCO-25 before the end of the year). Just rear up the money for a MTS-2000 (about 2800 with the features and options), programming (75-150 based on radio model), and $100 a month for the "privelege" of having a transmit-inhibited radio on your radio desk.

My 2 cents. I'll go back to lurking now.

joe

Hi Dan,

I will check with a friend that works for Tempe PD and pass the info on. As far as I know they have the capability to do it. I was sure that SEU would use it!! I am unable to rx Tempe from where I live so dont listen but maybe once a week for a few minutes here and there when I am in town.

Is there an 800 mhz mutual aid conventional channel that the local agencies have to talk to eachother on?

Yes, it's referred to as "USA-1" and it's on 866.0125. There are repeaters on this in Phoenix and Tucson. Members of my scanner club and I found out how useful this frequency can be when we monitored a pursuit initiated by Scottsdale PD that went from the City of Scottsdale to South of Tucson, then turned into a barricade situation on I-10, and then the driver shot himself a few hours later. Scottsdale PD remained loud and clear on repeaters on 866.0125 the whole way (had to be in Tucson to hear them in Tucson, but repeated none the less. We just told the Phoenix guys what was going on via the alpha paging system).

159. Digital Radio

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-24 20:44:39 UTC
From: Carl Maness
Topic: 149 Message: 159

Thanks for the many replies.

I am not too worried about hobbyists not being able to get their hands on digital radio receivers, I'm sure that (legalities aside) the technical hurdles are few and that the free market will provide us with many affordable options.

What *does* worry me is encryption. The nicest, most expensive digital radio scanner in the world is going to be useless if the signals are encrypted.

The encryption thing still has me fuzzy. I was under the impression (I may have dreamed this) that the digital radios come -standard- with encryption capability, that it can be enabled or disabled (remotely via software commands) much like tone squelch on analog radios. Obviously, I hope I am wrong and that encryption is an expensive and cumbersome burden, or that if it is used, it is used very rarely for very sensitive traffic. I do know that if my radios had an "ENCRYPT" button on them, I would probably use it.

Carl N7UZP

160. DIGITAL RADIO and SCANNING

Yahoo group: ArizonaScanner (1999 — 2002)

From: ka7pcj@juno.com
Topic: 160 Message: 160

Howdy gang.... man there has been a flurry of activity in regards to this digital topic.... thought I would put my own 2 cents worth in here..... bear with me!
As some of you already know, I am down here in Cochise county, far and away from the metropolitan hubbub of all of this controversy (thank goodness!).... and I also work for a 2-way shop located in Sierra Vista, which deals with most all of the public safety offices here in the county. The shop is primarily a MSS (Motorola Service Shop), but that is only one tool in our tool box. I have the "priveledge" of working with both wide (25 khz channel spacing) and narrow (12.5 khz spacing) systems, as well as a "Moto. Privacy Plus" sytems (800 mhz) and a SmarTrunk II (uhf) system, and soon the Nextel "digital" (iden) system. I also keep the infamous "Douglas PD" system running smoothly.... which was inaccurately reported as an "Astro-Digital on VHF for several years now."... they are not Astro, but they do use digital encryption! So let me shed some light on a few things "as I see them"!
First off, unfortunatly, digital , in my humble opinion, is probably enevitable, although not necessarily the only the only game in town! (APCO 25 is another subject!) And we must remember that digital is inhearently "encrypted".... that is, a string of 1's and 0's are sent through the air in some form of carrier, and reassembled at the recieving end. Currently there some standards, granted they are still "proprieteary", but standards are being developed as we speak. Until such time as an "industry wide standard" is developed (yeah, like that will happen soon!) I dont see "digital ready" scanners being available too soon.
Now then, lets talk "encryption"..... we are all familiar with several forms of "encryption"... simple inversion ("Donald Duck" like voices), Rolling Code inversion ("Donald Duck" voices with a clock pulse heard in the back ground) and the most feard, "Digital" (sounds like someone turned off our squelch!). I have worked with all 3 of these types,and I can tell you from experiance, rolling code works the best in analog radios under most all circumstances however, digital offers the most security, but at a price!... it is far less "forgiving" in an enviroment such as Public Safety. Is it any wonder why Public Safety wants "digital" encryption!
How does all of this affect our hobby.... well, when the dust settles, and the systems become "on line", I believe that the current manufacturers will make "digital ready" scanners, ONLY after a few systems have proven themselves worthy! However, when an agency decides that "digital" aint enough, they want "encryption", well... I believe we will all be srewed!.... There will NEVER be an industry standard for "encryption"!.... So I'm going to sit back, enjoy what we have for now, and recall the days of frustration when "trunking" came into being!

APCO-25 is the already fully-developed and in-place digital standard as I understand it. Perhaps you can find some details to the contrary, but the scanning hobby as a whole has widely agreed that systems like Motorola Astro digital trunked systems are APCO-25 compliant, which is a NON-proprietary open source code. The point of APCO-25 is to make an industry-wide standard, and the experts I've spoken to say that is already in place. If I'm wrong on this, by all means point me to corrected factual info. We're all learning here as we go. :)

Also, while digital does use 1's and 0's and encode, then decode, this data to convert it to voice on the other end, I don't think it is encrypted the way most scanner users think of encryption. Digital radio in the sense of 1's and 0's is no more encrypted than binary computer formats are just because they use 1's and 0's as a foundation for their language. The reason is that there is NO security key with digital. Case in point: Tucson PD use "digital" Astro Sabers on their Ch7-10, the tactical channels. It is digital, but NOT encrypted. I can order an Astro Saber from any one of the hundreds of dealers online, program the Tucson PD CH7 thru 10 frequencies, flip it to digital mode, and bingo: loud and clear conversations. That's because there is no encryption key of sorts. Digital is just a different "mode", not a way of encrypting. This example, at least, I know works, because I've listened to Tucson PD this way before. So, that said, there's little reason why a scanner cannot "mimic" this digital mode that the Astro Saber uses, since no special codes or keys are needed.

TRUE encryption (not just digital mode, but actual encryption) is a different ball game all together. Donnie, you are exactly right here. If and when agencies move to encryption, all bets are off. There is no doubt that even if there were a "standard" of some type for encryption, decoding encrypted transmissions is illegal via the ECPA.

But I reiterate, digital does NOT mean encrypted. It just means a different "mode". A different "type" of transceiver simply requiring a different "type" of scanner receiver.

Fortunately for us, most agencies who switch to digital are not doing so merely to hide their transmissions. Ask the public officials who approved it and signed the checks. Though security may be a small part, most of it lies in the idea of wanting to be "high tech" and "up with the times" and not have "out dated" equipment. Those are the kinds of issues used to get a board of ordinary Joe's to vote to pay millions for a new radio system. Digital radio systems are basically the "next step" in upgrading a local system, security aside. Remember that the Tucson PD Astro example above is a proven example that the security an agency has intentionally buying "encryption" units is just not there with simple, "current technology" digital radios. My humble opinion strikes again. :)

From: Dan Rollman
Topic: 162 Message: 162

The following is a quote form Phil Smally in a message on the "APCO 25" mailing list. Yes, it has its own list. :)
Phil makes a great point (much more clear than I did in my last email calling the difference between analog and digital "modes"). Think of switching from analog to digital as switching from AM to FM. When this switch was made (yes, LAPD was once on 610 AM!) there were very few "FM Scanners". No doubt people at the time said "man, I hope Regency or Electra will come out with an FM scanner!" FM was no more "encrypted" or "secret" or "proprietary" than AM, it was just newer, and the scanner hadn't yet been produced for it. So, well said Phil!

I quote...

"As long as they are (APCO-25), there's hope. On the APCO25 mailing list I asked the members there what they would think of an APCO25 compliant scanner - they loved the idea. Agencies themselves would purchase them to monitor adjacent agencies because they will be much less expensive to purchase and maintain then their transceiver counterparts. This is great news - it saves taxpayer $$$ (any public safety agency will tell you they're hard enough to come by), and encourages other agencies to keep their channels unencrypted, so they can be monitored by their neighbors, who might be able to lend a helping hand now and then..... I see the digital boom as being no worse than the switch from AM to VHF was back in the sixties. In fact, it'll be better than it was then, because there's a real market behind scanners now, unlike there was in the 60's. The technology has advanced so far that a digital scanner really is a walk in the park for these engineers now - anyone who is a signatory for APCO 25 can get the protocols. Once you have that, the rest is easy (relatively speaking)." - Phil Smally

> APCO-25 is the already fully-developed and in-place digital standard as I

APCO-25 is indeed the "defacto standard" for digitally-modulated radio transmissions in the Public Safety field these days. However, be careful about Ma M...

> [...] Motorola Astro digital trunked systems are APCO-25 compliant [...]

Motorola's original ASTRO products *are not* APCO-25 compliant. In fact, they still market both the APCO-25 and the original (although the trade name for it is escaping me right now).

> Also, while digital does use 1's and 0's and encode, then decode,
> this data to convert it to voice on the other end, I don't think it is
> encrypted the way most scanner users think of encryption. Digital radio

As you have said earlier, it is *encoded* but not *encrypted*. Like your quote from Mr. Smalley, you have to remember that AMPLITUDE modulation was *the thing* before FREQUENCY modulation came into play. So the next move is DIGITAL modulation, which is all we are talking about. Saying that digital is encoded because it uses 1s and 0s would have been the same as saying "FM is encoded because you have to process the signal differently than you do for AM".

> Fortunately for us, most agencies who switch to digital are not doing so
> merely to hide their transmissions. Ask the public officials who approved
> it and signed the checks. Though security may be a small part, most of it

> used to get a board of ordinary Joe's to vote to pay millions for a new
> radio system.

And, the edicts from the Federal Communications Commission. Many large metropolitan areas have been told that their Public Safety Radio Licenses will not be renewed unless they reorganize to use less frequency bandwidth. The easiest way to do that is to move to digital modulation.

> Digital radio systems are basically the "next step" in upgrading a local
> system, security aside. Remember that the Tucson PD Astro example
> above is a proven example that the security an agency has intentionally
buying
> "encryption" units is just not there with simple, "current technology"
> digital radios. My humble opinion strikes again. :)

And before someone pipes in and says "but having digital modulation makes it easier to add encryption"....

No it doesn't. Encryption is an expensive option that must be installed on *all units* including base, mobile & portable radio equipment, not to mention the repeaters (yes, there is special hardware that has to be installed there too), and any specialized recording equipment (that most public safety agencies are going to have).

Your right Dan.... just because a signal is digital, it doesnt mean that its encrypted, I think what I was driving at when I stated "And we must remember that digital is inhearently "encrypted"...." was that without the proper equiptment, we are unable to understand what is being said..... and currently, that type of equiptment isnt available (to my knowledge).

>APCO-25 is the already fully-developed and in-place digital >standard as I understand it. Perhaps you can find some details to >the contrary, but the scanning hobby as a whole has widely agreed >that systems like Motorola Astro digital trunked systems are >APCO-25 compliant, which is a NON-proprietary open source >code. I beg to differ with you on a the above statement.... while it's true that APCO 25 does propose "open architecture" and other industry standards, the Motorola ASTRO trunked system is not compliant with your statement.... you cannot use any other radio BUT a Moto. ASTRO on that type of system CURRENTLY... because Moto. holds the patent on that protocol, and until such time as to when they turn over the format (either voluntarily or forced) for other manufactures to produce .... it wont be 100% compliant!
I think we could go round and round on this issue Dan! :)

Donnie,

Seems Joe may have cleared it up in his posting, Donnie. We were both right, in a way. Motorola's "original" Astro products were not APCO-25 compliant, presumably because it was before APCO-25 was as developed as it is now. But Motorola does now sell APCO-25 Astro equipment, according to Joe, that is compliant and uses a more open architecture. While I'm not a tech, this makes sense to me. Both variations exist. One newer than the other.

Nothing like a kind disagreement to both get the list going and get a better understanding of this stuff for all of us! :)

BTW, Thanks for weighing in Joe!

Hi,

I live in Iowa and come down to your neck of the woods to visit my folks when they are down there for the winter.

Cedar Rapids, Iowa, which is about an hour from where I live has gone to a Motorola 800 MHz Astro Digital system. While trunktracking it, I noticed that the majority of the groups come up digital, presumably fire and police. However, I am hearing some regular analog traffic on the system for less sensative depts. How does this work, allowing digital and analog on an Astro system?

Thanks.

Paul

> digital and analog on an Astro system?

When Ma M designed the SmartNet and SmartZone trunked radio systems,
they realized that some agencies that would install their systems
would
eventually upgrade to digital. Since the data channel is already
digital
(it just spits out digital data continuously) it is possible to
handle both
analog and digital voice traffic -- as well as data. (Did you know
that a
regular MTS2000 or similar radio can actually be used as an RF modem
for
a MDT or other data application?) The trunking controller doesn't
care what
is broadcast on a given talkgroup or frequency -- all it does is give
a
channel grant to a group of radios and you can do whatever you want
with it.
But obviously if you don't have a digital radio and someone else does
(and they are trying to talk on your talkgroup) you will have
problems
understanding them.

I don't know for sure that the same thing is possible with GE/EDACS,
but I
would assume that it is.

>greyfox001@... asked:

> How does this work, allowing digital and analog on an Astro >system?
Exactly Joe.... the controllers and/or repeaters dont care what
kind of signal is being passed (analog, digital)... the controller simply
recognizes the comand to "gather my group on the next avail channel
please".... and then the repeater just opens up and the flow begins.
It's also possible that what your hearing Paul, isnt exactly
"digital" per say, but rather an analog signal that has been digitally
encrypted, which is the case here with the Douglas PD..... they run
MTS2000 handhelds (analog radios) and SPECTRA mobiles (again, analog)....
and the individual makes the decision to run "clear" or "encrypted". All
units in the field hear the traffic, regardless of the choice the sender
to go encrypted or clear (as long as the key load isnt corrupted!)

> (Did you know that a regular MTS2000 or similar radio can >actually be
used as an RF modem for a MDT or other data >application?)
Sure.... Moto. has done worse than that though, look at the
KDT480, it uses a MAXAR, at least the 9100 series uses a SPECTRA!

170. Re: [ArizonaScanner] PIMA COUNTY

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-03-26 16:36:00 UTC
From: FLANO
Topic: 170 Message: 170

Hello :)

Yesterday I drove up to Phoenix. I was able to pick-up bits and pieces of Pima County Sheriff's Department as far as Picacho Peak. When I tried again in the area of Casa Grande, I did not hear any radio traffic.

To qualify this a little, I was using my portable scanner and driving my wife's truck. This means that I had only my rubber antenna that comes with the radio. I was not using an external antenna on the truck. I'm sure that I would have gotten a little more range with an external, but I'm not sure how much more.....

As far as the new EF Johnson system that PCSD is using, I have found it far easier to monitor them. I amaze my wife everyday with telling her how her day went, asking why she has to take the patrol car to the shop, etc.

I do this by monitoring three frequencies in scan mode. I have found that it will be location dependant on which freqs to monitor, based upon district and the PCSD antenna used to transmit the traffic.

If you draw a north/south line over the city of Tucson, starting in the area of about the Tucson International Airport, and go east, past the town of Vail, you can listen to most of the Channel one activity on three frequencies. They are 861.05, 862.05, and 863.05. I listen to the frequencies as if they were single channel, not trunked. Of course, you will have to hit the scan button to continue to hear a conversation that you'd like to listen to, but I seem to receive most of the conversation this way. I just follow the voice of the speaker that I am interested in listening to. Sometimes, I get lucky and hear channel two activity as well. I have tried other methods, but this seems to work the best for me.

Sorry for the long reply, but I thought that I would let you know in a little detail.

Have a great day,

John

173. Freq hopping pattern in the Fed band?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-04-03 15:50:58 UTC
From: Tom Kelley N7RPZ
Topic: 173 Message: 173

Hi Everybody

Since last Sept, I've picked up on occasion, what appears to be high sig strength freq hopping, short bursts, centered on some freq surrounded by a "bell curve" of freqs clustered about the center freq--in the 410-420 Fed Band.
First occurrence of such was on Sept. 16th, on the way to Sedona from Phx. About at Bumble Bee, started picking up the pattern -- no change in sig strength all the way to Cordes Junc. Then picked up the pattern in the Sedona area for the rest of the day there. Very high sig strength in the whole area, esp Dry Creek, and Loy Butte areas. Low sig strength in the Boynton Cyn area. The pattern of activity WAS virtually CONTINUOUS that day!

Subsequent visits: Oct, Nov, no activity at all.
Dec, Jan, while visiting Sedona area, listening for the pattern, occurred ONLY ONCE PER trip, even with 8 hrs of monitoring, each such burst only lasted 30-60 seconds.

FCC data says that this band is not authorized for spread spectrum or freq hopping. Anyway, my equip behaves differently when it gets spread spectrum vs. what this pattern is.

Additionally, a scanner enthusiast that I met at C.A.R.L. recently, says it sounds like the same sort of pattern that he's been getting down in the Green Valley and Avra Valley areas of Tucson -- he suspects some sort of DEA ground/air transmissions. Another Ham suggested over-deviated out-of-band splatter from a TV or FM broadcast translator up north (my prob with that is splatter doesn't have high sig strength over large areas)

Here's an example:
1/4/00 at 5:10 PM at crossroads of 89/Dry Creek Rd. in Sedona

411.281 5 hits TOTAL TIME of activity, about 40 seconds.
411.296 25 hits Very high sig strength
411.308 1 hit
411.318 1 hit

I now have an RDF antenna, and an Interceptor, and am looking forward to another expedition north....
--
More Later,
Tom N7RPZ

Hi Tom,
interesting report.
I'll be going to SDZ for two months, shortly, and will do some scanning
and see if I can get some idea of what is going on.

As there is Oak Creek, do you suppose that the appropriate federal
agency might have one of those automatic monitoring devices that sends
frequent data bursts out on an ongoing basis??

I'm sure that they also monitor the Verde River as well.

Get back to you soon.

Temp
In SBA, CA
SDZ soon!!!

splatter doesn't have high sig strength over large areas)

Here's an example:
1/4/00 at 5:10 PM at crossroads of 89/Dry Creek Rd. in Sedona

411.281 5 hits TOTAL TIME of activity, about 40 seconds.
411.296 25 hits Very high sig strength
411.308 1 hit
411.318 1 hit

I now have an RDF antenna, and an Interceptor, and am looking forward to
another expedition north....

175. Freq hopping in the Fed band?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-04-03 19:26:38 UTC
From: Tom Kelley N7RPZ
Topic: 175 Message: 175

Hi Everybody

Since last Sept, I've picked up on occasion, what appears to be high sig strength freq hopping, short bursts, centered on some freq surrounded by a "bell curve" of freqs clustered about the center freq--in the 410-420 Fed Band.
First occurrence of such was on Sept. 16th, on the way to Sedona from Phx. About at Bumble Bee, started picking up the pattern -- no change in sig strength all the way to Cordes Junc. Then picked up the pattern in the Sedona area for the rest of the day there. Very high sig strength in the whole area, esp Dry Creek, and Loy Butte areas. Low sig strength in the Boynton Cyn area. The pattern of activity WAS virtually CONTINUOUS that day!

Subsequent visits: Oct, Nov, no activity at all.
Dec, Jan, while visiting Sedona area, listening for the pattern, occurred ONLY ONCE PER trip, even with 8 hrs of monitoring, each such burst only lasted 30-60 seconds.

FCC data says that this band is not authorized for spread spectrum or freq hopping. Anyway, my equip behaves differently when it gets spread spectrum vs. what this pattern is.

Additionally, a scanner enthusiast that I met at C.A.R.L. recently, says it sounds like the same sort of pattern that he's been getting down in the Green Valley and Avra Valley areas of Tucson -- he suspects some sort of DEA ground/air transmissions. Another Ham suggested over-deviated out-of-band splatter from a TV or FM broadcast translator up north (my prob with that is splatter doesn't have high sig strength over large areas)

Here's an example:
1/4/00 at 5:10 PM at crossroads of 89/Dry Creek Rd. in Sedona

411.281 5 hits TOTAL TIME of activity, about 40 seconds.
411.296 25 hits Very high sig strength
411.308 1 hit
411.318 1 hit

I now have an RDF antenna, and an Interceptor, and am looking forward to another expedition north....

> 73's DONNIE

Donnie,

I'm not that familiar with community repeaters, but here is my low tech approach:

About a month ago, there was a rollover accident in the parking lot (yes, the parking lot) of a business next to the Pointe South Mountain (I work in an adjacent building). Shortly after PD arrives, a whole bunch of "suits" show up in unmarked vans - Pointe Security. With the TV news choppers overhead, I push to get a better look their radios - Moto UHF's.

Using a BC-235 I searched from 466 to 470 Mhz with no antenna attached and found the repeater frequencies I listed. I found the catering frequency the same way, searching 5Mhz lower.

Now, from the roof of my building looking East, I can spy what appears to be 4 UHF repeater antennas on the roof of the Pointe. I believe they are the security, golf course, housekeeping and engineering frequencies.
The transportation channel appears to be used by non-Pointe employees (taxi, airport shuttle, etc.) as well and I think that repeater is off-site somewhere (maybe someone else can jump in here and enlighten us).

Since I only listen to these guys during business hours, the traffic is mostly 99% boredom punctuated by 1% of more boredom, but sometimes there are VIP's and dignitary visits that raise the DEFCON level up a bit.
These frequencies do indeed appear to be shared by lots of other users around the valley, I can find no conventional PL tones so I'm guessing CDCSS?
I have also searched the 800 and 900Mhz business inputs and can find no regular usage, so I'm guessing no trunking for this resort.

Hope this helps

Carl N7UZP

184. Type II or Hybrid?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-04-08 00:19:33 UTC
From: John H. Guetherman
Topic: 184 Message: 184

Hello,

On the Maricopa County White Tanks/Thompson Peak systems,I get a lot of odd-numbered talk group id's for the probation units. That would tell me that they are still using a Type I fleet map,instead of Type II talkgroups. Are these systems wholly Type II or a Hybrid system? If a hybrid,what is the proper fleet map for block 2,which holds the probation talk groups? I've just started using S-12 for that block,and I'll see how it goes. I don't have another trunktracker to compare transmissions though,unless I borrow the one that I bought for my sister,when she lived in Glendale.

Sincerly,John H. Guetherman,KB7MIB/KAE7927/KAZ7FA

Morning folks... the discussion a few weekend ago about DIGITAL transmissions and ENCRYPTION also segwayed into a discussion about APCO and Project 25, and weather or not an APCO 25 scanner was ever gonna be available, which also led to what exactly ARE APCO 25 standards..... well, I have been doing a little bit of research, and I thought I would pass along a couple of web addresses that may help clear up the APCO 25 issues.
The first page explains the standards in a relatively "non-technical" way.... as well as the reasoning behind it and such.

http://www.apcointl.org/project25/information.html

The second page is a pretty in-depth statement of Mr. Robert Fenichel, Member, Association of Public Safety Communications Officials (APCO) International Project 25 Steering Committee, National Communications System, to the Fleet Mobile Comms ?98 Conference, Sydney, Australia, April 28, 1998. On this page is a great deal more information as to ALL of the standards and options regarding this issue

http://apcointl.org/bulletin/bull/99/march/feature4.html.

I hope that everyone gets an opportinuty to read these pages, and maybe we can better understand where the future of our hobby will be going in the future

If it is a true SmartZone system (which I have been lead to believe
from other data circulating on the internet) then it cannot be
hybrid. SmartZone systems are Type II only.

However.... Astro Digital will use odd numbered talkgroups (I can't
remember what the rationalle behind that is right now but will post
when I can remember).

In regards to the "digital" radio system that was written about several weeks ago:

Recently while out covering a new story in mesa, I spoke with the PIO of the Mesa Police Dept about the "digital system". I specifically asked if this radio system would be able to be scanned. Explaining that the recent news article spoke of incryption and digital goodies.

His response to me was "You can hear Tempe cant you? - We are getting the same sort of system". It sounds that perhaps some of the big shots (who think they know what they are doing and saying) have confused the term Trunked and Digital.

I continued to question them about the system and his response was similiar along the lines of "dont you think we have all learned from Seattle" - presumably speaking of a multi million dollar law suit filed against the city by the news media when they tried to go to a secure system.

I can tell you for a fact that the system Mesa is going to put in is not like the one in Tempe. Tempe has a hybrid type IIi system which is all analog. Mesa is going to the Project 25 digital system which as the name states is digital. There is talk that there will be digital trunking scanners in the future but I don't know when. In regards to the other message posted about type II trunking, you can have a hybrid system that does both type 1 and 2. Tempe has been doing that for some time however upgrading to strictly type 2 in the near future.

190. Fwd: [firenet] New Bill

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-04-16 00:52:11 UTC
From: Dan Rollman
Topic: 190 Message: 190

Hey guys,
Here's a forward with a couple links that relate to some new laws that are being discussed, but have not yet been passed. (Remember that the most detrimental laws our hobby has seen have so far been tabled and left to die).

Of particular note I thought was...

"`(1) PRIVACY PROTECTIONS REQUIRED- The Commission shall prescribe regulations, and review and revise such regulations as necessary in response to subsequent changes in technology or behavior, denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of--
`(A) receiving transmissions in the frequencies that are allocated to the domestic cellular radio telecommunications service or the personal
communications service;
`(B) readily being altered to receive transmissions in such frequencies;
`(C) being equipped with decoders that--
`(i) convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service transmissions to analog voice audio; or
`(ii) convert protected paging service transmissions to alphanumeric text; or
`(D) being equipped with devices that otherwise decode encrypted radio transmissions for the purposes of unauthorized interception."

Notice Section C1. - would direct the FCC to not approve devices that convert protected digital transmissions to analog voice audio. Upon first reading this, I thought, hmm, an attempt to prevent digital scanners from ever being created and released for sale? But let's read on...

"`(5) DEFINITIONS- As used in this subsection, the term `protected' means secured by an electronic method that is not published or disclosed except to authorized users, as further defined by Commission regulation.'."

There ya have it. "Protected" would not include APCO-25 digital, because APCO-25 protocol, as we've already established, is pretty much open source. Looks like this particular section is aimed more at encryption and other modes that are not shared. So, it looks like even if this bill did pass, we still wouldn't have much trouble seeing a digital scanner hit the market, once Uniden decides the market share warrants its creation and sale.

Dan

WIRE:04/18/2000 23:29:00 ET
Tour helicopter crashes south of Grand Canyon; seven injured

TUSAYAN, Ariz. (AP) _ A tour helicopter crashed shortly after taking off Tuesday south of Grand Canyon National Park, injuring six German passengers and the pilot, authorities said.
None of the injuries was believed to be life-threatening. Four of the victims were in fair condition and two were in good condition with various back, leg and pelvic injuries, said Keli Openshaw, spokeswoman for Flagstaff Medical Center. Another victim was treated and released.

The Bell 206 Long Ranger helicopter lost power after rising about 300 feet off the ground and came down on airport property, authorities said. Witnesses said it skidded about 50 feet on its belly, leaving a wide skid mark and bending the main rotor.

It was operated by Kenai Helicopters, which operates out of a heliport near the canyon's South Rim. Phone calls to officials with Kenai Helicopters were not returned.

Federal Aviation Administration spokesman Roland Herwig said the 18-year-old helicopter had one prior accident, in 1992, when the helicopter's tailrotor hit the ground at a Hawaiian airport. Herwig said there were injuries, but he had no other details.

Has anyone caught any activity on these frequencies yet? Any idea what the setup will be,as far as how many systems,talkgroups,etc? I had read elsewhere,that testing was being done on these frequencies already.

Sincerly,John H. Guetherman,KB7MIB/KAE7927/KAZ7FA

The new 800 Mhz Trunking system for MCSO is fully digital. You will not be able to make anything out with an regular analog scanner.

That depends,
The frequency may use CTCSS (a.k.a. "PL") tones. These sub-audible tones are too quiet for your ear to hear, but can be heard by radios. On occasion, sometimes some users may share a frequency and have different CTCSS tones. The tone is shown in the third (last) column of numbers in the Southwest Frequency Directory, if it is known. Unfortunately many scanners do not have an option to utilize this tone feature, although it is slowly becoming more common, primarily in the more expensive scanners.

The purposes of the PL tone is to silence a users radio except when the proper PL (sub-audible) tone is carried with the audible, voice transmission. So, you may hear two very different users talking on a frequency at times, but each users only hears the other members of its group, not the opposite groups users. That's because their radio is being "silenced" when it does not hear their own PL tone, since each group would have a different PL tone.

I know that may be a little confusing. Feel free to ask away if that did not clear it up! Maybe someone else can try to explain it as well.

From: Danny McLean
Topic: 209 Message: 209

Would someone please advise if they have any frequencies and rosters of stations and apparatus {Eng's, Dozers, Crews, fixed wing and rotor craft} for the following Federal wildland fire management/control agencies:

Bureau of Indian Affairs
Bureau of Land Management { my personal priority}
{US} Fish & Wildlife Service
Natl Park Service

I live out on the West Coast of the Arrid Desert state of Zona, somewhere south of NPS's Lake Mead Natl Rec Area, North of FWS's Havasu Natl Wildlife Refuge & w/n the box of BLM's 4 Districts of Stateline in NV, Calif's Desert District, Yuma & Kingman. So far I haven't be able to determine if any Bureau of Indian Affairs wildland resources are located in my area. We do have a new Federal Inter-Agency station down in the lower Valley that the news release stated would house 1 eng ea from BIA/BLM & FWS, but I haven't been able to get down there yet to visit w/them and confirm any of that info. {BTW} today was a cool 103 degrees & fire season 2K has begun.

Thanking you in advance
Danny McLean

Hi,
On the night of Monday April 24, a traffic collision occurred at Speedway and Euclid in Tucson. I was told that it happened at around 7:00 pm. I took this photo at around 9:00 pm (also have another taken with Night Vision. E-mail me if you want me to send it). Does anyone know the details of this collision? Was there a fatality involved? Why was it there for so long?

Thank you,

Chad Kurthy

Anyone monitoring the fire??

If so, what freqs. are you hearing on tanker comms. ??... That includes the air boss, please.

Thanks,
Temp

Hey Temp,
Other members of my scanner club (ICP) and I have been monitoring the fire on the regular Tonto NF repeaters. Unfortunately we're too far to hear the air-air comms and simplex ops on the NIFC frequencies, but the comms on the repeaters have been quite interesting.

FireNet-1: 168.725
FireNet-2: 170.500
Admin: 164.825

Air Attack (boss), which in Arizona region is Northwest Fire District Chief Jeff Piechura, can be heard communicating with ops on the above frequencies. He gets updates on what aircraft are inbound and outbound, etc.

Subject: NICC Incident Management Report 28-Apr-00

INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY, APRIL 28, 2000 - 1000 MDT
NATIONAL PREPAREDNESS LEVEL II

CURRENT SITUATION:

Large fire activity occurred in the Southwest, Rocky Mountain, and
Southern areas. A Type I Incident Management Team was assigned to the
large fire in Arizona. The National Interagency Coordination Center
processed orders for helicopters, radio equipment, crews, and
miscellaneous overhead. Very high to extreme fire indices were reported
in Arizona, New Mexico, Utah, Texas, Oklahoma, Michigan, and Wisconsin.

SOUTHWEST AREA LARGE FIRES:

COON CREEK, Tonto National Forest. A Type I Incident Management Team
(Bateman) is assigned and will be transitioning today. The fire is 20
miles north of Globe, AZ, in the Sierra Ancha Wilderness. Current
threats
are to a lookout tower, a communications site, a ranch, endangered
species
habitat, and cultural sites. Strong winds, high temperatures, and low
relative humidities will present challenges to suppression efforts
today.

ROCKY MOUNTAIN AREA LARGE FIRES:
```

BUCKHORN, Ft. Collins Counties. This fire started on 4/26 near Ft. Collins, CO. The fire is burning in heavy timber in an urban interface area. About 20 homes are threatened. An evacuation plan is in place.

SOUTHERN AREA LARGE FIRES:

CLIFF LAKE, National Forests of Florida. This fire is nine miles south of
Sumatra, FL in the Apalachicola National Forest. Current threats are to endangered species habitat and timber resources.

CHAIN LINK, Florida State Division of Forestry. The fire is 14 miles south of Groveland, FL. No new information was reported.

OUTLOOK:

*** A RED FLAG WARNING IS POSTED FOR MOST OF NORTHERN ARIZONA FOR STRONG SOUTHWEST WINDS AND VERY LOW RELATIVE HUMIDITIES ***

*** A FIRE WEATHER WATCH IS POSTED FOR SOUTHERN FLORIDA FOR LOW HUMIDITIES
AND STRONG WINDS ***

Arizona and New Mexico will be partly cloudy and hot. Maximum
temperatures will be in the 70's and 80's in the north, and 80 to 90
degrees in the south. Winds will be southwest at 15 to 25 mph.

Florida will be mostly sunny with high temperatures between 75 and 85.
Winds will be southwest at 10 to 20 mph, with higher gusts in the
southern
part of the state.

Wisconsin and Lower Michigan will be mostly cloudy with scattered
showers.
High temperatures will be 55 to 65, with somewhat cooler conditions near
the lakes. Winds will be north at 10 to 15 mph.

216. RE: [ArizonaScanner] Tonto For. fire

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-04-28 16:31:51 UTC
From: Temp Berdan
Topic: 213 Message: 216

Thanks Dan,
I saw on CH3 that they are upgrading to a Type I incident, so here are a bunch of NIFC freqs. that might just get hits on Air Boss; Tankers; Chase Plane; IR nighttime photo shoot plane:
IFC TACS 1 168.050 AIRCRAFT TACTICALS
2 168.200 168.625 AIR GUARD
3 168.600 168.650 INTERAGENCY FLIGHT FOLLOWING
4 173.9125 166.675 AIR TACTICS 1
5 173.9625 169.150 AIR TACTICS 2
6 173.9875 169.200 AIR TACTICS 3
7 168.650 170.000 AIR TACTICS 4 AIR/GROUND
8 168.350 167.950 AIR TACTICS 5
9 163.100 168.350 R 169.350 FAA LIAISON
10 163.100 172.600 AIR SAFETY COMMON
11 168.350 163.100 R

Hope this helps bring more "in use" freqs. to light.

obviously, I cannot hear them up here in Sedona, but I want them because I want to be prepared in the future for anything that gets started up this way.
I'm not looking forward to what happened 7 years ago when the Figueroa Fire (Northern Santa Barbara County) surrounded the mountain where I lived.
in the very small house/trailer enclave where I was, they moved in six forest service engines and evacuated all civilians.
The fire burned right up to the enclave and they wet the roofs and saved everything.
that one burned 75,000+ acres and took weeks to get completely out.

it involved a huge workforce of 1500 forest fighters and many, many aircraft.

Unfortunately, I went to Santa Barbara and stayed with a friend in an area where there is a mountain right behind her house.... so I didn't hear much of the action. :(

So, "Who me....worry??" ;)

Temp

Hi all,
I used Copernic to search for Tonto freqs. and it came up with this
additional resource (a great number of which are in Dan's fine SW
Frequency Directory, Edition 6... which I just got.... its a winner.
)))

http://www.intouchonsite.com/scanner.htm

As I haven't tested any of the freqs.... user beware of this site, as I
don't know if it is current or not.
NOTE: This is a tough site to bring up... so you are going to need
patience.

All,
Here is what is usually a very accurate and current frequency list by Harry Marnell, who owns several scanner related lists and is a retired LAX area dispatcher.
It is also a terrific primer on the NIFC, who always gets called in on the big ones.

This is a terrific resource and those of us who use it, owe Harry our gratitude.

Go here: http://www.snowcrest.com/marnells/natradio.htm .

Thanks Harry. :)

>advise unit number for air assets and ground engines from all agencies.

Danny,
From your link above, you can just check the assigned aircraft there.
Click the link, then click Fire Intelligence, then click SWA SIT300

That will give you the complete list of all the air resources assigned to
the Southwest region, and what their status is.

The pages shows 4 helicopters, 4 tankers, and two lead planes currently
assigned. Also, you can see on that page that 119.950 is the currently
assigned Air ops freq.

Guardian Air Ambulance is based in Flagstaff Arizona, and is actually part of the Flagstaff Medical Center.

They operate 2 fixed wings, and 2 helos.
Helos in Flag and Bullhead with both fixed wings in Flagstaff. They are actually a fairly small air medical program compared to the other guys in the state. You can also hear them on 155.325 which is the same as AirEvac operations. You usually here them on that freq when they are down near the valley.

Hi Robert!
You won't find NativeAir's Globe frequency, like so many frequencies these days, in a bulk FCC Database. Who things are licensed to have gotten more complex these days.

The new 6th Edition of the Southwest Frequency Directory, which is written by local scanner "experts", shows NativeAir's globe operations on 464.025 with a 136.5 PL.

Date: 2000-05-03 00:45:58 UTC
From: Davey Gravy
Topic: 228 Message: 228

I have Found an interesting set of unlicensed 900Mhz TRS systems
around the vally one in particular I found to have some kind of fire
dept talking with an Air Evac Helicopter and an Ambulance?
So far I have indentified 5 frequencies that are used in this system
that has many users.
938.5375 TG-30336= Medical Co.?
935.0625
935.5125
935.0750
935.5250
This system is similar to the one I found used by Tempe's privately
owned bus service listed in the new SWFD under Scottsdale.
There are yet two more of these unlicensed systems I am researching
and I will post all my findings on the board when I find more data
these systems are Motorola E2-900

What does PMT sand for and do you know of any locations around the valley they might operate?
Now that I have monitored this unknown 900 system it sounds like an ambulance company I will try to monitor where they are going to see what part of town they do cover,there is a cw id on some of those frequencies while monitoring in conventional mode but I live near a 900mhz pager transmitter and the overload is terrible I can't make out the cw and the freq is always transmitting that pager stuff.

PMT stands for Professional Medical Transport
They primarily do inter facility transports and very little EMS.

They do however respond to EMS in east mesa with Rural Metro.
PMT 121 and 51 are the most popular EMS Cars.

They have been doing some more EMS whenever status at Rural/Metro -Southwest runs low.

There is some talk of them gaining a few EMS contracts in the East Valley but nothing is official as of yet.

The company has been around for many years, and in its time, was quite busy with EMS responses. There are many who are unhappy with SW/RM and many feel this is PMT's time to regain some of the EMS Market Share.

From: John H. Guetherman
Topic: 235 Message: 235

PMT is Professional Medical Transport I believe.

One group that I have noticed is missing from the SWFD the past couple of volumes,is the TEAM security people who patrol Mill Ave in Downtown Tempe,and whom I have also seen at the Thunderbird Balloon Classic at West World in Scottsdale last November. According to FCC records,they're licensed on 463.425. I also did a search with my scanner one evening,and found (who I believe to be) them using 462.9375 specifically around Mill Ave. (I looked under TEAM in the FCC database to find them.) They provide security at one of the nightclubs in Scottsdale as well,and probably elsewhere. I remember hearing radio advertisments just before New Years,when they were hiring people for various events.

Does anyone know what 800 system Safeguard Security is on? They used to be on the same 800 system as Eagle Air but they must have changed. What they used to have is Ch 1 South Mt Ch 2 Usery Ch 3 simplex. But I am sure they have added more channels to whatever system they are on now. There identifiers should be Sierra 1 - Sierra 10 also they used a few two digit #'s like 97-99. I have looked in the Percon Database and all that info is obsolete, they show a UHF repeater and an 800 Mhz repeater like 853.2375 on Black Mt in Carefree.

Thx,

Joe

Hey Danny,
NIIMS is National Interagency Incident Management System. It's basically
the term for the controlling system on a campaign wildland fire. On Page 18
you'll find the entry for the National Interagency Fire Center, based in
Boise, which runs the NIIMS. Those are the frequencies that are put to use
on large fires, like the Coon Creek fire.

From: Robert Benne
Topic: 245 Message: 245

Okay - it's time to think about upgradeing. With all the local systems going to trucked systems, and the fact that I think my old scanner is simply outdated, I need to think about stepping up. Can you tell me:

1) Who makes the "best" state-of-the-art scanner today (perfer a portable unit) capable of working with trucked systems?

2) What happens if an agency (Maricopa County SO) goes "digital trucking?" Are you effectively SOL?

3) Anybody know of anything on the horizon that would make it worthwhile to wait (I realize they are like computers - obsolete over time but I hate to spend $$$ now and find a new model out in 3 months!)?

Thanks in advance for the input.

Robert,
The most reliable, quality handheld trunktracking scanner available at this time is currently the Uniden BC245XLT, with a retail just over $200. Uniden's upcoming scanner (a few months out) is the BC780, which will be a base/mobile trunktracker with CTCSS, Alpha tags, and other features even the 245 doesn't have, but is already retailing for $369+.

If any agency goes digital at this time, you are "SOL" for the moment. Fortunately, that is very unlikely to happen in THIS area before digital scanners come out. They (digital scanners) are already on the horizon as many large cities have already gone digital, including Memphis and Honolulu. In Arizona, I certainly wouldn't wait for a digital scanner. The only other reason to wait might be if you would prefer the new, better, base BC780 over the handheld BC245.

A great source of info on different scanners is www.strongsignals.net

Hi there,

Your two cents is right. But there have been many problems with vhf/uhf, none really with coverage but with capabilities, lack of features and people being able to buy a vhf or uhf ht ham radio etc and get onto pd & fd frequencies and cause problems. I have done tracking for a dept in California which turned out to be a kid who bought an old pd radio that worked on the Indio Police Dept Ch 2 c-c channel. The guy was broadcasting fake calls like he was just carjacked and asking the dispatcher for sex etc. I drove to the locations he advised he was being attacked and there was nothing there. He was arrested a few days later and the dept is now running encrypted vhf repeaters. I use a programmable Motorola vhf ht that will program in the whole vhf spectrum very easily it works great for my job but in the wrong hands can cause alot of problems . 800 mhz is more difficult to do that with and offers depts a ton more features but usually less coverage with results in more expensive repeater systems. Also if an 800 mhz ht is stolen it can be disabled from the dispatch center when its first keyed.. that cant be done with vhf/uhf radio's. But the scanner listener has to buy a new scanner every few year or so to keep up with the new technology out there.. Luckily the new 245 isnt that expensive.. I thought it was going to be over 350.00 but that isnt the case.

Just my two cents.

Joe

Joe,
The inability for VHF/UHF to be disabled over the air is inaccurate.
Kenwood provides "dead-beat disable" in all of their commercial two-way
radios allowing them to be disabled over the air with a simple DTMF code
that the dealer programs into the radio prior to delivery and it works on
all formats (i.e.. conventional, trunked) and all frequency bands.
The level of disabling can be RX/no TX to no RX or TX. It is similar to
turning off a LTR code with the exception that it allows you to selectively
turn off a radio or radios in the event that they are stolen.
Just thought you'd like to know. - Alan

252. VHF/UHF Disable

Date: 2000-05-09 21:22:44 UTC
From: ka7pcj@juno.com
Topic: 252 Message: 252

> The inability for VHF/UHF to be disabled over the air is inaccurate.
> Just thought you'd like to know.

Mother M also has a simular thing.... it can be done over the
air, from the dispatchers console, and the radio is TOTALLY dead, even if
you were to bring the radio to a service shop, they couldnt do anything
with it, only the console that killed it, can bring it back to life. This
type of system is alive and well here on Ft Huachuca... conventional VHF
(MP's, Fire, Housing, Medical ect.) operations.

From: Bacon, Daniel (AZ77)
Topic: 254 Message: 254

Hello, my name is Dan Bacon and I'm new to the group. I live in North Phoenix and am still quite a novice at scanning, although I'm learning more as time goes on. Does anybody know of a good web page or pages where specific AZ frequency info is available??

Thanks, Dan Bacon

255. Re: New to the group

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-05-12 05:13:34 UTC
From: David Bohmke Jr.
Topic: 255 Message: 255

Hi Dan welcome, you have the right place to learn just about all there is to know about the scanning hobby. The best way to get all the frequencies you need for Arizona and the Southwestern States is to pick up A copy of the Southwest frequency directory it is packed full of information easy to use and very accurate.
These places among others carry them

Bronco One Electronics
16416 N. 32nd st Phx
(602) 992-2016

Ham Radio Outlet
1939 W. Dunlap Ave. Phx
(602) 242-3515

Until you can get your hands on one check out this site
www.axtek.com/n7qyk/icp/links.html

256. Arizona Repeaters Directory

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-05-12 16:01:13 UTC
From: Tom Kelley N7RPZ
Topic: 256 Message: 256

Hi Daniel

For scanner frequency info, you can also check out the Arizona Repeaters Directory, host of Robert's List of verified frequencys in AZ. Robert's Links also posts some other web sites that have AZ-based frequency lists. On the Links-not-based-in-Arizona page, you'll find links to the FCC databases, Radio Astronomy databases, frequency allocations, broadcasting databases, etc.

www.azrepeaters.net

Mesa

259. Re: Trains and Mesa Police

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-05-14 09:11:47 UTC
From: David Bohmke Jr.
Topic: 259 Message: 259

I live in Mesa and monitor the trains and police all the time, here are my favorites
Union Pacific & Southern Pacific are one now
161.550-Primary road channel (very active)
161.100-"PHX Tower" yard channel (very active)
160.890-PBX Base (Can get busy at times)
161.040-PBX input (find out how close they are) mobiles use 75 watts
160.950-PBX (I have monitored activity once or twice not much

Burlinton Northern and Santa Fe are one now too
I don't really here much from them I think because they use tracks to the north into Arizona along I-10
161.370-PHX yard
160.935-PHX yard
160.650-Road
160.560-Surprise Yard(also a road channel in California)

Mesa police
155.010 Ch-1=Dobson Div.
155.595 Ch-2=Central Div.
154.950 Ch-3=Falcon Div.
154.815 Ch-4=Superstition Div.
155.130 Ch-5=Chase/Hot calls (the most important one to have)
156.015 Ch-6=Information
155.475 Ch-7=NLEMARS (I never here them use it)
155.535 Ch-8=SWAT and car to car tactical
155.880 Ch-9=Tactical Car to Car
867.1125 SID-1 Surveillance These three are very interesting at times
866.8375 SID-2
867.0875 SID-3

I hope these will help also check out some of the previously posted messages for Arizona frequency sites and other information regarding scanning around the valley

260. Re: Trains and Mesa Police

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-05-14 13:58:24 UTC
From: ka7pcj@juno.com
Topic: 259 Message: 260

You might also try 160.320 (U.P. road ch. #2)... it can be very
active at times, over here in my side of the state (Cochise County).
In refrence to those 3 SID freqs for Mesa, are those simplex, or
are they repeated in some way???... just curious, because the Sierra
Vista PD also uses 800 mhz for their "sensitive ops" on occasion.

Evening all,
Here's some freq. info. on the freqs. that are used for IFLOWS transmitters.
i haven't been able to determine if that is what is being heard in this
area, but I'll get there.
Would whoever asked the question, please repost the freqs. where they heard
data bursts in the Sedona area.

Go here for the info.: http://www.afws.net/freq/RadFreq.ihtml

Thanks,

Temp

Hello Temp

Thanks for the info! I checked the hydrological database, and found that
the region surrounding Sedona does not include the frequencies that Robert
KB7AQD and I, recorded last fall. The database yields, for the Sedona
region:

> Your search returned 3 record(s).
> St. Frequency Latitude Longitude Elev.
> (ft) Site Description or Name Sponsor Revision Date
> AZ M171.900000 34-50-38N 111-47-35W 4737 NWS 97-12-24
> AZ M171.900000 34-59-16N 111-44-44W 5308 NWS 97-12-24
> AZ M171.900000 34-51-42N 111-45-40W 4170 NWS 97-12-24

All of the hydrological frequencies posted for AZ were 169-171 MHz, with
some in SW AZ at 406, 409, and 412 MHz. Only the 412 MHz freqs are a

possible overlap, in that we observed this strange freq activity between 411-418 MHz.

I was in Sedona on Mother's Day, as a feature of accommodating my wife's interests for the day. I listened all day there with my Scout/Interceptor combo for the first time since getting my Interceptor. All I heard was some EMS activity at 158 MHz. I suspect that it was fire paramedics or a hospital ambulance service.

In talking to some local college kids at the Red Planet Diner, I learned that there's lot's of apparently military flyovers in the Sycamore Cyn area. They go up to the summit of Casner Mtn to watch sometimes. They suggested a correlation between my freq observations and the flyovers. However, the frequency observations are contained exclusively within the allocated Federal band 410-420 MHz, and I've had no hits in the 200, 300 MHz bands up there. (For example, I have had hits in the 200 MHz military aircraft band up near Globe.) The other feature to the activity that I've noted is very-high signal strength almost everywhere in the Sedona area, from Sedona to Loy Butte. My near-field sig strength meter readings were consistently almost "pegged." The weakest receptions were near Boynton Cyn, and the strongest were in Sedona itself, and at Dry Creek/Long Cyn areas.

BTW: What makes this high sig strength interesting, is that normally, using any HT rated 3-5 watts, in proximity to the near-field metering device requires that it be within 6-10 feet of the unit to get similarly high readings. I'm also able to get similarly high readings when I'm within 1/4-1/2 mile of South Mtn near Phoenix--or within 100-200 ft of antennas on Shaw Butte. But I've never had a situation where there's uniformly high signal over a large area before or since!

The other possibility may be military UHF radar -- but I can't imagine them deliberately using high power on a shared band segment with other Fed services and agencies.

Temp, thanks for helping to seek a solution to this mystery!

Tom N7RPZ

From: David Bohmke Jr.
Topic: 228 Message: 266

Mesa was busy today with alot of air lifts all kinds of MVA's all the Air Ambulances were called into Mesa at one time or another I was able to monitor all but Native American does anyone have a EF Johnson capable scanner? I tried to monitor them in conventional mode and herd nothing all day and was wondering if anyone from the valley has been able to ?

Native Air can be monitored with the Newer Radio Shack model scanner and I believe the newer 245 from uniden.
Their home frequency on the LTR system is 937-575. You can hear them on that frequency alot.
They also operate on some UHF stuff in Globe, and Winslow.

I posted an unlicensed 900 SMR with an abulance co as one of the many user's TG 30336 I have yet to figure out who this is? I was wondering if anyone knew of an ambulance copany around the valley not listed in the SWFD or have tried to monitor one listed but hear nothing on the freq's listed. This is a busy little company with both ALS and BLS transports to locations all over the valley I check the FCC database often to see if any of these freq's show up in AZ so far the only company that comes close to is a communications service in San Diego CA (where I am from?) Fisher Communications they have ties to Az but none locally or on the 900 band.
If you are missing an ambulance co. check here
935.5375
935.0625
935.0750
935.5125

Date: 2000-05-21 18:27:22 UTC
From: Andrew Clark
Topic: 230 Message: 271

Right now, only the Radio Shack Pro-92 will track an LTR system. Native is on Talkgroup 4012, and the frequencies are 937.5125, 937.5250, 937.5375, 937.5500, 937.5625, 937.5750, 937.5875, 937.6000, 937.6125, 937.6250. The SMR is Pro-Tec Mobile Communications. They rarely switch from 937.575, but an LTR system can effectively track them and avoid listening to landscapers, security guards, etc.

I was at the Job Expo that the SO hosted several weeks ago,and got a look into several vehicles. In those that were equipped with multiple radios,they had,(in order from top to bottom),a Motorola Astro,a Vertex,and a pair of Motorola Spectre's. The SAR coordinator also had multiple Saber handheld's,and a mobile CB. (Radio Shack,I believe.) Took some pics of the vehicles,and since the SAR coord had all 4 windows open on his 'burban,got a pic of the radio setup in that,as well. Haven't developed them yet,and I don't have a way to scan them in. Sorry.

Also,have they "gone live" on 800 MHz yet? Are they analog or digital voice? Any talkgroup info yet? I listened some about a week ago,but didn't hear any simulcasting/multicasting between UHF and 800.

Hi! You might have to take them over to someone who has a photo scanner and
get them saved onto a floppy. Then you can take them home and upload them to
send.

Take care.

Paul

From: John Guetherman
Topic: 235 Message: 277

I was down on Mill Ave. again last night,and I was monitoring TEAM. 463.425 (repeater) seems to be the main channel in use there,and 462.9375 (simplex) was referred to as "Ch. 6". I just checked the FCC records,and their callsign is WPIV 595. They are licensed only on 463.425 and 468.425. They do have a license pending,A054791 with the following frequencies:

461.925
462.100-467.100
463.425-468.425
463.675
463.725
464.950

Also,has anyone else gotten the dirty looks or smart-mouthed comments when you're carrying a radio around,along the lines that the other person thinks you must be a cop? I got the smart-mouth comment twice last night. And I've heard it,(or about it from a friend who heard it mentioned about me),before as well. You'd think with the proliferation of cell phones and FRS radios these days,that most people wouldn't look at someone who has a radio as being a cop or a security officer. It's annoying. I wish I had a T-shirt that said "Yes,I have a radio...No,I'm not a cop",printed on the back. I don't look like a cop. I'm at least 40-50 pounds underweight to be one. (6'3",140 pounds.) What have your experiences been?

John H. Guetherman

--- In ArizonaScanner@egroups.com, "John H. Guetherman" <kb7mib@h...> wrote:
PMT is Professional Medical Transport I believe.

One group that I have noticed is missing from the SWFD the past couple of volumes,is the TEAM security people who patrol Mill Ave in Downtown Tempe,and whom I have also seen at the Thunderbird Balloon Classic at West World in Scottsdale last November. According to FCC records,they're licensed on 463.425. I also did a search with my scanner one evening,and found (who I believe to be) them using 462.9375 specifically around Mill Ave. (I looked under TEAM in the FCC database to find them.) They provide security at one of the nightclubs in Scottsdale as well,and probably elsewhere. I remember hearing radio advertisments just before New Years,when they were hiring people for various events.

279. BREAKING FIRE NEWS: TWO new fire break out in Coconino County

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-05-28 22:50:31 UTC
From: Temp Berdan
Topic: 279 Message: 279

5/28/00 03:30 PM MST
Two new fires are being reported by forestry lookouts.

The first is near Sycamore Point (Named the Sycamore Fire)and is also
near the Winter cabin in an unnamed wilderness area.
A multiple air response is underway, with at least 3 tankers, 3
helicopters and an unknown number of ground personnel.
Listening freqs.:
Coconino Forest Dispatch: 171.550
Air ops.: 135.620
Coconino Forest freq. 2: 172.300

The second fire is a heavy brush fire which has spread from the grassy
picnic area in scenic Oak Creek Slide Rock area.
The Slide Rock State (???) Park is being evacuated and serious
consideration is being given to closing St. Hwy 89A as there are 20-30
MPH winds blowing northward up Oak Creek Canyon.
Potential dangers are: Hikers could be nearby and there may be creekside
residences in danger.
Currently, a massive effort is starting to throw as many resources as
possible to stop the fire before it is completely out of control.
All area type one crews are assigned to the Pumpkin fire are local fire
official are stating that they are not, at this time, available.
more tankers and helicopters are being called into service from the
Prescott and Winslow tanker bases and those just assigned to the
Sycamore fire are being diverted to Oak Creek.
The fire is unnamed.
Gray smoke is now visible from the Village of Oak Creek and the fire
only started 20 minutes ago.
Off duty Sedona Fire District personnel are being called in at this

Freqs:
Sedona fire district: 154.400
Air ops.: 135.620

more as the fire develops.

UPDATE 04:14 PM:
These freqs. are now active over Slide Rock area:
Victor: 119.500
Air Ops.: 135.975

Fire has stopped at edge of Canyon and tankers are in a holding pattern with choppers attempting to snuff it, before it gets a start in the more heavily forested plateau area above Slide Rock.

Another fire near the pinewood area has broken out (1/2 miles from area RV park) and consideration is being given to releasing some Slide Rock air resources (tankers) to go to that fire.

281. RE: [ArizonaScanner]8:00PM UPDATE:: BREAKING FIRE NEWS: TWO new fire break out in Coconino County

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-05-29 03:05:18 UTC
From: Temp Berdan
Topic: 279 Message: 281

UPDATE 8:00 PM:
Slide Rock fire has been suppressed (but not out). Tankers/helos diverting to home, after several tankers dumped several loads on the Pumpkin fire. As far as I know, several crews and Sedona Fire District crews are still on the lines (which must be vertical)... I cannot hear their activity as they seem to be going direct and that is behind Bell Rock which my antenna looks at.

Voltee (??) Arch fire: This broke out while the Slide Rock incident was really active.
The arch is SW of Oak Creek Canyon, so I doubt that it was started by air borne embers from Slide R. fire. Status unknown.

Pumpkin fire:@ 4500 (mostly Uncontained) acres this AM, the afternoon winds apparently stoked it up, as they redirected some tankers from the Slide Rock fire. Current status UNK.

Pinewood area fire: Status unk., but zero smoke observed from Village of Oak Creek area.

TV coverage: Chopper 15 was cleared to go in and shoot Slide Rock area, and I would assume that they shot the other big fires as well. Is that the PHX Channel 15???
Also keep checking Channel 3 (PHX), as they had chopper and ground crew coverage up to Saturday night.
that's it from here gang.

Back to Santa Barbara next week.
See you all when I return in November (hopefully with lock, stock (horses) and barrelssssss) and on a permanent basis.
Santa Barbara (I've lived there (of and on) for 50 years) is now Hollywood North and the traffic is awful.
Cheerios,

282. TEAM in Tempe

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-05-30 02:58:07 UTC
From: T. Weaver
Topic: 282 Message: 282

One night, some friends and I decided to "test" the news story that the Downtown Tempe Commission (DTC) was going to ban ALL guns and alcohol from ALL cars parked in DTC lots (which are ALL "formerly" city owned lots). The DTC uses TEAM Security as their security "guards". To make a REALLY long story short, we went armed, 2 of us open carry in compliance with AZ ARS, the rest CCW, again in compliance with the law.

The cops harassed us within 10 minutes of hitting the street. We then had "shadows" from TEAM security the rest of the evening...whenever we passed one of them, we could hear them say something like "they just passed my post". Eventually, one of them saw one of our guys go into a store (a friend who ended up having a great conversation with the manager). When he came back out, there were 12 cops surrounding him...took his weapon, checked the serial number, asked why he was carrying,etc.

All these cops had their backs to us, the remaining seven people, all armed. Bad tactics. Only concentrating on the guy who was OPENLY carrying...which is LEGAL in the state...duh!

Anyway, it got ugly for a bit, the cops relaxed then gave my friends (actually, 2 of them had been disarmed) back their guns. The look of disappointment on the cop-wannabe TEAM member's face was a Kodak moment.

Anyone truly interested, email me off list and I will relate the entire story if I can find the original email to some friends....it is WAY too long to have to recount!!

But, in a nutshell, TEAM has a chip on their shoulders and their salaries are paid by DTC...the board of which is nearly the entire Tempe city council, including the mayor. It's all a scam, which is likely why there's no enforcement on the frequency issue....

Tim

Hello,

In reference to your encounter, were you on Mill Ave? If so weapons are banned on Fri & Sat eve down there. I was down there about a year ago and walked by alot of officers and they never once asked for id etc. But TEAM wasnt down there then. Usually the only time I get asked about my concealed weapon is going into a court house or a sporting event where bags are checked. But I think I might go down to Mill this Friday and see if I get the same results as you did with TEAM. Plus havnt been down there for a while and wondering if it has changed.

Does TEAM operate on repeaters or simplex?

I'm glad to see some people standing up for their rights.There are more people moving to AZ. that don't respect the freedoms that firearms owners have.The freedoms that exist in this state is one reason why we moved here.The ones that take offense should either accept and understand or move back to the states they came from.I moved here from the communistic state of N.J. of which I'm not proud.

From: T. Weaver
Topic: 287 Message: 287

Tempe tried to do this by saying it was a Public Event. However, the law states that in order to "ban" weapons at a public event, there must be CONTROLLED access points, like at the Thunderbird Glow (when it was downtown)...they had a fence with access points/gates. Tempe's Mill Avenue has none of that. Thus, the court tossed it out since all the side streets, alleys, etc., were not closed off. It was wide open and, thus, didn't fall into the category of Public Event with regard to firearms. BTW, Tempe "forgot" to remove the signs about this until we called them to the carpet on it (there may still be some up, though...). Ultimately, we were "asked" to leave the actual Centerpoint property, but were fine on the sidewalk (public property)...the cops knew they had no "case".

As for the new law, yes and now. HB 2095 sought to eliminate local authority for gun laws, making it (properly) a state issue. Long story, but it was amended by "moderate" Republicans who caved to the NRA's compromise stance....what we ended up with was a law that creates two classes of gun owners...those with CCW and those without.

Now, cities and local municipalities can ban the carrying of firearms in parks and preserves of less than one-mile square (most of them) except for CCW holders. Also, they can ban the carrying in areas greater than one mile square in areas that have "public improvements", like boat docks, ramadas, etc. So, unless you have a CCW, you're toast. I know many who refuse to get a permit in order to exercise a right. One thing 2095 DID give us is the requirement that government/public buildings must have lockers or facilities to check weapons for anyone who wants to check them. Living in Glendale, the libraries have/had no weapons policies. Now, they're going to have to check them. And don't worry...we'll be testing them.

Shameless Plug: Anyone interested in getting involved in Second Amendment issues, let me know off list and I will point you in the right direction.

And, to the list owner, I promise not to wander so far off topic again!! :)

From: Danny McLean
Topic: 218 Message: 288

Dan check out the part highlighted in red:

Grand Canyon NP (AZ) - RescueOn the evening of May 24th, park dispatch received a call from an emergency satellite phone at Tuweep, a remote North Rim location. The caller reported that 16 hikers were in trouble on the difficult Lava Falls route. The group, all of whom were from Lehigh College in Pennsylvania, were part of a Horizon Training Services advanced leadership forum. Temperatures during the day had been over 100 degrees. Six made it out and contacted a visitor, who made the call. Two of the six had altered levels of consciousness; many of the ten hikers below the rim were reportedly in and out of consciousness and others were vomiting. North Rim rangers responded by vehicle, but it took three hours to arrive on scene. They contacted one of the remaining ten hikers, who had made it out. He reported that the other nine had hiked back to the river to spend the night and that there were no immediate life-threatening medical problems. At first light, an Arizona DPS helicopter flew all nine back to the trailhead. One was then flown to Flagstaff Medical Center with a knee injury. None of the remaining 15 required medical attention. Over 20 interagency rescuers responded from the park, Mojave County and Colorado City and were supported by three helicopters, one each from the park, DPS, and Classic Lifeguard Helicopter. Hi,

I know we have gone off subject.. There are two basic groups, ccw holders and non. I am an officer so caring into bars "not drinking" , Wal Marts, courts etc is a right. I rarely get asked when I carry into these places. At a Wal Mart the sporting goods clerk asked if i was carrying and i said yes and who i worked for then he said, you are lucky I am letting you carry in here.. we only allow Phx PD to carry in here, i just nodded.. thinking you dont have any say in the matter, nor does your manager or the owner of Wal Mart lol

Maybe we should start an Arizona ccw group or something?

Perhaps you do need a new list. You clearly acknowledge that you know your posting is off subject, but post it anyway. I've seen 4 messages now since Mike, another member of this list, asked that off topic material be taken elsewhere. If you want to discuss the radios TEAM uses and their frequencies, that's fine. I have not had to moderate this list yet, and approve/deny messages as they are posted, and I hope not to have to. Please respect Mike and others email by kindly following their request and mine not to post off-topic material on this list.

Thanks,
Dan Rollman

By law anyone carrying a concealed weapon legally only has to answer to a sworn officer unless there is a sign stating NO FIRE ARMS ALLOWED.

293. Trunking in Chandler

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-02 06:56:57 UTC
From: Christopher Kracht
Topic: 293 Message: 293

Does anyone have the proper combination of frequencies to trunk the Chandler PD?

I have looked at the Quicksheet in the file area but I can't seem to get the right combination. I have not had this problem with Tempe so I know I am using the scanner properly.

Thanks,
Chris

Hi Chris,
That's strange. I and many other members of my scanner club have used those frequencies with E1-P10 for quite some time, daily, with no problems at all on either Chandler PD, Gilbert PD, or the Chandler City services talkgroups. One note: Chandler is VERY hard to hear North and East of Chandler. In Tempe, I cannot hear the Chandler trunked system at all on handheld. Takes the 895 on the "big antenna" just from Tempe! Perhaps you are too far away? If you are in Chandler and still not able to hear it, no clue. What kind of scanner?

Dan

298. County Parks voice automation system

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-06 05:47:22 UTC
From: David Bohmke Jr.
Topic: 298 Message: 298

Last night late I was monitoring the county system on Thompson Pk. Just searching around looking for something when I found TG 304 under type II set up it was a voice automated warning system linked to all the Emergency call boxes at all county controlled parks and lakes. There must have been some kind of malfunction it kept repeating the same thing over and over "Emergency Lake Pleasent boat launch Emergency" It named off about 5 or 6 different parks at times keying over it'self with the same message naming the location then repeating "Emergency" I did not hear anything on the parks TG's so they must have just let it do it's thing until a tech could be sent out in the morning?

???Has anyone else monitored anything like this???

299. County Parks Vice Automation/Call Boxes

Hi Steve,

Old news. Yep, it's been repeated for upwards of two years now. It is the secondary tactical channel, used pretty much daily. If you're interested, take a look at www.scannerstuff.com for the Southwest Frequency Directory's new 6th Edition. Contains all that kind of updated information.

News Flash! Digital Scanner available by end of the year! Scanner monitors will finally be able to monitor digital trunk systems that have been constructed throughout the country. Uniden Bearcat Corp will be unveiling a handheld digital scanner with a suggested retail price of $399. Greg Knox, the man who pioneered the development of the first trunk tracking scanner will be offering another product - an add-on interface board to allow monitoring of digital trunking formats. The price will likely be about $500

David,
Please cite your source(s) on this. Uniden has pushed back the BC780
release to September and is struggling just to get that high-performance
analog scanner out by the end of the year. Please tell us more on this
revelation of a digital scanner.

Thanks,
Dan

307. Looking for Tucson to Nogales freqs.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-07 22:47:01 UTC
From: Kevin P. Inscoe
Topic: 307 Message: 307

Hello all,

Taking a trip to Phoenix for a class 6/18 and then off to Tucson area
for a few days and then down to Sonora, Mex. for a day trip.

I am looking for a couple of thing if you would be willing to help me:

Bringing the BC-245 and looking for freqs or web site for Phoenix
fire and pd and anything else of interest.

Then making the trek down I-10 to Tucson would like to know what
counties I would be passing through along the way and what to plug in
for sheriff, fire, etc.. I know Maricopa is PHX area and Pima is TUS
area but don't know the rest.

Third looking for freqs. in the greater Tucson area and will
also be visiting Kitts Peak so anything for that area.

Fourth looking for any Davis-Monthan freqs.

And then finally I want to drive through to Sonora this time. I
walked it last time (and I didn't take my scanner last time either).
So would like to know your thoughts on A) doing that and B) taking a
scanner with me both driving through and walking through. Any customs
issues with all this?

Well that a tall order I realize but if you are ever in Florida I will
be more then happy to reciprocate! :-)

Thanks much in advance for anything you can tell me!

~kevin

Fred White of Scan Fan San Diego's frequency directory has a new site under cunstruction with this news flash posted most likely when completed this site will have more information. I have sent e-mails to him but as busy as he is with this site and all the other projects he gets into it takes him awhile to get back to me and I didn't want to push the issue but I will post all my findings as soon as I get them. Here is the site URL

I was informed tonight that the Maricopa County Sheriff's Office will be abandoning their UHF radio system as of 6/13/00 and going to their new digital 800 MHz Astro system. Search8 (159.090) will still be in use for Lake Patrol and SAR details. MCSO Dispatchers will be moving into their new dispatch center, and will be broadcasting only on the TRS and Search8.

I heard the same info today, Andy! Thanks for posting that. Tuesday will be fun to see. If they simulcast at all on Monday or Tuesday, it will be interesting to see what talkgroups correspond to which simulcasted channels. You'll hear static only, but the TrunkTracker will show the corresponding talkgroup, so I've heard from people in other digital cities. There are a few (at least one anyway) digital talkgroups up on the Thompson Peak system right now but I haven't been able to notice them "paired" with any UHF channels at the moment. "StaticFest 2000" next week should be interest to witness! :)

Don't know if you can hear much down TUS way, but here are a few
freqs being used by the forest service for the fire.

168.150 Rattlesnake ops.
169.150 air to ground helos for water drops
168.625 "guard"
169.600/411.525 Coronado Nat Forest "dispatch"
118.950 "air attack" (lead aircraft and slurry bombers)

Dont know how much got squared away last night....

Maricopa County. This system is already up and has been for years, it is just now that MCSO seems to be making the move. This is "the" Maricopa County 800 MHz trunked system we're talking about. Same one that is used by probation, etc. Only difference is that MCSO will be in the digital mode.

Can anyone tell me when I get into PHX if I could buy it locally
anywhere?

It's too soon to my trip to have it shipped now.

Thanks

318. Digital Trunking Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-08 19:01:09 UTC
From: Dan Rollman
Topic: 318 Message: 318

Today's StrongSignals news flash also has info on a Digital Trunk Tracking scanner. Greg Knox, the inventor of the TrunkTracker, supposedly sold his new invention to Uniden, and was telling folks at Dayton that Uniden will have a digital TrunkTracker out by the end of the year. While I doubt that date, considering the 780 is already delayed again to September, it is reassuring the see that perhaps MCSO won't be "unmonitorable" for too long... that is if and until the "encryption" switch is thrown. Encryption, of course, has not had nearly the same success in court as simple digital formats, so while digital may last, encryption of all patrol activities may not stick given a media-funded lawsuit. We shall see.

Take a look at www.strongsignals.net and you'll see the same info someone else posted on here a few days ago, care of the Orange County oriented webpage. Nice work guys! Word is spreading... Keep up the great sharing of info!

Dan,since Probation seems to operate on all the County systems that
I've heard,could you be a little more specific? :-> Will it be the
White Tanks/Thompson Peak system,(KNNN306),the KNIH427 Jail
system,simulcast on more than one system,or another system? I can't
seem to keep all of them sorted out. LOL.

I've also noticed that the KNNN305 system,which is spread out among
several sites,seems to use frequencies from both the White Tanks and
Thompson Peak KNNN306 systems,including the Gila Bend/Yarnell
Hill/Mt. Ord-Bronco Butte extensions of the two main sites. The only
exclusive frequencies are located at the Chandler FD Sta. 281 site
and the Humboldt Mtn. site in Carefree. Is this really a seperate
system worth monitoring,fill in sites that we should add to the two
main sites,or what?

322. Re: [ArizonaScanner] Re: MCSO TRS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-10 09:49:57 UTC
From: Joe Stein
Topic: 309 Message: 322

Since I don't live in the Phoenix area any longer, I can't comment on specifics, however, when I was there in April, I noticed that several of the pre-existing Maricopa County trunked-sites seemed to be tied into a common SmartZone controller now. The newest frequencies, especially (in the YF area, above 866.)

SmartZone is kind-of cool. What is really sad about it, is that if you are monitoring one site of a SmartZone system, and two users (or more) are using a different SmartZone site, and the system controller is not set to wide-area broadcast that talkgroup, you won't hear it (unless you are listening to that site).

Also, SmartZone systems are COMPLETELY TYPE II. There can be NO type I talkgroups in a SmartZone system. (The subscriber units are not compatible).

Also, remember, that when this all comes to fruition, there will be blocks of digital and blocks of analog (if any).

00000 - 08192 (block 0)
08193 - 16384 (block 1)
16385 - 24576 (block 2)
24577 - 32768 (block 3)
32769 - 40960 (block 4)
40961 - 49152 (block 5)
49153 - 57344 (block 6)
57345 - 65536 (block 7)

In each of these blocks, either all talkgroups will be DIGITAL or ANALOG. They cannot be both.

In other words, 4592, and 8080 (just pulled out of a hat - don't know if they belong to anything there or not) will both either be analog OR digital, but 12752 and 28432 could either OR both be analog or digital.

They *can* be encrypted.

If you were to watch the progression of frequencies (with Trunker, for example), I am sure you would notice certain frequencies being used for digital / encryption and others for the analog/unencrypted stuff.

joe

Thanks Scott. I suspect as much. I have gotten a lot of warnings that it would/could be ripped off but I have walked it before and it struck me that the locals were just glad I was there and willing to spend American.

The most accosting I had was "you looking for medicine, Viagra??" :-O

A couple of questions though.

1) I am hearing that DPS is going digital this coming Tuesday (just my luck) and is currently using 460 MHz until then. True?

2) I also hear the talkgroups of Tucson's EDACS have been switched around are these on a web site anywhere?

3) I am looking for PD/FD/DPS for towns along I-10 and then US19 as that is the route I will take south.

4) Looking for Kitt Peak and USFS fire freq's as I will be monitoring out that way. Also looking for PD/FD in Sahuarita that is where Titan Missile Museum is located.

5) Wondering how the 'Wildcat' and 'Rattlesnake' fires are doing.

This is btw a scanner trip. Yes it starts out a biz. trip but then I have 4 whole days after that so I plan to do daily reporting and possibly a web page with pics. and confirms. I really appreciate all your help. Oh if anyone wants to do lunch by all means let me know. My itinerary is at http://www.inscoe.org/load.cgi?itinerary

Thanks again!

~kevin

324. help w/programming BC-245xlt for Chandler TRS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-11 16:07:50 UTC
From: azradiobuff@usa.net
Topic: 324 Message: 324

I just bought the 245xlt and I am having problems programming my
system here in Chandler.
I'm not a scanner newbie (10+yrs) but I am a TrunkTracker newbie,

Here is what I do:

1. press the trunk button 2 sec. to get into trunk mode
2. select the bank I want to program
3. enter the type, E1
4. enter the fleet map E1-P10
5: enter the freqs into the bank starting at memory #1

what did I miss "and-or" where to go from there?

Manual say then press "search" then it will start finding talkgroups..

I have seen a manual update @
http://www.tcfb.com/dat2comm/hints_&_tips.html which says:

"Press . The scanner will start scanning the frequencies you entered,
looking for the data channel for that system.
You should see ---------- on the display."

Press the . or is this a typo...

HELP!!!!!!!!!!!

The confused and bewildered

Topic: 307 Message: 325

Answers as follows to your questions:

1 DPS on I-10 from phenix through tucson
a) casa grande area district 6 460.025
b) tucson to border area district 8 460.425
c) all areas use 460.225 car-car

AS far as digital I have not heard but I have heard several days with DVP
in use on the state freq of 460.275

2. I am not trunked capable yet ,poor me. No funds at time for new toys

3. Tucson pd tucson fd
ch.1 155.010 ch.1 453.100
ch.2 155.730 ch.2 453.200
ch.3 154.725 ch.6 453.600
ch.4 155.490 (these are the most used)
ch.5 155.850
ch.6 154.755

Rural Metro fd

154.370
154.400

Kitt Peak
164.350

Mt. Hopkins (just south of sahuarita/green valley are)
169.925 and 169.950

Sahuarita pd

460.450

Sahuarita/Green Valley area fire
154.325

Rio Rico fd
154.205
Tubac fd
154.160

Pima County S.O. Controls all pd action in this area in a trunked system.

Nogales P.D.
155.790

Nogales F.D.
154.130

Santa Cruz S.O.
158.895
158.925
155.595
I have encountered one identified freq from nogales sonora. 171.350
This my wife says is the nogales municipal pd. I am looking for the
federales, grupo beta and any other freqs in sonora available.
I have some interesting mine freqs from the tucson greater area if you are
interested.
Let me know if this is enough or if you would like more stuff

Scott

The discussion about digital was in reference to the Maricopa County Sheriff's Office (Phoenix), not DPS. No fears on DPS. Also, 460.275 is a CI (Criminal Investigations) frequency, which is why DVP is sometimes used. The "State" frequency is actually 460.225.

>2. I am not trunked capable yet ,poor me. No funds at time for new toys

> ch.6 154.755

Tucson FD, 453.600 is Ch3, Fireground, rather than Ch6. Ch6 is 453.375, and is used for the BLS Private transports on medical calls.

PimaSO is now on an EF Johnson Enhanced LTR Multi-Net II trunked system.
The old EDACS system is gone. While LTR can be monitored on a few scanners
these days, Enhanced LTR cannot. You can hear Pima SO "the old fashioned"
way by scanning their frequencies in conventional mode, hearing everything
mixed together, but you cannot Trunktrack them.

Hello,

It sounds like you are doing everything right.. One thing when you press trunk and then the bank you want to program then E1-P10and start entering the freqs it should show trunk on the top left corner of your screen and using the up down arrows you should only be able to access the bank you pressed to program the freqs.. after you are done entering the freqs press the search button.

Ok this one is a bummer. I have a BC-245 but I could get my hands on a
PRO-2067 which does LTR but according to this it wouldn't do any good.

Oh well.

> Other than those updates, a pretty good list for a traveler Scott.

I agree it is a big help to me! :-)

330. FYI

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-12 19:46:13 UTC
From: Danny McLean
Topic: 218 Message: 330

Dan, eye been reedn' your most excellent book and decided to E w/U re: rescue helos in AZ & NV. U have done a really good job of identifying the {35+} birds in AZ as noted on page 24. I didn't count the Law birds as they are not noted probably due to shift work and being housed in hangers, sometimes that makes it difficult to get an accurate count. This native Air is interesting in that they have a roster of {7} birds. Now as you know it aint cheap operating one of these new high tech birds & they have {7}. They must be real good @ what they do. Are they an Indian agency as the name implies are is that just a coincidence? Now for some info out here on the West Coast of the Arrid Desert State of Zona, and the Riviera community along the beautiful shore of the {once mighty} Colorado River, where it only getz dark, it don't get cool.

Here w/n a 100 mile radius of us we have available {9} rescue birds. Amazing isn't it. And that has evolved just w/n ther past ten years. The newest ship to join the fleet is AirLife 11 based @ Boulder City NV Airport. Went into serv on Tuesday June 6th. Will primarily be used for Natl Park Serv Rescues for Lake Mead {which has it's southern boundry @ Davis Dam/Lk Mohave} & Western Grand Canyon. The complete roster of rescue helos out here is as follows:

Radio ID Base Agency Model
AirLife 7 * Mercy Air Bell 412
AirLife 11 ** Mercy Air Bell 422
LifeGuard 1 Vly Hosp Flite 4 Life
LifeGuard 2 Pahrump Med Ctr Flite 4 Life
LifeGuard 3 Primm, NV Flite 4 Life
Angel 2 BHC Airport Guardian Air
AirEvac 8 KGMN Airport AirEvac
Ranger 33 KGMN DPS Office AZ DPS Bell Ranger 206L
40 Robert Lk Havasu/Needles SBD SO

*MP 27 0n I-15 @ Lk Mead Dr exit 46
**Boulder City NV Airport

Las Vegas Metro Police have {5} helicopters, 2 of which are configured for air Rescue

I hope this data is of some help to you for future updates to your SWFD. If you need more detailed info on any of these birds, let me know & I will make an attempt to get it for you. I have recently made friends w/a pilot and a filte paramedic for two seperate agencies.

Hi Danny,
Thanks for that info. I will definitely keep it on hand for updates. Native Air's primary owners are native American, which is why they chose the name they did. It does fly a lot of native Americans from the reservations out here, especially with their birds in Globe and Winslow. However, they are just another for-profit private air ambulance company like the others, and are in no way limited to transport of Indians, and are not tied to the BIA or any other agency. They are growing extremely rapidly, primarily due to excellent control over their cost structure, an area that traditionally negatively effects the success of ambulance and helicopter companies alike. Hope this helps. Thanks again for the info!

Danny
You might want to check, but to my knowledge AirEvac 8 in Kingman went out of service a few months ago due to budget cutbacks. I know they are not listed as active with EMSCOM any longer.
Native American Air Ambulance is based in Mesa at Williams Gateway, but presently operates <7> helicopters, and <5> fixed wing aircraft. The President/CEO of Native Air is a member of an Apache Indian Tribe, as well as a retired pilot for America West Airlines (Airbus Captain). Native American Air serves anyone needing assistance. A vast majority of the fixed wing business comes from Indian Health Service Contracts throught Arizona and New Mexico. A majority of the rotar wings flights are scene calls. Globe and Winslow Helicopters actually do not transport a larger number of Native Americans than any of the other helos. So in essence, Native American Air is owned by a member of the Native American community. The fixed wings do transport a large number of Native Americans, but the helicopters transport numerous other patients from around the state each day.

I found my trouble, the Uniden Freq guide that comes with the radio. They do not include the data freq for the system! I heard 2 other data channels within the other freq, but they are not "THE" trunked data freq.

I should know better after 10+ years of scanning that Uniden freq guides are toys compare to SWFG, Police Call, and the Scanner Master series.

Calling them toys is being very mild, but I will watch my mouth!

Thanks for the input raven..

Scott,
Unfortunately, their new system (as of November of last year) is Enhanced LTR. There are models of trunktracker scanners that handle Motorola, EDACS, and regular LTR systems flawlessly. Unfortunately at the present time there is not a scanner that trunktracks Enhanced LTR, which PCSO uses. So in answer to your question, they are in fact "unreadable" at this time. Remember, however, that they are analog and not digital, so you can scan all the frequencies conventionally, but obviously the conversations will skip around from frequency to frequency in between transmissions. You simply cannot trunktrack to follow a conversation automatically.

Radio hacker sentenced to five-year term for interfering with police

ASSOCIATED PRESS
June 10, 2000

LOS ANGELES -- An amateur radio operator was sentenced to a five-year prison sentence for interfering with police radio frequencies.

Jack Gerritsen admitted he broadcast an obscene message on police frequencies that began "you Rampart pigs" more than 1,000 times last fall, said Los Angeles County Deputy District Attorney Steven J. Ipsen.

The 64-year old from Bell, a community 16 miles southeast of Los Angeles, was arrested in December after a lengthy investigation by the California Highway Patrol and the Federal Communications Commission. The CHP got involved after Gerritsen's interference disrupted the pursuit of a suspect who
eventually escaped.

Gerritsen was sentenced Thursday.

His interference of police activities was not limited to radio, Ipsen said. Gerritsen has been present at several police raids, pointing out undercover officers to suspects, and has been a regular fixture at DUI checkpoints for the
last ten years, authorities said.

"Most people who are in touch with reality know there are situations which require police involvement," Ipsen said. "Mr. Gerritsen doesn't believe that police involvement is ever justified."

Gerritsen, who represented himself at trial and sang the theme song from the TV show "Cops" in his closing argument, said his broadcasts did not interfere
with police and were protected by his First Amendment rights.
Gerritsen also faces 34 misdemeanor counts of violating police frequencies in
nearby Orange County.

Interference with police frequencies was a rare occurrence until a few years ago, when sophisticated radio equipment became available, police said. Gerritsen has been the most significant problem of this kind in Los Angeles county, Ipsen said. "No one is as prolific as this guy."

With Gerritson's conviction, "a lot of police officers are going to be able to
focus on their jobs without being insulted on a daily basis," Ipsen said.

Listen to the SS channels, especially "Oscar". 160-170 range.
I've heard them in the clear at other locations.

Might also listen to DPS "State" (460.225) for bodyguard traffic and
District 5 (460.325) for motorcade.

Walter

345. MCSO

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-24 09:16:03 UTC
From: ravenfalls@aol.com
Topic: 176 Message: 345

MCSO is slowly converting over to 800. Today Ch 3 has switched over and sometimes it is simulcasted onto UHF. The Ch 3 ID is 43248. Every deputy has been issued a new Motorola HT 3k a piece. The HT can switch systems and Thompson PK is TPK & White Tanks is WTK. There is a system in New River at Circle MT (which is down), not yet seen in the SWFD and I cant find it on Percon. Lakes will stay on Ch 8 for a while then all lakes patrol will switch to 800 in the future. Scottsdale PD, Suprise, & Fountain Hills Town Marshals. Scottsdale PD's id is 4176. There is a problem with that since MCSO is digital & the others are analog but that should be fixed soon. Also there are a few interagency channels. Also no simplex. Hopefully there is a digital scanner out soon for everyone!

346. OC Digital Failure

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-27 19:41:51 UTC
From: Dan Rollman
Topic: 346 Message: 346

Hope MCSO is counting the number of officers lives that are jeopardized because of their "new" radio system. This article makes clear why Irvine PD in Orange County, which also has a Motorola digital trunked system, is. Take a look:

http://www.calendarlive.com/tvent/radio/20000623/t000059824.html

Note that Orange County does have a mixed TRS, with both analog and digital comms on the system, similar to Maricopa County's system. Irvine PD, featured in the article, does operate in digital mode. It is unclear if the agencies using analog only, like OC Fire, are faring as bad as Irvine PD has.

Also, a friend spoke with several MCSO deputies working off-duty at BOB who say their new radios were already not living up to even what the UHF system was accomplishing. To quote one deputy... "these things are SH*T!"

Will be interesting to see what happens next, and whether the AZ Republic will have to be the next major newspaper to tell their readers what their law enforcement officers got from Motorola for the millions they spent. The LA Times and Baltimore papers have already done similar articles with quotes from officers describing life threatening situations their radios forced them in to.

From: Carl Maness
Topic: 347 Message: 347

I lived in Irvine for 10 years and always had 460.6 (Irvine PD) fired up. Their radios and ALL other OC PD's were clear and readable from anywhere in the city, even the canyons. OC Fire was on 46Mhz simplex and the mobiles were just as readable. Seems like we've taken one giant step backwards.

Speaking of multi-agency communications disasters, did anyone catch last nights debacle with DPS and Phoenix PD (alleged rolling gang fight)? I thought for a minute there they were going to resort to smoke signals.

Carl

Howdy all. I am having trouble finding a few frequencies.
I have moved to Picture Rocks, and need the frequencies for Marana PD, and Saguaro National Park Rangers.

I have a few freq. for Pima County Sheriff, but, not sure what ones to listen to here. Or, maybe they use both Mt. Lemmon and Tucson Mt. repeaters here.

Also, if you know any other ones I should listen too, let me know.

Thanks for you time,
Michael

Hi Michael. Just left the Tucson area. Was DXing from Kitt Peak. :-)

Saguaro is 166.35/input 167.15

I have some of the freqs. I collected from others on this list
at http://www.inscoe.org/scanaz then select "Scanning Southern Arizona".
I need to update the list with confirms but just got back in town and
have been very busy catching up on things. More on my trip later.

PS for those on the list I did catch AF-1 at PHX with pics. I will post
them later...

It involved a vehicle that was allegedly being chased by 3 other vehicles full of armed gang members. PPD was in cell phone contact with the victim being chased. They were first reported to be on I10 at milepost 220 (70 or so miles Southeast of PHX) but a District 13 officer correctly surmised that they might be much closer (Firebird Lake area). The interesting part was listening to all three frequencies (PPD ch3 hot,DPS d13, DPS d6)simultaneously with 3 radios and hearing the total miscommunication between them. In fact, less than halfway through the whole event, the D6 units were told by their dispatcher that PPD had the vehicles pulled over and the subjects out of the cars and code 4. Problem was, NONE of the vehicles had even been spotted by either agency yet! I think that if it were not for one D13 unit listening to PPD ch3 on a scanner, DPS efforts would have been useless due to the lag time and misinformation.

IMHO a common frequency would have eliminated a lot of confusion.

Here in Phx we have vhf/uhf interagency repeaters. 155.475/460.375 Both repeaters can be linked allowing Phx PD to talk to DPS and vice versa. Both bands are usually not linked up but can be. It would be nice if in PHX we had an interagency system like is in place in Tucson where vhf/uhf/800 is linked up for interagency.

359. Questions about MCSO and DPS

I've been gone almost a week.

MCSO went digital last Friday,
> mainly ch
> 3. With there system there is a problem with compatibility talking
> to other
> agencies that are not digital.

Heard about MCSO changing. Being digital has nothing to do with the
inability of the dispatchers to patch to the Interagency UHF, which
all the 460 MCSO, Phoenix detectives and all DPS radios have. And the
PD's
patrol radios have Interagency VHF which can be cross-patched at the
county.

I think there were a few problems
> with the
> EM's in the new radios.

Whats an EM?

> Atleast DPS isnt going digital!

DPS Criminal Investigations (detectives) already have the capability to
go encrypted-digital whenever they decide to. Already have infrastructure
and subscriber units deployed.

How is the
> mdt system
> coming along for DPS?

If you are talking about a replacement for the exisiting one, haven't
seen any progress.

See my previous post about the COMMON FREQUENCY.
It's there, just has to be used.

Biggest problem is, ONLY the S.O. has control of the channel(s).

Subject: Re: [ArizonaScanner] Mutual Aid?

Here in Phx we have vhf/uhf interagency repeaters. 155.475/460.375 Both repeaters can be linked allowing Phx PD to talk to DPS and vice versa. Both bands are usually not linked up but can be. It would be nice if in PHX we had
an interagency system like is in place in Tucson where vhf/uhf/800 is linked up for interagency.

There is no intelligent reason for those repeaters not to be linked.

Taliesin

365. Re: [ArizonaScanner] Questions about MCSO and DPS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-29 17:29:19 UTC
From: Dan Rollman
Topic: 359 Message: 365

Thanks for forwarding that, Walter. I'm sure Joe won't mind you sharing your insight with all of us. :-)

In the past, the Tucson area dispatchers always had the ability to patch just about anything into just about anything. Problem was, it was rarely done in a timely manner, and sometimes they just couldn't figure out what channels to patch with what, particularly when trying to link a conventional system to a trunked system, etc. Frequently, the dispatcher would tell units after 5 minutes of work things are all patched-up. They'd switch, and find that they still cannot communicate because something wasn't done right. Seems simple, but the Tri-Band Gateway solved this. Now there is no patching. It is an always-on system that does not need a controller to manually set it up and allow interagency communications.

Also, with regard to CI units using encryption, I think few scanner listeners care if CI type ops are encrypted. I'm sure Joe's comment was meant to explain he was glad that DPS patrol units would not be going digital anytime soon. When I lived in Tucson, I was overjoyed when Tucson PD got digital radios. This was because issuing digital radios to SWAT, Detectives, and Command Staff type folks adds privacy while protecting the scanner hobbyists ability to listen to routine patrol activities. Moving an entire agency to a digital system is both placing officers lives in jeopardy, while at the same time spending far more money than needs to be spent. Considering MCSO cries daily to the board of supervisors about their lack of funding, the second reason is particularly amusing. But Tucson, on the other hand, made the fiscally responsible decision, and one that respects the ability of law-abiding citizens to monitor the activities of the cops they pay for. Walter, your agency, DPS seems to have made the same responsible decisions. Most scanners listeners respect the fact that a small portion of law enforcement communications requires security. This does not, however, include routine patrol communication. While I can't speak for all scanner listeners, most of my friends who are radio hobbyists find it encouraging when agencies like DPS and Tucson PD giving digital and/or encrypted radios to CI type folks only, not routine 24x7 patrol ops. The scanner community should applaud agencies who make these types of informed decisions, and use them as an example for how agencies that move their entire department digital out of fear and the desire to hide, could have done better.

Who'd of thought Tucson would be a step ahead of Phoenix in anything... :-)
Yep, Tucson has their "Gateway Interagency Tri-Band System" or whatever
they call it this week. It uses a VHF/UHF/800 linked repeater system on
Tucson Mountain, so this is still separate from the regular simplex Mutual
Aid channels. All public safety agencies (PD, Fire, Ambulances, etc.) have
access to the Tri-Band gateway, right down to Pima College and the other
small departments. They do a weekly test on Sunday mornings to make sure
the thing works. Something like that could really benefit Phoenix, but then
the question arises of what mountain top to put it on. Unfortunately the
Phoenix valley does not have a single tower site that covers the entire
valley wonderfully as Tucson Mountain does in Tucson. The only way to
effectively do it here would be to have voted remote sites. Now you're
adding $$$. Sure seems like a system that is needed here, though.

368. digital vs analog

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-30 05:41:23 UTC
From: darthmarcus.1@email.com
Topic: 368 Message: 368

The debate seems to be if digital is any good. I use a digital cell phone everyday and it works great, I used analog phones and they sounded like crap. So digital is much better in my opinion and Im not trying to hide my conversations from anyone by useing it they just plain work better. If MCSO wants to use digital technolgy then great for them they have finally moved into the 20th century with everyone else. My computer is digital, it wouldnt work worth a damn if it was analog, correct? So quit whining about it and accept the fact and listen to somebody else until digital scanners come out and then buy one if you want to.

It wouldnt cost that much.. We already have 155.475 460.375 866.0125 why not link those three up instead of putting up more repeaters on different frequencies since agencies are equipped with one of those in there radios?

370. Re: [ArizonaScanner] digital vs analog

Date: 2000-06-30 08:40:27 UTC
From: in2fyr@aol.com
Topic: 370 Message: 370

you are sort of comparing apples to oranges sir.
Next time you take a drive open your eyes and look at how many digital sites are up in the valley to handle digital phones. Now look around to see how many digital sites you see for a public safety system. That might be a good start for you to understand why these systems are failing for public safety use. You cant honestly tell me that your digital phone has never dropped a call. Now, convert that to a public safety radio. I hope the one time a police officer is getting his butt kicked by some low life criminal his radio does not "drop" the call for help. On the other hand, I hope that the new digital radio system never "drops" the dispatch to help one of your loved ones. Conventional Radios systems just seem to function far better than digital systems. Thats the moral of the story.
In closing, as a public safety worker, and scanner listenter, I have gotten some great info from this list.I would suggest if you dont like the topics of the list, you remove yourself from it. Comments have always been welcome on this list, provided they are relevant and logical. Have a nice day!

Mike

In closing, I would like the commend you for not needing to hide your phone calls, but doing such a fine job of hiding your identity on this NON DIGITAL list, by not signing your email and leaving a blank profile in egroups.
On second thought, had i posted a message such as yours, I dont think I would want to be associated with it either!

371. Re: [ArizonaScanner] digital vs analog

If only the issue were as simple as comparing a Motorola radio to a PC. :-) The article was posted as one of many examples of agencies that are quickly finding out that digital radios, at this point in time, simply are not superior to analog radios, as you insist without any evidence that makes any sense. Your comparison to cell phones and PCs is both oversimplified and illogical. It is a very different standard. Note that cell phones use tower sites spaced much closer together that those of radio systems, which is largely responsible for why they don't have many of the holes that many digital radio systems do.

As the article points out, as have other members of this list, agencies like those in Orange County would love to take back their decision to "finally move into the 20th century with everyone else" as you call it. I'm not sure who "everyone else" is, considering digital radio systems (for good reasons) are still quite rare in public safety as compared to analog systems, but none the less. The MCSO deputies I've spoken to would also like to go back to the stone ages as you may call it, and use the radios they used to use that worked.

I'm not trying to be argumentative here, nor am I speaking largely as a scanner listener. Personally, I never listened to MCSO anyway. I found them god-awful boring. None the less, as a local taxpayer, I hate to see wastes of money. Above that, it is disturbing to see any agency place its deputies lives in jeopardy, as deputies themselves (not I) have said they believe these new toys have done.

I too use a digital cell phone and find that it works quite well. I'm not trying to hide my conversations, nor am I trying to hide my identity in this email (hint, hint). It just works. So far, most digital radio systems haven't worked well. I do wonder, though, whether you have ever used a digital radio (not a cell phone or PC or digital clock or digital scale or digital copier, but a radio) in remote county areas with any success.

Something you also have to realize is when you are on your digital phone and go out of a digital area it will switch to analog mode without you knowing then switch back to digital after you hangup if you are in a digital area. Sometimes Analog can sound as clear as digital but works better in mountain areas. Comparing your cell phone to a trunked system coverage is like comparing Airtouch Analog to Voice Stream Analog. Airtouch beats the other company hands down! They have more sites and cover most of Az in Analog. Voice Stream only covers 30% of what Airtouch Covers.

373. Re: [ArizonaScanner] digital vs analog

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-06-30 10:11:22 UTC
From: ravenfalls@aol.com
Topic: 370 Message: 373

Also coverage wise, on your scanner try listening to a vhf or uhf repeater on a mountain top and a trunked system on the same mountain top and see which one works farther. You have to take a radio system that works well with few functions and features to a new system with many features that doesnt transmit as well.

The only proble with that comparision is.............
VoiceStream PCS is DIGITAL ONLY, except where they roam onto
the analog CELL network.

Verizon (Airtouch) no longer has Casa Grande up thru Payson and east
to ShowLow. Now being run by Dobson Cellular.

> Voice Stream only covers 30% of what Airtouch Covers.
>

It's probably up to 45% with the above noted coverage loss.

The first two are already "linked" in Yuma county, and a couple of others

I can't think of right now. And the third is controlled by APS (or is it
SRP)
because they were the first to steup a system in the "public safety"
portion of the 800 band.

Not only that, but the agencies listed are moving from lower frequency
bands,
and from systems that evolved over years and years to meet the
requirements
of the expanding populations.

You lose range going from 460 MHz to 800 MHz.
You lose range going from 5kHz deviation to 2.5 kHz.

And you lose STILL MORE range going from analog to digital.

With digital, the signal is either there or it isn't. With analog, you
can move
into a noisy but usable area.

Unfortunately, most CELL phones (not PCS) fall back to analog when
digital
service is not available. Most people don't pay attention to that, and
assume
they they are 100% digital.

Dan

I'm curious. When was the last time you or anyone in this group has heard the Mutual Aid frequency in Tucson being used? I've been listening for over 8 years here in Tucson and have never heard DPS, TPD, and/or PCSO use a common frequency to help each other out. Quite the contrary, I've heard them talking about the same ongoing incident on their own department frequencies without either department truly knowing what the other is doing.

I asked my wife, a PCSO deputy, if she knew of an occasion where they used the Mutual Aid frequencies. She couldn't give me an incident that she was aware of. My wife knows what the other departments are up to because I bought her a scanner for her patrol car.

As I sit here, I am scanning those three frequencies that you provided. I must say that on one of the frequencies, they are at least transmitting the call letters in morse code every half hour.

Thanks for pointing out these frequencies. I'm going to keep an ear on these ones.

John

Hi John,

I left Tucson a year ago, but before I left, I'd say that Tri-Band Gateway system was used a couple times a month, at a minimum. Keep in mind, the system has only been around about 2 years. Prior to that, all you had was Fire Mutual Aid (154.280), and the police mutual aid frequencies (155.475 and 460.375). Since agencies are all over the spectrum down there (VHF / UHF / 800) they were rarely able to meet on one of those. Fire Mutual Aid was used more than anything.

Now that the gateway system is in place, it is used quite frequently (that's a relative term!) Before I left, I remember hearing it used just by TFD and TPD to coordinate evacuations on a HazMat incident, to name one. This may be too long ago for you to remember, but the last major vehicle pursuit in town before I left was a kid who was taken in to custody, escaped from the unattended patrol car he was put in, ran across the street from the midtown substation, carjacked a lady at a car wash, and led police on a high-speed chase that lasted some two hours, in the womans car, with handcuffs still on. That entire pursuit, once it left city limits, was switch to Gateway. Tucson PD, Pima SO, OVPD, Marana PD, and DPS (I believe) all communicated together while in pursuit at various times.

Also, a few months ago when South Tucson had the big fire at the Soling Tom Center (sp?), they used gateway, since NWFD, TFD, and others were assisting South Tucson.

Ask your wife if she remembers in her old GE radio a talkgroup called "CITCO" or something like that, can't remember how to spell it. That was the gateway channel. Not sure what it is labeled in their new EFJ radios.

Agencies down there were used to never being able to communicate with one another because they were all on different bands. Now that they have a simulcasted system, I believe it is, and will continue to become, more common.

Dan

Dan :)

Thanks for the quick response.

As you suggested, I spoke with my wife and the phrase that you used sounded familiar to her, but she had never used it. She says there is a new channel added to the EFJ's, but they only go there if directed by their communications. This is probably the the 800mhz Mutual Aid frequency.

I would love to hear them use this frequency. I can hear them now by scanning only three of their 800mhz frequencies. I hear a majority of the activity, including stuff my wife doesn't receive. Unlike the old Ericsons, she can't scan the channels in her radio on the EFJ's.

It would be nice to hear every transmission :)

It sounds like I missed a couple of good events. From what you said, it sounds like it is used more often as a cooperative effort between police and fire. We'll see how this pans out.

Thanks again,

John

382. DPS new "Metro" concept

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-02 02:12:41 UTC
From: Dan Rollman
Topic: 382 Message: 382

Hey guys,

After hearing only "Metro-1###" units on 460.325 in Phoenix and "Metro-2###" units on 460.400 today, I did some investigating.

I just got off the phone with the DPS Duty Office. They confirm that D5 and D13 are a thing of the past...
Former D5 is now called "West Metro" with officers designators as "Metro-1###" on 460.325.
Former D13 is now called "East Metro" with officers designators as "Metro-2###" on 460.400.

...flash back to the early 1990's! Anyone remember the old "Metro-1" and "Metro-2" ?? :-)

--- In ArizonaScanner@egroups.com, walter.howard@j... wrote:
> Jeez, tough crowd, My original message was taken way to seriously
it was supposed to be a analogy that digital technology is not
inherently bad in itself. In a properly designed digital system you
would take all the factors that have been mentioned into account when
designing the system. Coverage area etc is all related to where the
sites are located, the antenna height, the terrain, the ERP or power
output, receiver sensitvity and several other factors. Now the MCSO
has a dozen or more sites located on tall mountains the coverage is
very good from these they also have several sites at ground level on
towers these fill in certain areas that were determined to need extra
help. {just like you would design a cellular system} A lot of
engineering went into the design of the system. It wasnt just thrown
up on a whim. Believe me that officer safety is 1st priority and
steps are being taken to fine tune the system. After all its only
been in operation a week and there are some adjustments that need to
me made. This system was designed be a showcase system and it may be
the first one to work right in the county but it will work right!
On more fine point The Iridium Sytem is going to be deorbited very
soon ,if not already started, one of the major reasons for this was
the fact that when it was designed back in the 80`s they had no idea
that digital technology would overtake us like it has and it was an
analog only system, look what has happened to it now its basicly
unusable with current technology today. So digital is here to stay
APCO has designed Project 25 just for Public Safety Use and its not
going away either so the point is we has to accept change and learn
to use it to our advantage.{just like the PC} :}

Freedom of speech only prevents the government from regulating some forms of speech. It has nothing to do with the operations of private enterprise. You were not "blocked out" but rather moderated. This was done within the regulations and tips for eGroups list owners. This means you still have a subscription to the list and receive all emails, however the list owner will approve your postings before they reach the other members of the list. This will remain in effect until you elect to sign your messages with a legitimate name so that others may respond to you, and to keep peoples mail boxes free from inflammatory messages clearly designed to start a "flame war" in the group.

This list has been a very good source of professional and courtesy discussion for many months prior to your arrival. As the list owner, I will not tolerate users violating egroups rules and trying to agitate people by calling comments posted by a large group of people "whining". If a conversation does not interest you, simply delete the related emails upon arrival, or unsubscribe from the list, but do not reply to them by calling the people having a legitimate conversation about our hobby "whiners".

I have not in the past ever had to moderate messages posted by anyone on this list, due in large part to the fact that no one has ever before posted a message that is anything less than courteous discussion and reply. Darthmarcus (I use that name because we still do not know who you are), you are welcome to disagree with anything said on this list. However, as the list operator, I will not tolerate messages that are rude and have the potential to turn a once-useful list into a giant flame-war. We all get enough trash email in our inboxes. Anyone who has browsed public newsgroups like rec.radio.scanner knows what happens to a list when people come along with the intent to get a rise out of people and just generally be rude and obnoxious. I will do all I can to help this list respect peoples inboxes and not fill them with flames.

Darthmarcus, you are welcome to continue to post on this list, provided you can tone down your messages and eliminate name-calling and foul language. Again, disagree away, but do it in a courteous manner.

Dan

I'm hearing some traffic on 460.525, which is a repeater frequency licensed
to the State. Sounds like a simulcast of the dispatcher that is working
D-6, but might want to keep it on hand.

Dan,
I heard a D-13 car to car conversation in which one unit told the other
that the new call is METRO plus the last 3 digits of the OLD call sign.
For example 1325 now becomes METRO-325. Are the boundaries the same as the
old system?

>...flash back to the early 1990's! Anyone remember the old "Metro-1" and
>"Metro-2" ?? :-)

I do remember that. Was it on 460.425 or something like that?

Have a great 4th.

395. RE: [ArizonaScanner] Mutual Aid?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-02 20:18:11 UTC
From: Curt Steger
Topic: 357 Message: 395

When I was a policeman in the Chicago area we had several mutual aid frequencies. All on VHF high band. They were ISPERN (Illinois State Police Emergency Radio Network), Point-to-Point, and MABAS (Mutual Aid Box Alarm System) for the fire departments. All agencies in the state, to include their squads had all the frequencies. The standard procedure was, as soon as you left you jurisdiction you switched to ISPERN and the State Police coordinated all traffic.

Also, ISPERN was used to broadcast other traffic, such as officer safety advisories and current criminal activities where the suspects might have left the local jurisdiction.

A system such as this would have worked well during this incident.

I am listening today to the Arizona State Land Department
repeater in Tucson on 151.415.

Someone comes on moderatley frequently and states:
"Code Brown". Thats all, no talk or hint of who what where or why.

Anyone know what code Brown means?

My SW Freq Dir does not appear to have Land Department codes in it.

Thanks

Mark

From: John Schmich
Topic: 399 Message: 399

Hi All,
Today I was testing the reception of my BC245 using the 3 antennas I have; a Diamond RH77CA portable, a Larson 150/450 MHz Dual Band on my car, and an Antenna Specialists MonR in my attic.
I used the NOAA weather service as a reference and was able to pick up
162.400 Tucson, 162.550 Phoenix and 162.500 South Gila County. (I live
near Marana) The WX service broadcasts continously so it was easy to compare reception.
Are there any other stations that broadcast continously on UHF or 800-900? Or any other suggestions for me to compare reception qualities of antennas and distance from stations.
Thanks, John Schmich

John,
If you're using VHF, I always use the WX channels for testing.
Their signal seems to be at an even level, wherever I have heard it.

I have used the A/S monitor antennas for years. Good gear as are the Grove
Beam (for looooong reaches) and the Diamond discone.
As I'm usually located in a "country" atmosphere, I always use a preamp....
preferably one with adjustable gain like the Grove Pre-5 or the RS masthead
TV preamp that has a screwdriver adjustment in the base unit.

Hope this helps.

Cheerios,

Temp
In SBA or SDZ/SEZ

Subject: [ArizonaScanner] Antenna Testing

Hi All,
Today I was testing the reception of my BC245 using the 3 antennas I
have; a Diamond RH77CA portable, a Larson 150/450 MHz Dual Band on my
car, and an Antenna Specialists MonR in my attic.
I used the NOAA weather service as a reference and was able to pick
up
162.400 Tucson, 162.550 Phoenix and 162.500 South Gila County. (I
live
near Marana) The WX service broadcasts continously so it was easy to
compare reception.
Are there any other stations that broadcast continously on UHF or
800-900? Or any other suggestions for me to compare reception
qualities of antennas and distance from stations.
Thanks, John Schmich

If 900 Mhz is not your upper limit, try these.
934.9125¦FM ¦Unknown music broadcast ¦Jazz music
907.5125¦FM ¦Muzak ¦
928.9125¦FM ¦Muzak ¦

The 907 and 928 freqs. are the same transmission.

From: Dan Rollman
Topic: 391 Message: 404

Hmm, I wonder. I know that we have heard 100, 200, 300, and 400 Metro units. What is odd, though, is that the 100 and 200 units would not fit the example below. I was thinking perhaps it has something to do with the "shift". 100's = days, etc. Anyone noticed any similarities there?

.
" Are there any other stations that broadcast continously on UHF or
800-900? "

For UHF try 410.100
It is an uplink to the 162.4 NOAA broadcast for Tucson.

From: David Bohmke Jr.
Topic: 406 Message: 406

Hello to the group I just got back from my vacation in San Diego, while there I spoke with Fred White the maker of Scan Fan the local frequency directory and asked more about this new scanner Uniden is working on. Fred saids it is under going finnal testing and all that needs to happen now is work the price down so we all could aford it. Right now the retail is around $500.00 so as soon as something can be worked out with the price we should see it on the market by the end of this year if all go's well? San Diego county gov. and other local cities have completely moved all it's radio traffic to the RCS system so the media had to buy the $2,000 radio's to keep up on the news there, this same thing happened when San Diego city went trunked in the early 90'es they spent so much money on those Motorola radio's more than there own 450 mhz system then soon after the Trunk Tracker hit the market. I hope to have more information on this subject soon
More to come later

Rough figuring by DPS is that we would have to AT LEAST DOUBLE the number of mountaintop sites to go 800. $$$$$$$$$$

> Now the MCSO
> has a dozen or more sites located on tall mountains the coverage is

Actually it's only 7.

> very good from these they also have several sites at ground level on
>

No, only the S.O has been on it that short a time. It's actually a County system,
and the S.O. is a customer. Most of it's been up well over a year.

>
> me made. This system was designed be a showcase system and it may be

Boundaries are the same.
East is old 13, central is old 5, west is old 14.

Cross-patching is the norm except during drive-time.
d5/13, d14/1/state/ci.
other combinations as dispatchers need breaks.

freq's
east d13 460.400 (same as d4)
central d5 460.325 (same as d3)
west d14 460.300
phx1 ci1 460.275 (same as ci3)(usually encrypted)
phx2 ci2 460.500 (clear voice admin channel)
state state 460.225 (all areas of the state)
pinal5 new 460.525 (pinal county ci operations)

Hi Dave,
Thanks for the info! Just wanted to confirm, this is for a new DIGITAL scanner, and this scanner is totally different from the BC780XLT TrunkTracker II (analog only) that is coming out in a few months. Orders are already being taken for the BC780XLT (TrunkTracker III, Alpha Tags, CTCSS, 500 channels, PC control, etc.) and the price is right around $360. I already placed my advance order for two of them, with a couple more to come once I am satisfied with the model. I will certainly let the group know how the 780 works as soon as I get mine.

But I did just want to confirm that Fred's info was on yet another model that is DIGITAL capable, after the 780 comes out ??

Thanks again,
Dan

Hi Walter,

Thanks for that great info! The Duty Officer gladly shared with me the basics, but wasn't real specific on a few things, so that helps. Now if you have any clue on the pattern for unit designators we'd all understand the thing completely! That's the only stumper now. :)

By the way, the "Pinal 5" CI channel is new to me! Was shocked to her chatter on it when I came across it a few nights ago. Are there any other special channels like it operated by DPS? (Beyond the standard district, CI1/3, CI2/4, and State channels) ?

Thanks very much!

Dan

413. DPS District 8 is using "King" Callsign

Yahoo group: ArizonaScanner (1999 — 2002)

Topic: 413 Message: 413

Well, looks like District 8 will be following suit and making callsign changes.

Just heard them trying to catch a convertible doing over 100. King-100 and King-833. Most of the units are still just saying 8xx callsigns without any prefix. They are still on 460.425.

John

"King" is the new prefix for K-9 units.
Previous callsigns were TACXXX.

416. New DPS Callsigns

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-04 01:08:28 UTC
From: FLANO
Topic: 416 Message: 416

Is someone compiling a list of the new callsigns versus the old DPS callsigns?

Just heard another one - Pace-112.

Thanks,
John

From what I understand of what was told to me this new digital only scanner is in the handheld version only with another digital add on board for base scanners, as far as which base scanners it will be for I don't know? This scanner is not yet available and is still being tested in the field,prototypes have been tested and they work. As far as what schemes will be covered I understand Motorola Smartzone and Smart net II digital are covered and most likey only public safety non encrypted formats no Nextel or anything like that but this could change but Fred said's no,for now they are working on lowering the price which means only covering what is most popular Public safety. For those of you who like using Motorola radios to monitor public safety you can buy a Motorola digital trunked radio on E-Bay or another sorce and program it yourself like he is doing and it works well the software and rib cables are not as hard to come by as some might think. I will post any new information I get on this subject and on my next visit later on this month I will ask more questions to clearify all this. But I have been asured this new digital scanner does exist.

NEW LANGUAGE APPEARS LIKE THIS
Stricken language appears like this
Remaining language appears like this

SB1104 - 441R - I Ver
Reference Title: Arizona rangers
AN ACT
AMENDING TITLE 41, CHAPTER 1, ARTICLE 1, ARIZONA REVISED STATUTES, BY ADDING SECTION 41-109; RELATING TO THE ARIZONA RANGERS.

Be it enacted by the Legislature of the State of Arizona:

Section 1. Title 41, chapter 1, article 1, Arizona Revised Statutes, is amended by adding section 41-109, to read:

41-109 . Arizona rangers

A. THE GOVERNOR MAY SERVE AS THE EX OFFICIO CHIEF OF THE ARIZONA RANGERS. AS THE EX OFFICIO CHIEF OF THE ARIZONA RANGERS, THE GOVERNOR MAY EXERCISE THE SAME POWERS, INCLUDING VOTING, AS OTHER MEMBERS OF THE BOARD OF GOVERNORS OF THE ARIZONA RANGERS. THE BOARD OF GOVERNORS AND THE BOARD OF DIRECTORS OF THE ARIZONA RANGERS GOVERN THE ARIZONA RANGERS AS PROVIDED IN THE BYLAWS OF THE ARIZONA RANGERS.

B. THE HEAD OF ANY STATE DEPARTMENT OR AGENCY MAY REQUEST THE ARIZONA RANGERS TO PROVIDE ADDITIONAL MANPOWER FOR SECURITY, TRAFFIC AND CROWD CONTROL OR OTHER SERVICES AS FOLLOWS:

1. IN TIMES OF EMERGENCIES OR DISASTERS, INCLUDING FLOODS, FIRES, EARTHQUAKES, TRAIN, AIRPLANE AND HIGHWAY ACCIDENTS, RIOTS, INSURRECTIONS, BREACHES OF THE PEACE, TERRORIST ATTACKS AND OTHER CRIMINAL INCIDENTS AND IMMINENT PUBLIC DANGER.

2. FOR SPECIAL TASK FORCES.

3. ANY OTHER CIRCUMSTANCES OR OCCASIONS DEEMED APPROPRIATE BY THE GOVERNOR, THE DIRECTOR OF THE DEPARTMENT OF ADMINISTRATION OR THE HEAD OF THE REQUESTING DEPARTMENT OR AGENCY.

C. THE ARIZONA RANGERS SHALL BE UNDER THE SUPERVISION, INSTRUCTION, DIRECTION AND CONTROL OF THE REQUESTING DEPARTMENT OR AGENCY.

D. PROVISION OF MANPOWER OR OTHER SERVICES BY THE ARIZONA RANGERS AS PRESCRIBED IN THIS SECTION IS SUBJECT TO THE APPROVAL OF THE STATE COMMANDER OF THE ARIZONA RANGERS. THE STATE

COMMANDER OF THE ARIZONA RANGERS IS AN ELECTED POSITION WITHIN THE ARIZONA RANGERS PURSUANT TO THE BYLAWS OF THE ARIZONA RANGERS.

E. ARIZONA RANGERS ARE NOT ELIGIBLE TO PARTICIPATE IN FUNDING PROVIDED BY THE PEACE OFFICERS' TRAINING FUND ESTABLISHED BY SECTION 41-1825 OR IN THE PUBLIC SAFETY PERSONNEL RETIREMENT SYSTEM.

F. THE DIRECTOR OF THE DEPARTMENT OF ADMINISTRATION MAY ISSUE AN IDENTIFICATION CREDENTIAL TO EACH MEMBER OF THE ARIZONA RANGERS. THE IDENTIFICATION CREDENTIAL SHALL BE SIGNED BY THE GOVERNOR AND THE DIRECTOR OF THE DEPARTMENT OF ADMINISTRATION. THE DIRECTOR OF THE DEPARTMENT OF ADMINISTRATION MAY CHARGE MEMBERS OF THE ARIZONA RANGERS A FEE FOR THE IDENTIFICATION CREDENTIALS.

Sec. 2. Purpose

The purpose of this act is to recognize the Arizona rangers who formed in 1901, disbanded in 1909 and were reestablished in 1957 by original Arizona rangers. The Arizona rangers are an unpaid, all volunteer, law enforcement support and assistance civilian auxiliary in this state. The Arizona rangers were established in 1957 to provide law enforcement support and assistance, youth support and community service and to preserve the tradition, honor and history of the 1901-1909 Arizona rangers.

OK, to answer your question of the "Code Brown", it is not an official code at all, but rather a prank played by those within the State Land Dept. The likelihood of you hearing that code again are slim to none. It's technical meaning is "Oh, s@%t!"

In my department (in Southern California) firefighters use this code among them selves as an unofficial slang term for a "Back to Bed" call. The reason for this is because people who require our assistance on these calls often fall while getting on and off the toilet and by the time we arrive they are covered in their own SH*t. Needless to say, these calls are the probably the worst that we go on.

429. Tribune Article - MCSO Digital System

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-07 19:03:55 UTC
From: Mike ICP803
Topic: 429 Message: 429

From The Tribune -- July 7, 2000 -- by Garin Groff

SHERIFF GETS DIGITAL DISPATCHING SYSTEM

Maricopa County sheriff's deputies are switching to a new $30 million communication system that boosts their security - and keeps the public from eavesdropping on their activities.

The equipment gives the sheriff's office room to grow and improves the quality of the broadcasts. But the office also likes that the public, and criminals in particular, won't be able to hear a word of the radio broadcasts that they've listened to for decades.

"Why should we have everybody listening in on our operations?" Sheriff Joe Arpaio said Thursday while showing off a new communications center at his downtown Phoenix headquarters.

The old radio technology allowed anybody with a scanner to listen to radio traffic between deputies in the field. This meant anybody tuned to the correct frequency could hear descriptions of criminal suspects and where deputies were going on a call.

Criminals heard the same thing.

"We have often found suspects, who we were looking for, had a scanner," said Sgt. Dave Trombi. "It's not that hard to listen in."

A burglar with a scanner could hear if a deputy was in the area. Trombi said, giving him an edge over law enforcement.

The new technology ends that. The Motorola Smart Zone digital system allows only radios programmed into the sheriff's system to send and receive signals.

Law enforcement agencies across the nation are switching to similar systems because the federal government is forcing them off the analog frequencies they currently use. Valley police and fire agencies will eventually switch over to similar systems, but the sheriff's office is the first to do so.

While anybody can buy scanners for the analog frequencies for about $250, devices for the new ones aren't available yet.

A scanner for digital frequencies will probably be available someday, allowing the public to listen. But Arpaio said he would block access by encrypting the signals.

"It's almost impossible to decode that," said Harold Darr of Motorola, a project manager on the system.

Deputies have switched to the new system gradually during the last two weeks. The transition will be complete by next week, ending public access to the office's broadcasts.

Also in the dark will be news organizations, which listen to radio broadcasts extensively to monitor breaking news. Arpaio said that he will consider granting access to news organizations but added that he hadn't thought of the issue until Thursday.

The public has a strong interest in listening to police and fire broadcasts, said David Means, who works at a Radio Shack store in Mesa. Scanners are popular items, he said, and the demand will probably prompt manufacturers to develop new scanners soon.

People who buy scanners consider police broadcasts a form of entertainment, Means said. The devices are especially popular among senior citizens.

"They just like to listen to it on their headphones," Means said.

From The Tribune -- July 7, 2000 -- by Garin Groff

SHERIFF GETS DIGITAL DISPATCHING SYSTEM

"Why should we have everybody listening in on our operations?" Sheriff Joe Arpaio said Thursday while showing off a new communications center at his downtown Phoenix headquarters.

I don't know about anybody else, but it was my ability to listen to the NYPD on a scanner that twice kept my partner and I out of danger while we were in our Non-EMS (private company) ambulance. Once was a bomb threat at the main post office in Manhattan and the second was a man walking down the street with an M-16 only a few blocks from us. Suffice it to say that my scanner saved our lives those days. It also helped us back up E.M.S. ambulances a couple of times as well.

The public has a strong interest in listening to police and fire broadcasts, said David Means, who works at a Radio Shack store in Mesa. Scanners are popular items, he said, and the demand will probably prompt manufacturers to develop new scanners soon.

People who buy scanners consider police broadcasts a form of entertainment, Means said. The devices are especially popular among senior citizens.

Then there are those of us, like me, who like to hear that our police and fire departments doing their job because it gives us a sense of security and lets us know if something is happening in our neighborhood so we know if we need to prepare to eveacuate or just duck below window level to avoid stray bullets.

This sucks. Sure,SWAT and undercover operations should be encrypted,whether they use an analog or digital system. But,everyday patrol operations should not be. Law-abiding,taxpaying citizens should be able to hear what their law enforcement agencies are doing. And if law enforcement agencies want citizens to be more actively involved in being the eyes and ears for them,how can we do it if we're locked out from information regarding what is happening in our neighborhoods? We can no longer hear descriptions of persons or vehicles being broadcast. We can't make a mental note of those descriptions,and then call 911 if we observe a person or a vehicle matching that description.

And I'm curious to know just how many criminals really do use scanners to stay ahead of law enforcement. Is it THAT prevalent? And what do the deputies on the street think? How do they feel about citizens listening in?

Lastly,possible Sheriff id's that I have heard digital traffic on:

43120 (busy,3-5am July 9th)
43152
43248 (very busy,3-5am July 9th)
43408
43414 (? only heard once,may have been 48414)
43440

46603 in the clear. Just heard it now. Unknown agency. Definately police.

I have not been able to find even ONE news article in which a criminal was able to evade police by the use of a scanner in AZ. Nor could I find even ONE news article where a police officer was injured, or even endangered by criminal use of a scanner in AZ.

These excuses are just meant to appeal to the uninformed masses. There HAVE been cases where criminals were listening to scanners when they were being arrested, and they did not even know that the police were coming for them.

The REAL problem, unfortunately, is that not enough people go to budget meetings and thoroughly examine just what these agencies are asking for. There have been so many failures of Digital systems nationwide, and NO EVIDENCE to justify encryption of communications. If WE would just get more invloved in how OUR money is being spent, we could stop these inane attempts by petty tyrants such as Arpaio.

Get the FACTS out to the newspapers, including the FACT that they will have to spend upwards of $2000.00 for ONE radio to monitor these communications, and I believe that they could be a powerful force in informing the public that these systems are grossly over-priced, unreliable, secretive, and life-threatening wastes of money designed to inflate the ego's of incompetent administrators that get some vicarious thrill out of the words "digital" and "encryption." I guess it makes them feel that what they say is just as important as the FBI discussing the location of a terrorist as they track his vehicle.

Jim

Jim,
You make excellent points. Getting MCSO to "take back" their system and go analog if probably not going to happen, given that the money has been spent. But you are exactly right that people could make a HUGE difference if they went to board of supervisors meetings, etc., equipped with a binder full of newspaper clipping from other "digital cities", as well as other facts and charts. I remember watching the Pima County board of supervisors on the local public access channel in Tucson approve the switch from (monitorable) EDACS to (unmonitorable) Enhanced LTR EF Johnson system. The board got a presentation from an EFJ official, and a sheriff's department official, both of whom were obviously all for the new system. Not a single downfall to the new system was mentioned by these presenters, and no one else stood for a formal presentation with good, hard facts.

Since November, a friend at PCSO has told me that 2 "999's" and many more "urgent assist!" calls have gone unheard because the radios failed. Those deputies who can remember the days of the VHF system (1980's) say they'd LOVE to go back to VHF, but they'd settle for the old EDACS system that sucked but "worked more often then these" (referring to the EFJ radios).

Now of course I regret not taking part in that Supervisors meeting.

Just finished listening to Phoenix PD, Avondale, Goodyear, and of course MCSO following a possible suspect from the
officer shooting last week south of Tolleson. PhxPD Firebird was trying to communicate with MCSO but they don't have
digital radios up there in those helicopters (yet anyway). Seems like a real waste with none of the other agencies
being able to monitor or talk with them. Not only are they blocking out all of the "evil criminal scanner listeners"
they are blocking out every cop on the street with a scanner who could be comming to thier aid in a desperate
situation.

From: deplee
Topic: 176 Message: 445

Sorry I have to stay anonymous, at least five years ago we were told that the FCC. was making MCSO to go to 800 Meg. I knew it to be false.So I called the FCC. then at 800-225-5322 and spoke with Mr. Rick Henderson who by now probability moved on, he said that MCSO was grandfathered on the UHF frequencies in fact if they wanted to they could licenses more.This information was passed on to the person in charge of the change over. What she did with it I have now idea.States such as N.J. and S.C. have learned the hard way that the only way this type system no matter how basic will never work with out the use of satellites and MCSO will have all the bells and whistles.I was also told that MCSO will lose all UHF freq.as of 12/31/2000 and there is another agency waiting for them.

Topic: 447 Message: 447

The transition to narrowband channel spacing must be accomplished by January 1, 2005 for the VHF band, and January 1, 2007 for the UHF frequency band.
Goodbye Fire Dept's.

This effectively doubles the number of channels/frequencies available.
Why? They won't use all channels available now. Witness the recent dialog re: mutual aid freq's.

Due to the very large anticipated investment in digital radios, and the potential to realize significant cost savings.
Am I the only one who sees a conflict in this statement. Cost savings? Will someone explain to me how these idiots will realize significant cost savings. My God, those morons living inside the beltway have a "John Doe citizen" deep pocket philosophy. Like the Energizer Bunny, they never give up.

Today (7/9), I was told by a RadioShack employee that the Pro-2067 will have digital capabilities, enabling it to trunk non-encryted Motorola systems. The question I have is, is this true? I assumed that Uniden would be the first brandname to come out with such a receiver and while most of the Pro series scanners are in fact Uniden, I wouldn't expect a first generation digital scanner to carry a Tandy brand. I have the worst feeling that the 2067 will be nothing more then a desktop version of the Pro-92.

Any feedback on this would be great.

This is a first that I have heard that rumor, all I have heard is that the Pro2067 is a GRE base/moble (Pro92 with some of the bugs/features fixed). I seriously doubt that it will have digital capabilites, RS sales people usually refer to any scanner with a LCD frequecy display as "digital" meaning digital readout.

Well, that's kind of what I thought. Though I doubt that GRE based scanner will ever be as good as the Uniden models. I have the 245 and the Pro92 and have had the chance to compare. Anyway thanks.

Arpaio is an asshole and I've never dealt with him or his people.

Just seeing him posturing on the TV convinced me of that.

Real nice. You don't even know him, but you judge him by what you see on TV. I don't want to tilt your view of the world, but sometimes what you see on TV doesn't totally reflect reality. I hope this information doesn't lead you to a nervous breakdown. Maybe you need to get out into the real world and meet some people, instead of conforming all your opinions to what you see on TV.

Or maybe you've been reading too much of the slanted "journalism" in the New Times?

457. A simple request please

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-10 14:33:19 UTC
From: Dan Rollman
Topic: 436 Message: 457

Folks,
Let's please keep things on topic here. I realize many of you think calling Sheriff Joe names is directly related to the discussion of a digital radio system. None the less, it doesn't serve to inform scanner listeners, and its not quite what this list is for. I suggest anyone interested in continuing this bashing and name calling create their own list at egroups. I just checked, and the name BashSheriffJoe@egroups.com is still available, if anyone wants to start that list up.

Please keep the posts here on topic and specifically related to scanning. As I've said before, we all get enough junk email, and the 200 or so members of this list don't need to see 10+ messages per day containing nothing but little flames wars.

Another idea... if you must respond to someones message to ask them something like how frequently they've been in jail, or inquire about why they feel the way they do about certain public officials, or otherwise respond to pointless comments, simply reply to them individually, by selecting their "from" email address rather than sending to the group as a whole.

I appreciate everyones cooperation in keeping things on topic, and directing that comments the whole group doesn't need to see, specifically to individuals.

Thanks,
Dan Rollman

I was happy to find a web site dedicated to Public safety frequency monitoring in Arizona, and glad to become a member. A little background for those interested...I was an Arizona resident for 10 years, in Phoenix. I spent some time in-service with the Arizona Department of Public Safety(DPS), and almost 10 years in loss prevention & security management in Phoenix and around the valley. I have been a dedicated public safety radio monitor since 1974, and have amassed a vast amount frequency information on local, state and Federal public safety agencies, and other areas of the public interest. I am willing to share any public accessable frequency information, and will respond to any posted messages with any info I have of relevance. I have complied 25+ years of frequency information, in Arizona, Nevada, New Mexico, Colorado and Wisconsin & Florida. I also have pages of info about Private radio services (organizations, malls, property management companies, etc), Utilities (electric, telephone, gas, cable), Transportation(air, buses, trains, taxi), Land management(parks, recreation, forests, historical sites), Military(army, navy, marines,air force, coast guard), Medical (hospitals, EMS, doctors, vets), Entertainment(zoos, theme parks, casinos, public attractions) and ham & CB radio. I was also stationed in Nevada while in the Air Force and we all know what happens in the desert there. I will be happy to share with any members the info I am lawfully able to share. Please post a message to the boards. Thanks!

Buy that man a cigar! I have the 2067 and no it is not a digital scanner, it's not even a good trunktracker. It's an EXCELLENT conventional radio though and is now in service in my shack as the primary scanner for DPS and Phoenix PD and Fire.

Still awaiting the big switch in Phoenix to the new 800 system. No activity yet... my 2052 hungrily waits 24-7 for that first data channel to light up....

I agree with Dan... enough.

Joe is simply thinking like a cop. All my officers are now on
a "secure" radio system thereby making me feel more "secure" about
them as they do their jobs.

Instead of calling him names here (which is easy to do considering we
mostly all agree) do the more mature thing and email Joe directly.
Don't call him names either, the last thing we as hobbyists need is
for him to feel that much better about flipping that "encrypt"
switch. Rather, let him know about the problems that have been
reported around the country, and that we as taxpayers want to know we
got our money's worth. I don't want to read about (or even worse yet,
shoot the video coverage of) an MCSO officer killed in the line of
duty because his radio failed.

Let's be the voice of reason instead of the voice of hate.

Now back to the topic.

-Phil

461. Re: [ArizonaScanner] DPS new "Metro" concept

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-11 21:31:06 UTC
From: walter.howard@juno.com
Topic: 391 Message: 461

Back from vacation!

Here's the scoop.

With the new Director came a reorganization.
The new Central Operations Bureau Commander (there are no
captains or majors anymore) is realigning the 3 metro patrol districts.
Motors (District 7) hasn't changed.
Metro East (D13), Metro Central (D5), and Metro West (D14) haven't
changed boundaries.
But now there are 2 "shifts" on days and 2 on nights.
Lieutenants are on 12 hour shifts, so there is a supervisor on 24/7.
Patrol areas have expanded, for example a West unit can roam from
Black Canyon City to Buckeye.
The previous message alluding to using part of the old callsign,
doesn't apply. It was just a coincidence.

You will hear callsigns like "PACE XXX" or "HPB XXXX".
These non-enforcement units.
3 digit numbers are unit designators within the section.
4 digits are "badge" (employee ID) numbers

HPB - Highway Patrol Bureau civilians
PACE - Public Affairs and Community Education
DARE - Drug Abuse Resistance Education
PHOTO - Photo Lab
TCD - TeleComm Technicians/Engineers
SOU - Special Operations Unit (SWAT)
IA - Internal Affairs
SIU - Special Investigations Unit (outside agency investigations,
criminal acts by DPS employees)

Any others you can't figure out, ask.

Also, listen to districts NOT in the area for special activities.
For example, D12 Car-Car is used for Diablo Stadium security
during football season.

Walter Howard
TeleComm Supervisor
Arizona Dept. of Public Safety
"Courteous Vigilance"
All opinions expressed are personal, NOT THE DEPARTMENT'S!

463. I didn't know DPS could fly!?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-12 02:22:27 UTC
From: John Schmich
Topic: 463 Message: 463

This morning I heard a conversation that surpised me. About 10:20 I heard: went about like this
Air 140 to District 8
District 8, Air 140
Do you have any units near I10 WB at 254 mm?
(Dispatcher) Any unit WB I10 near downtown?
(Unit responding) I'm at Broadway and Campbell
(Dispatcher) Air 140, what do you need?
(Air 140) There's a white mustang doing 80 plus and weaving in and out of traffic. Unit 8-XX to far away, can't get here in time.
Air 140, 10-4, 10:22
End of transmission
Surprised mainly because I didn't know AZ DPS had aircraft!
Usually a state with highway patrol aircraft uses them for speed control on the Interstates with white lines painted evey quarter mile and I've been scanning here long enough to know if they were doing that. Also I don't think it was a helicopter because I did not hear any noise in the background that sounded like a helicopter. Anybody else have any information about DPS flying craft?
John Schmich

DPS operates numerous aircraft throughtout the state!

They have some the finest helicopter pilots in the industry as well as fixed wing.

All of the DPS helos are referred to as Ranger XX
as well as the fixed wing aircraft.

DPS also operates the Governors plane which is referred to as King Air 1.

I believe the airXX units you hear are the crew members when they are on the ground away from the aircraft.

Perhaps the resident DPS expert on this list can fill in any blanks that I might have left!

Mike

PS the Ranger Units are used for patrol, medevac, and an array of other things also

It won't do any good to send email to the Sheriff. The radios have all been purchased and they are digital. The Sheriff has made it clear that he doesn't want anyone to be able to listen in, so we won't be able to. By sending email to him, you will just establish all of "us" as nutcase scanner listeners. It's best to just let it go and move on to the next topic. Besides, it's his system, so he can configure it the way he wants.

By the way, I don't think it's fair to allow the Sheriff-bashing messages to go out to everyone on the list, then ask me to take it to private email when I try to present the other side of the story. But hey, that's just my viewpoint, I could be wrong.

If you'll notice, this is ONLY for the Department of the Interior, and
it's
sub-agencies, i.e. National Forest Service, BLM, National Park Service,
etc.

The FCC mandate is ONLY for narrowbanding (spectral efficiency).

The digital decision is for the NTIA regulated agencies.

NTIA is the equivalent of the FCC for the federal government.

Topic: 464 Message: 472

DPS runs Air Rescue units in Phoenix, Flagstaff, Kingman, Tucson.

Rescue runs have priority, then assistance internaly (such as radio
maintenance) and only then can they do law enforcement activities.
With them cross billing me at $367/hour, it adds up real quick.

I've flown several times in various "Rangers" (we fly only Bell
JetRangers)
but never had an opportunity for a fixed wing flight.

Got to our website for pictures of our newest bird.

http://www.dps.state.az.us/digest/2000/04/heli.htm

And for some other pics, including an older bird

http://www.dps.state.az.us/photos/welcome.htm

And yes, "AirXXX" is someone NOT in an aircraft.

Topic: 464 Message: 474

Walter No doubt you are the expert on DPS but dont get people confused

The new helicopter is a Bell 407 and not a Jet Ranger
There are huge differences in performance and abilities.
The 407 is a far superior Aircraft over the Jet Ranger.

MCSO Fox 1 and 2 are also Bell 407's

Mike

475. Re: DPS new "Metro" concept

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-12 19:07:49 UTC
From: John H. Guetherman
Topic: 382 Message: 475

Mr. Howard,

I know which district the Metro 100,Metro 300,and Metro 400 units belong to. I have heard Metro 200 units as well,usually on the Metro East channel. Who are they?

I have also noticed that 300 and 400 units are using the Central channel a lot. These aren't just simulcasts from the Metro East or West channel on the Metro Central channel. They are operating on Central. Why is that?

And personally,I liked the original setup better. It just seemed easier to keep track of everyone. I guess I'm just going to have to get used to the new setup.

Lastly,how difficult would it be to acquire an area/beat map for each district,showing the boundries of each area within a district? I'm particularly interested in D14/Metro West,as I live in Peoria,but the other districts would be of interest as well.

Thanks for your help with this info.

--- In ArizonaScanner@egroups.com, "Danny McLean" <d952@m...> wrote:
...[snipped: a lot about helicopters]...

I noticed a slight mixup about some of the Maricopa County
helicopters in the latest edition of the directory.

Phoenix PD uses two different callsigns for their birds:
Phoenix PD:

Air## is used on the Phx PD frequencies. The ## is the hour at
which time the crew secures.

When they go on other frequencies, they call themselves Firebird #,
where # is the last digit of the tailnumber, I believe.

--

Mesa PD calls themselves Mesa Air # (I've only heard 3 and 4) on
other frequencies, Air # on their own frequencies, and Falcon # on
the aircraft frequencies.

--

MCSO main helicopters are Fox 1 and Fox 2, I think there's a Fox 3
but I don't hear it much, and every once in a while there is a Fox
4. Fox 6 is a helicopter maintained and operated by the Aviation
Posse. Fox 10 is a fixed wing aircraft. (Everytime I hear the
callsign, I think it's the television station helo !!!)

They don't "belong" to any paticular radio district anymore.
Depends where their squad's "beat" is.

> I have heard Metro 200 units as well,usually on the Metro East
> channel. Who
> are they?

Day shift #2
Metro 1XX is day shift #1
Metro 3XX is night shift #1
Metro 4XX is night shift #2

The whole concept is different than anything we've had before.

485. Tucson - AWA Pilot -- Air Rage Interrupts America West Flight

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-14 15:01:05 UTC
From: Kevin P. Inscoe
Topic: 485 Message: 485

*** AWA Pilot -- Air Rage Interrupts America West Flight

T U C S O N, Ariz., July 13 ? An America West flight traveling from Phoenix to Austin was forced to make an unscheduled landing in Tucson because of an unruly passenger. The passenger happened to be an America West pilot. A witness told Phoenix television station KSAZ that Brantly G. Meyers was yelling ?Get away from me? over and over Wednesday. Meyers, 51, lives in Prescott Valley and has been a pilot with America West for 13 years. ?He was apparently yelling and screaming. He was very strange, speaking in ways that didn?t make a lot of sense,? Detective Sgt. Phillip Young of the Tucson Airport Authority told the Arizona Daily Star.

From: Nick Nicholson
Topic: 486 Message: 486

Hi all:

I'm fairly new to the Phoenix metro, and am just figuring out who covers which area, and so on. At present, I tend to listen to a lot of Scottsdale PD, since I'm sort of in that area (Fountain Hills). I also have the MCSO freqs, and still pickup a little traffic from the FH MCSO branch. Mostly it is quiet there, which I attribute to their going digital with the rest of the department.

Does anyone know the freqs for the Fountain Hills Marshals? I've scanned for awhile, and not picked them up at all. What about interagency freqs as well (ie, how does MCSO communicate with other departments that *aren't* digital)? I know - the easy answer to the latter is probably "poorly"... :)

Thanks in advance,
<lurk mode on>

487. RE: [ArizonaScanner] MCSO, etc.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-14 17:29:02 UTC
From: Danz, Dan
Topic: 487 Message: 487

I too live in Fountain Hills ... and lament the loss of the ability to hear what MCSO folks are doing in my neighborhood.

1) Fountain Hills marshalls Dept is on the same TRS that you're receiving Scottsdale PD on ..
They're in block 7, size code S3.
706-1 is Ch 1 FHMD dispatch
706-2 is Ch 2 FHMD Tactical
706-3 is FHMD, unknown use
706-5 is Fountain Hills Govt
706-6 is Fountain Hills Streets Dept

2) Criminal Law enforcement in FH is handled by MCSO; Marshalls enforce city ordinances, etc.
At the present time, MCSO has shifted to all digital for this area, except for an occasional transmission on the old Ch3 Eastside (460.150) (soon to go away) and Search 8/Lakes 159.09 (which will be retained). The helicopters have yet to be fitted with the new gear, and still use Channel 8.

3) MCSO monitors the IA freqs, including the new USA-x 800 MHz frequencies, but I must admit we seldom use them. Chases, officer-needs-assistance, and things like that are usually coordinated by hot-line telephone, dispatcher to dispatcher. There are analog trunk groups on the MCSO system - jails, other agencies (Rabies/Animal Control, Adult Probation, etc). We (dispatchers and deputies alike) can talk directly on those channels as well as a few talkgroups for other agencies on the same TRS -- Surprise PD, Paradise Valley PD, Sun City West Posse, etc.....
Officers in some agencies, like Glendale, Chandler, Avondale, etc., have the ability to come up on the old UHF frequencies and talk to MCSO dispatchers. We still monitor those UHF frequencies (the 460.xxx ones), but I expect them to go away soon. Other departments covet them, I think.

4) Somebody posted that ALL digital groups will be encrypted. I don't think that's true -- the main patrol talkgroups, for example, are digital but not encrypted. Just the special investigations and special operations ones.
But, until we get some digital decoding for scanners, they all might as well be. :-(

5) Coverage: MCSO does the unincorporated parts of the county, plus contract coverage for the following communities:
Fountain Hills, Rio Verde, Carefree, Cave Creek, Guadalupe, Gila Bend, Queen Creek, Sun Lakes, Sun City, Sun City West (the latter two are unincorporated but have very active posse units with their own radio systems who provide non-criminal services and backup for deputies). Fire/Rescue for most of MCSO-covered areas comes from Rural Metro (exceptions: Guadalupe, Sun City,

Sun City West, Sun Lakes are dispatched by Phoenix Fire)

Hope this helps you get oriented ....

Check the Southwest Frequency Directory for a good list of agencies and frequencies.

L. W. "Dan" Danz, TCO
Maricopa County Sheriff's Office (MCSO)

At present, I tend to listen to a lot of Scottsdale PD, since I'm sort of in that area (Fountain Hills). I also have the MCSO freqs, and still pickup a little traffic from the FH MCSO branch. Mostly it is quiet there, which I attribute to their going digital with the rest of the department.

Does anyone know the freqs for the Fountain Hills Marshals? I've scanned for awhile, and not picked them up at all. What about interagency freqs as well (ie, how does MCSO communicate with other departments that *aren't* digital)? I know - the easy answer to the latter is probably "poorly"... :)

Thanks in advance,
<lurk mode on>

This is interesting information, if I may ask your source? I have heard that with the new Fire Administrator for the
Fire Dept that she has voiced interests in having the town fire dept dispatched by Phx. Last I heard there was no
formal decision by the town council on the matter thou? I am not doubting your statement, just wondering where it
all came from. I live in Buckeye so this sort of directly affects me.

Shame on me, Kevin. Don't tell Amber.

But, what's this? BUC PD is not going to dispatch BUC Fire anymore ????
When does that happen? And will they get the 154.980 frequency to go with
it, or are you going to keep it for fireground?

we, (the buckeye valley fire district) are looking around Sept for a start date. we will be dispatched off PHX fire 1, then move to our new repeater fx (output is 154.145 , i forget the rest) the town of buckeye will follow suite later on, not sure of their time line. should be a lot of fun the repeater will be on the tanks, in the county building. PHX will microwave link from the FBI building on the tanks.

see ya later dan

this is regarding the buckeye valley fire district. the town is on their own time line, and i believe it was approved during one of the last two council meetings. the district is full steam ahead on this project. do a FCC web site search for the buckeye valley fire district, and you'll see our new freqs. repeater will be going up soon, and PHX fire is setting up there end of it. Most of this has happened since the split between the town and the district.

Hi Kevin,
Thanks for all the good info. Check that frequency again, though. Tempe FD likely won't be too happy if Buckeye pops up a repeater on White Tanks that has an output the same as Fire Ch7 (Tempe Tactical). :) Perhaps inverted numbers or something?

Re: FHMD as Type II

You could very well be right ... I don't have any official knowledge about whether they went to Type II or not. I thought the TRS was a hybrid.

However, you rattled my faith in my numbers, so I've been listening to FHMD this afternoon (I recognize the voices and the call signs) with my BC895 set for size S0 and I've gotten mainly 63712, 63732, and 63733.

Both of these are a little goofy as a type II

63712 is good -- it's comes out 0 mod 16 -- i.e. no flag bits.
However, it's an EVEN multiple of 16, and people who setup Motorola type II talk groups usually do it as ODD multiples of 16. Ever notice that the first talkgroup on many systems is 48 (3 x 16), you never see 64 (4 x 16), and the usual next talk group is 80 (5 x 16) .

63712 doesn't fit this pattern -- it's 8392 x 16, which makes it a member of the usually skipped even talk groups.
I've heard the reason is there's not enough bits in the OSW, so there's an ambiguity between the odd/even multiples of 16, and therefore Motorola recommends one or the other in a system but not both.

63732 is not 0 mod 16 -- it is 63728 + flag bits 4 == Emergency patch.
Don't think so. It was regular 10-28, 10-29 info type traffic.

63733 is not 0 mod 16 -- it is 63728 + flag bits 5 == Emergency multi-select. Don't think this was happening either.
Okay, the base (63728) is an odd group -- it's 8393 x 16.

I haven't heard the one you gave -- 63840 but subjecting it to the same analysis
63840 is 0 mod 16 - no flag bits, and it's an even group (3990 x 16)

Now, if I look at these as Size Code S3, where there are 3 bits for fleet and 3 bits for sub fleet and 7 bits for unit,
63712, 63732, and 63733 are all units in block 7, fleet 6, sub fleet 1.
63712 is unit 96, 63732 is unit 116 and 63733 is unit 117. This makes a lot more sense ... they were all talking to each other at one time in a conversation.

63840 as size code 3 is block 7, fleet 6, sub-fleet 2, unit 96. -- i.e., the next talk group for this subfleet.

I'm hearing people with the same conversation in the range 63616 to 63743 -- that's the range of block 7 fleet 6 sub fleet 1.

If I'm right, and you decode as S0, you'll hear people with the same conversation on 63744 - 63871 as well as 63840.
Finally, I don't think you'll hear 63840 and 63712 in the same conversation, because I think they are in the same fleet, but a different sub-fleet.

There's one other interesting thing about the numbers you gave: 63712 is 706-1,unit 96 63840 is 706-2, unit 96.
I think it's the same unit on two different talkgroups.

Here's another example that just occurred. Unit D16 came up as 63723, and the dispatcher replied as 63732. Same conversation, so it can't be a type II system. Both of these, though, fit the range for 706-1.
And unit D11 (63709) talking to the same dispatcher (63732). And now unit D9 (63712) and (unit ??) 63727 talking to the same dispatcher, going 10-08. They all fit the range of 706-1.

Scottsdale PD on the same system is definitely type II ... so this has got to be a hybrid system.

I think it's fairly conclusive that Fountain Hills is a type I fleet arrangement, so the only thing left is the size codes, and to really nail that, we'd have to have some more traffic with another dispatcher, or with two cars talking to each other on a different "talkgroup". I don't have that going on right now, but I did have enough traffic at one time in the past year or so to settle on size code S3. It was the only one that made sense. And it makes your 63712/63840 combination work right.
I've got another dispatcher voice and a unit working together on 64492 and 64495. Don't know who they are, but the combination puts them in 706-7. They sound like city government or public works, but there wasn't enough meat in the conversation to nail it. However, when you get the public works guys talking to each other in one sub fleet and the cops in another, it's a good indicator the size code is right.

Ah, just caught two marshals talking to each other on channel "2" ... 63855, which is in the 706-2 range of 63744-63871. It all fits.

Please tell me if you disagree ..... or if you have some "inside knowledge" ...

Forty years ago, I used to intercept Soviet communications and try to figure out what was happening on their frequencies. Sometimes, the skills I learned then come in handy when trying to figure out what's going on in the public safety bands. :-)

498. Re: [ArizonaScanner] MCSO, etc. / F.H. Marshal

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-15 01:39:11 UTC
From: Mike ICP803
Topic: 486 Message: 498

Another fleet map setting for the FHMD that seems to be logical is block 7 - Size Code 8

Reasons being: I have not heard any activity on further than 2 talkgroups for the Ftn Hills Marshals Dept. I have only heard "Dispatch" and "Tac-2" for their channels. I believe in addition to those, there is 3 additional talkgroups and those are used by F.H. Government dept's.. (Streets / Govt / Parks & Rec)

With size code 8 here is what the talkgroups appear as:

712-1 = F.H. Marshals [Dispatch]
712-2 = F.H. Marshals [Tac-2]
713-1 = F.H. Streets
713-2 = F.H. Government
713-3 = F.H. Parks & Recreation

The separation and talkgroup organization above appears somewhat logical. Maybe with some other ears on those talkgroups they will verify as being the right ones. The reason I tried a different size code was the 706-1, 706-2, 706-3, 706-5, 706-6 format on S3.. I had never heard any traffic on 706-4 leading me to believe another size code would make it fit right. I guess that makes me a talkgroup perfectionist. ;-)

I took a look at the FCC database and found the frequency Kevin may have been referring to. Under the Buckeye Valley
Rural Fire District I found 154.415 along with a couple of other freq's which may be repeater output and a bunch of
UHF freq's (not sure what thats all about). I will be monitoring the VHF freq's for any activity.

Actually, the first group would be 0x001 (hex) which is 16. But that's just
nitpicking :)
(to match your 0x003=48 and 0x005=80)

> I've heard the reason is there's not enough bits in the OSW, so there's an
> ambiguity between the odd/even multiples of 16, and therefore Motorola

Actually, it depends on whether or not the system is setup for "Scan Mark".
The
high-speed (low-speed handshake data on actual voice frequencies while in
use)
"priority scan" mode of the TRS only sends out 24 bits (of 32 possible), so
it is
recommended that you use either all ODD or all EVEN (or else someone on
0x003
will hear information for talkgroup 0x002 if they are scanning).

> Scottsdale PD on the same system is definitely type II ... so this has got
> to be a hybrid system.

Probably more appropriately (it's been over a year since I've listened to
this particular TRS) a type IIi, which is different from a hybrid.

If anyone is interested, here is my standard spiel about a lot of these
topics..

On "modern" Motorola Trunk systems, there are 8 partitions, 000-1ff,
200-3ff, 400-5ff, 600-7ff, 800-9ff, a00-bff, c00-dff, and e00-fff. (Convert
these from hexadecimal to decimal for the TrunkTracker equivalents -- and
for individual radio ID's add another digit on the right side.)

Within each of these "partitions", you can set several options: type I
signalling, type II signalling, analog clearvoice modulation, analog
encrypted modulation, digital modulation, and a couple of others. If you
are listening to talkgroup 005, for example, and you hear something that
sounds like "digital" on talkgroup 1e5, you are not hearing digital
communications, simply analog encryption.

Hybrid systems don't quite fit this profile (they literally ARE a mix of
type II and type I with a bunch of kludges, and they are actually quite

rare.)

> L. W. "Dan" Danz, TCO

Just curious, what is a TCO? (Corrections officer?)

503. FM DX/VHF Low Band Skip

> ambiguity between the odd/even multiples of 16, and therefore Motorola
> recommends one or the other in a system but not both.

Actually, it depends on whether or not the system is setup for "Scan Mark".
The
high-speed (low-speed handshake data on actual voice frequencies while in
use)
"priority scan" mode of the TRS only sends out 24 bits (of 32 possible), so
it is
recommended that you use either all ODD or all EVEN (or else someone on
0x003
will hear information for talkgroup 0x002 if they are scanning).

> Scottsdale PD on the same system is definitely type II ... so this has got
> to be a hybrid system.

Probably more appropriately (it's been over a year since I've listened to this particular TRS) a type IIi, which is different from a hybrid.

If anyone is interested, here is my standard spiel about a lot of these topics..

On "modern" Motorola Trunk systems, there are 8 partitions, 000-1ff, 200-3ff, 400-5ff, 600-7ff, 800-9ff, a00-bff, c00-dff, and e00-fff. (Convert these from hexadecimal to decimal for the TrunkTracker equivalents -- and for individual radio ID's add another digit on the right side.)

Within each of these "partitions", you can set several options: type I signalling, type II signalling, analog clearvoice modulation, analog encrypted modulation, digital modulation, and a couple of others. If you are listening to talkgroup 005, for example, and you hear something that sounds like "digital" on talkgroup 1e5, you are not hearing digital communications, simply analog encryption.

Hybrid systems don't quite fit this profile (they literally ARE a mix of type II and type I with a bunch of kludges, and they are actually quite rare.)

> L. W. "Dan" Danz, TCO

Just curious, what is a TCO? (Corrections officer?)

I figured that he was talking about the Astro portable, but he said SCANNER. Geez, I guess I need to stop taking words so literally. And yes, an Astro Saber 3 will hit you for about $3500 easily. And then you have to have the system key to program it, and then the RSS software and RIB -- another $300-$500.

Jim

Topic: 503 Message: 510

Thank You for changing the subject!

I was beginning to think that I was the only person on this
scanner list that WAS NOT interested in the MCSO and digital
radio diatribe!

To be honest, I have not yet during this solar cycle taken time
to hunt low band DX. I think I will fire up the scanner and hook it up to my
Antron A-99 and go hunting.
My ultimate catch, Burger DX, via 35.02mHz !

Help - !

I keep getting 2 copies of the ArizonaScanner mailing list. This has started after Digest # 119 on 6/12...I haven't changed anything...have you?

I unsubscribed and waited a couple of days to resub, but I still get 2 copies. Can anyone help???

Does this have anytjhing to do from the change from onelist to egroups?

john

Hi John,
if you have Outlook and are using filters to sort your mail, it is sure easy
to accidentally make TWO rules to drop the AZ Scan emails into one folder,
thus creating two copies.
I do this all of the time.
Hope this is of help to you.

Hi Donnie,
It is one side of Marine Channel 88.... which is a public use channel for those on the water.
I have heard that truckers and others traveling the interstates do use marine HTs for occasionally for 'private" non CB traffic.

BTW, a great search BOT is here: http://www.metacrawler.com/

Do be sure and search as a PHRASE when doing frequencies.

If you want to carry it a step further, give Copernic a shot: http://www.copernic.com/

This is a downloadable search BOT program that uses as many search engines as you'll ever want. The demo is free.
I did spend a few $$ and bought their Copernic 2000 and have had great results (including translating).

Cheerios,

I'm a trucker and I have never heard of any one of us using a marine freq for talking. The so-called "freeband" which is above 27.405MHz sure, but nothing higher up. I don't think it would cross the typical driver's mind to buy a radio that far removed from the CB freqs. Most drivers buy what's in the truckstops, and these are limited to export radios(Galaxys etc) regualr CBs and more recently FRS radios. Just had to put in my two cents worth on that point.

Once upon a time, when working in Western Maricopa County, my fire dept did
a standby for a drug bust. The house was actually known to have police
radios (stolen, and not scanners)
The law enforcement agency passed out radios that actually had marine
frequencies in them.
To hear the operation on the radio, I would have never guessed what it was.

Hey bob, can you pick me up a burrito, was the sign for make entry.
I guess one never knows what they might hear on a given frequency much less
know what it really means

Dave,
it is one side of channel 88.
Do a search for it. If it isn't a public channel, my error.
It is an unusual split channel, using two freqs.
If you search it using the search bots I suggested, you'll find it mentioned
more than once.
hope this helps you get the exact information you seem to need.

524. Re:162.025

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-23 13:08:55 UTC
From: John Guetherman
Topic: 522 Message: 524

Dave,as you may know,there are two variations in the VHF Marine band. There is the U.S. channelization,and the International channelization. In the States,162.025 isn't a valid frequency. Ch. 88 is simplex only,on 157.425. The highest frequency in the U.S. is 162.000,which is paired with 157.400 on Ch. 28,one of the ship-to-shore radio channels.
Internationally,however,Ch. 88 may be a semi-duplex channel. I don't have an international list in front of me to confirm that. The USCG may have permission to use it,as long as it doesn't cause interference to whatever other use it is intended for. Does this help any?

I have also heard of truckers using marine band radios to get away from CB,for privacy. This may have been limited to particular companies,or something. I had read it several years ago in Popular Communications magazine,I believe.

Anybody had a chance to test out the updated Pro92 firmware version? Was wondering if it handled the Motorola trunked systems any better than the previous version?

Thanks for your response everybody. I knew that it was not used in the US and I know the Coastguard in San Diego use's it but not any truckers I didn't know truckers did stuff like that? I will monitor the maratime band more offten to see if I can hear something other than Mesa police tactical and wireless mic's listed in SWFD

Not to worry folks - I am sure the moderator will take care of this yutz!
Maybe in the group description he should also add no geeks allowed
Egroups offers the list owner a great feature - Its called "ban a member"
I hope Dan finds his way through this feature.
There is no call for a response such as the one given, as to why he posted
this worthless bit of information.

Have a wonderful day all!

Mike

I don't comprehend how or why it is such a big mountain to climb for people to keep the topics here on scanning only. We were doing so well for so long, and then the last few weeks things popped up. No, Tali, this information did NOT need to be posted this widely. Phoenix and Arizona have Ozone Alerts all the time, and we don't need to see them all here. I can't ask enough... KEEP it on topic folks, for all of us.

To hear Intermtn tell it - Nextel won the bid at the FCC auction several months ago, and just now decided to take possession of the freqs. Our system (Medi-Cab) has been billed by Nextel starting July and their stated claim is to move us to digital by December. So much for my PRO-92 investment ;)

BTW There are some non-standard control channels here in PCT that according to Percon are licensed to Nextel. A painting contractor friend of mine has been using Nextel digital in Prescott Valley for the last year or do, having moved up from PHX with the same phone equip.

Also noted that Paragon Cable has gone trunked - the office next door dispatches for them after hours and the have installed a LTR base there. Still haven't been able to find the freqs or here them on any of the active trunked rptrs.

I agree, it was not needed in response. None the less, I can understand the frustration some may feel, signing up for a list called "ArizonaScanner" only to get descriptions of what particles might or might not be in the local air on a given day, in the email. Let's everyone move on and work to keep things on topic and enjoy the hobby-related chat. Hopefully that can be the end of this event.

That in mind, anyone heard MCSO on UHF at all anymore? They went slowly the last few weeks, seemed like less and less on UHF each day. I believe the East side is working better than the West side on the 800 digital. Anyone out West still hearing anything on 460.050?

Dan

From: Robert Benne
Topic: 176 Message: 542

Some interesting things about 800:

Many dead areas still exist, especially in District 4 (Cave Creek/Carefree and North), North and other areas.

No Cross talking or contact with other agencies. You can have a 962 on the next block and unless dispatch tells you, you'll never know as you can no longer monitor other agencies. Car-to-Car impossible without dispatch help. Also everything is now monitored, i. e., no more simplex. The ability to have others respond to your traffic because everyone is listening (on and off duty, posse and reserves) is not essentially gone unless you are issued an office handheld and have it on all the time.

Lakes is very difficult. You can get "out" with more clearity when you are in an area that you can get out, but when you have an emergency and need to coordinate quickly with others it's easier on the old VHF frequencies. That's why you are still hearing so much traffic on Lakes simplex (159.09).

Lakes was not to be converted to 800 mhz, but installers refused to move the dispatch cabinet to the new comm center so 30 days before the switchover they were advised they, too, would change over. Lakes personnel very unhappy about the change. Lots of problems with 800.

The radios may be "state-of-the-art" but really do not meet the needs in the field, which is why there is so much unhappiness with it. many of the problems will NOT be able to be fixed so you are faced with a lot of tradeoffs - more clarity but less real "usability" in the field due to the limitations of trucking and digital.

For $34 million there is, in my personal opinion, no chance of going back, but many, many problems exist and they will NEVER be worked out - will just have to get used to a very costly system and learn to live with it, but I fear someone is going to get hurt as a result of it.

DPS was VERY smart in grabbing the old frequencies and system. They are going to have a first class, well tested UHF system. Any idea how they are going to use it? Will they replace the old VHF system or augment the current one?

Just my 2 cents.....

543. antennas

can anyone tell me if a police car, using vhf high, has 4 antennas in a square on its trunk in addition to its normal vhf antenna. Are these for tracking for example bank robbers with a tracking device in the money bag or what? I have seen several tucson pd cars with these and when there is a bank robbery they call out certain cars. I cannot remember their callsigns. Also do the homedepot employees carry cell phones or are they radios?

Topic: 543 Message: 544

A lot of time these are on the roof of the cars, too.

I think they work with the Low-Jack (sp?) (system for stolen cars), and the 'tags' they drop in the money during a bank robbery.
I don't remember what call signs they use when they are in tracking mode.
Also, the have hand held devices the can use when they get out of there cars, that do the same tracking function.
I don't remember the freq. for the 'tags', but it is in the 173mhz range.
They also, have base towers up in town, because dispatch can get a 'hit', and then send cars to that area.

Home depot is using Nextel systems. So, they act as both a phone and radio, but my guess is they are using them in radio mode only. (as least for outgoing calls)

The vehicles that have 4 antenna's in a square patern are for the Low Jack car theft system. The cars with 3 antennas in a triangle are for tracking bank robbery tracking devices. Hope that helps
Mike Lindsey

Subject: [ArizonaScanner] antennas

can anyone tell me if a police car, using vhf high, has 4 antennas in a square on its trunk in addition to its normal vhf antenna. Are these for tracking for example bank robbers with a tracking device in the money bag or what? I have seen several tucson pd cars with these and when there is a bank robbery they call out certain cars. I cannot remember their callsigns. Also do the homedepot employees carry cell phones or are they radios?

The vehicles that have 4 antenna's in a square patern are for the Low Jack car theft system. The cars with 3 antennas in a triangle are for tracking bank robbery tracking devices. Hope that helps

What VHF system??????

Been gone a long time!.

We are looking at doing split (12.5 kHz) channels on those frequencies.

The only problem is that those channels are NOT usable statewide, only
in Maricopa county.

4 antennas in a square pattern are for LoJack, stolen car
tracking.(170.???)
3 antennas in a triangle are the money bag trackers.

Topic: 552 Message: 552

BD18Packer, I have no interest in knowing the assets @ Area 11, I Springs, Tonapah or Groom Lake. I am only interested in fire apparatus {structural protection & Crash-Rescue} located at Nellis Air Force Base in Las Vagas. I have scanned the site you referenced {www.nellis.af.mil} all of 8 pages on AR, w/negative results. If you do have any info and wish to share, please do. If not I will understand.

Thanking You in advance
Danny mcLean

Lo-Jack for stolen cars 170.075 and Pro-Net for money bags I think there are several frequencies in the 220mhz band for Pro Net a "211T" is the usual call put out for these types of tracking activity. It's my understanding that the Pro-Net system has many receivers placed throughout the coverage area, hits or activations are tracked with an on srceen map of the city at the dispatch location and based on signal strength and other factors law enforcement is able to track the movement of with help from the dispatcher and the receivers in the unit's. I listened to San Diego Police train using Pro-Net in the early 90'es and once or twice on an actual activation it's really interesting to hear how they use this system to catch the bad guys.

When TPD first started using the system they did a lot of practice runs with it. It was very interesting to here how they "worked" the area using I assume computerized maps. I happened to overhear one such test about a year ago. They mentioned several sites of which were used to track they money bag.

>As a fairly new member I am wondering why the member list is not
>available for us to use and also why are there some members that use
>their e-mail name and some that use their real name?

I have not made the member list available to respect the privacy of some of the more "official" members of this list. As many of you know, there are some EXTREMELY helpful people on this list... Walter from DPS for example, has been a great resource for all of us (in my opinion). When I started the list, I set it the way I did so that official sources would be more likely to willingly sign-up, and could decide later if they wanted to post and tell others who they are and where they work (remember, many can be figured out by their email address).

I think we all benefit from having some level of privacy on this list for those potential information-sources who need it, and allowing each to make his own decision about revealing their email address later, once they decided to post an answer to a question, for example.

I also have not wanted to have to lay out specific rules about what names people do or don't use. Assuming we can all respect each other and be decent, additional rules shouldn't be needed.

From: Carl Maness
Topic: 557 Message: 557

I've heard several instances of DPS units giving out GPS lat/lon coordinates of incidents (especially when medical helicopters are involved) and I'm curious, are they just using commercially available handhelds or is it some sort of in-vehicle system? Any plans to integrate with MDT's ? Maybe vehicle tracking using the newly acquired frequencies?

Just curious. Thanks in advance,

Carl N7UZP

I am not familiar with the department issuing any GPS to officers.

Was this the officer or the dispatcher?

> and I'm curious, are they just using commercially available

559. Pronet & Lo Jack

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-28 23:31:31 UTC
From: Dfiber8@aol.com
Topic: 559 Message: 559

In Tucson,

Lo Jack is 173.025,

Pronet is 219.600 AM mode.

I don't think there is a distinction here on a misdemeanor and a felony for bank robbery (could be wrong).

The radio code (Tucson PD) for a bank robbery is "Code 43". This involves the activation of a Pronet "Tag".

Hope this helped some.

Fred S.

Heard at least two occasions in the past few months, both on District 6 , both accidents requiring helicopters. The officer was reporting his on-scene lat/lon to the dispatcher who I assume relayed them to the helo pilots. Maybe it's just one officer who, like me, carries his GPS with him at all times!

Carl

I've been hearing some simulcasted stuff on 460.375. I'm not sure
who it is exactly,though. I've only heard the dispatch side of it.

I've also heard some law enforcement-type traffic on talk group
496,on the White Tanks-Thompson Peak system. Any ideas,anybody?

Pronet has no standard frequency they vary from city to city and bank to bank they are all in am mode and in the 220mhz band. Pronet is also used to track probation violators. The frequencies given were one's I have monitored with little luck but at times during testing I could here a pulsing signal fade in and out.
As far as Lo Jack I didn't know there was another frequency I thought 170.075 was a standard nationwide frequency this one I have monitored.

"211T" is the usual call put out for these types of tracking activity.
It's my understanding that the Pro-Net system has many receivers
placed throughout the coverage area, hits or activations are tracked
with an on srceen map of the city at the dispatch location and based
on signal strength and other factors law enforcement is able to track
> the movement of with help from the dispatcher and the receivers in
> the unit's. I listened to San Diego Police train using Pro-Net in
the early 90'es and once or twice on an actual activation it's really
> interesting to hear how they use this system to catch the bad guys.

I heard the Peoria police training with money bag trackers,and have
heard some assists given to Glendale,when the Tags were being tracked
by Glendale near the border line of the two cities. At one
point,Peoria was using a "Tom" suffix,(example: 132T),to indicate
those units that had them,but I don't believe they're using that
suffix anymore. Occasionally have also heard Phoenix police
dispatchers kick out a hit on them,and the resulting attempt by
officers to find it.

****
I too have heard a strange signal at 219.600, although I havent
listened to it for sometime now, it sounded like a beacon, but it wasnt
tx'ing any kind of CW, it was more like a data transmition.
And as for 173.025,... well that wont work down here in the
Sierra Vista area.... thats the output of the MP's main repeater from Ft
Huachuca.... and them folks is blabber-mouth's!!!!

567. LoJack on 173.075

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-29 15:11:30 UTC
From: John Schmich
Topic: 567 Message: 567

This morning doing some research about LoJack, I found the following: Note the frequency.

http://www.fcc.gov/Bureaus/Wireless/Orders/1996/fcc96492.txt

dated 12/30/96
(paragraph): 109. Stolen Vehicle Recovery.
LoJack Corporation requests clarification that the type acceptance requirements of Section 90.203 of our rules do not apply to equipment operating on 173.075 MHz.
This frequency is used in the Police Radio Service for Stolen Vehicle Recovery on a shared basis with the Federal Government. The type acceptance requirements of Section 90.203 of our rules apply in the absence of frequency specific technical requirements. Therefore, the relevant technical specifications for equipment used in stolen vehicle recovery systems on 173.075 MHz are listed in Section 90.19(f)(7) of our rules. We are amending Section 90.203(j) of our rules to clarify this point.

Also found in FCC Document da000402.doc dated 2/29/00:

"LoJack requests a waiver to permit it to utilize a duty cycle of 1800 milliseconds every 300 seconds, with a maximum of six messages in any 30-minute period."

I take this to mean a signal lasting 1.8 seconds once every 5 minutes. Not much to listen to.

John Schmich

569. More about LoJack on 173.075

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-29 15:51:23 UTC
From: John Schmich
Topic: 569 Message: 569

Also found this, dated 10/1/98

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=90&SECTION=20&YEAR=1998&TYPE=TEXT

(page 282)(near bottom of long document)

(6) The frequency 173.075 MHz is available for stolen vehicle recovery systems on a shared basis with the Federal Government. Stolen vehicle recovery systems are limited to recovering stolen vehicles and are not authorized for general purpose vehicle tracking or monitoring. Mobile transmitters operating on this frequency are limited to 2.5 watts power output and base transmitters are limited 300 watts ERP. F1D and F2D emissions may be used within a maximum authorized 20 kHz bandwidth. Transmissions from mobiles shall be limited to 200 milliseconds every 10 seconds, except that when a vehicle is being tracked actively, transmissions may be increased to 200 milliseconds every second. Transmissions from base stations will be limited to a total time of 1 second every minute. Applications for base stations operating on this frequency shall require coordination with the Federal Government. Applicants shall perform an analysis for each base station located within 169 km (105 miles) of a TV channel 7 transmitter of potential interference to TV channel 7 viewers. Such stations will be authorized if the applicant has limited the interference contour to fewer than 100 residences or if the applicant:
(i) Shows that the proposed site is the only suitable location;
(ii) Develops a plan to control any interference caused to TV reception from the operations;

Scott- Yes you've got the right idea on the quad antenna set-up. It used to be three in a triangle, then they
upgraded. You probably heard them requesting all units from all over town.. I think they say "BTF units" (not
Burglary Task Force acro that I was used to.) Air -1 has the set-up, too and with the altitude, they are extremely
accurate in pinpointing as compared to the ground units. When there's a live 'tag' out there the scanning is is
intense... especially when the robbery has not yet been reported.
I'm happy to see more Tucson listeners involved in this list!

Recently, and on several other occasions, I was in the Nogales border area (our side) and I overheard what sounded like customs doin ops on 154.325, which is the Green Valley Rural Metro f.d. freq. At first I thought it was"scanner error" but I confirmed it on 3 different scanners. It was low powered as it did not last much out of the Nogales city area. Anyone else have this encounter?

572. Trains and DTMF signaling

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-30 20:12:12 UTC
From: David Bohmke Jr.
Topic: 572 Message: 572

I have been monitoring the local rail roads here for sometime now and found that DTMF tones are sent to activate the PBX box on White Tanks what I don't know is why they send them on 161.550 the road channel I monitor here in Mesa? Sometimes I sit near the tracks and wait for a train to go by monitoring this frequency and hear DTMF but no voice? I was wondering if that is some kind of code to lower the crossing gates or activated some other kind of remote radio link?
Can anyone help?
Dave, KD7JGX
Mesa

573. My favorite rail road frequencies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-07-30 20:24:12 UTC
From: David Bohmke Jr.
Topic: 573 Message: 573

Here are the most active and the most fun to monitor. I live near the cannal that separates Mesa and Tempe, the tracks go right behind my appartment complex so the reception is really good even the Phoenix yard tower. I have monitored some others but these are the only one's I can hear with any activity worth monitoring.
161.100=Phoenix tower
161.040=TX PBX
160.890=RX PBX
161.550=Road
160.650=Santa Fe Road along the right of way near Wickenberg going into PHX yard I haven't really herd to much on this one but it does work when they are in town.
Anybody want to add some frequencies?

460.375 is the UHF law enforcement interagency frequency. You can hear the whole range of weird stuff on that. I suppose anytime some-hundred or so dispatch centers have a given frequency, who knows when they'll simulcast what on it, by accident or otherwise. A good one to keep an ear on!

TG 496 on all tower sites is the County parks departments "EAST" talkgroup. They run plates, people, etc. so it sounds like regular law enforcement patrol work.

I am working on a smaller, newer Phoenix "supplement" book to the Southwest Frequency Directory 6th Edition that will include (among other things) a fairly complete list of how talkgroups on the county trunked system are used, including digital and analog talkgroups. This little book will not include areas outside the Phoenix metro area or the additional info like radio codes, unit designators, etc., to keep it compact, but will list all public safety frequencies and talkgroups I have recorded at this point, as well as SOME of the other services (like aircraft, etc.). It will be similar to the "metro guides" I used to do for Phoenix in past editions. Quite a bit of new frequency and talkgroup info has been received since April when SWFD-6 was published (radio systems change quickly), and I'd like to get a nice smaller reference out with that info. I've also had LOTS of requests from people who already do own SWFD-6, for a smaller version to go in the car, back pocket, etc., so I'd like to accommodate that as well.

As mentioned, most will still need the BIG (400 page) SWFD-6 book for radio codes, maps, fire station resources, and other extra info. This new book will be a supplement "add on" only and won't really replace the need for SWFD-6 for scanner listeners who like to keep a reference on all the good info they can. Expect the mini book in September or October.

If anyone has any questions or suggestions on Scannerstuff products, including the Southwest Frequency Directory books, please feel free to email me at danrollman@.... Also, if you own a copy of 6th Edition of SWFD and have any corrections or additions, we'd love to hear from you. Please send them to updates@... if you haven't already. Please make sure to tell us in that email if I can give you credit

by name (if I used your info) in future SWFD publications.

Scott,

All of the Home Depot personnel I have seen in the Tucson store on Oracle carry either cordless or cell phones, or both.... go figure.

Also, I spent most of yesterday morning over coffee reading the posts re: PCSO frequencies, the new system etc. I programmed in the new freqs on my 245XLT in a separate bank, and left the old EDACS system in another bank. I'm hearing SO traffic on both. Are they still using the old freqs as well as the new? And, does anyone know if there is a means by which to monitor the new multinet systems, i.e., like buying another radio? Thanks!

Kent Lacy

It was my understanding that there were NO new freq's, just a different
trunking format and radios.

And, does anyone know if there is a means by which to
> monitor
> the new multinet systems, i.e., like buying another radio? Thanks!

Yeah, a Transcrypt/EFJ (makers of MultiNet). No third party scanners
that I know of. Also, Motorola is now licensed to make and sell LTR
radios. Maybe MultiNet too?????

Actually, there were several new frequencies on every tower site. Remember, the EFJ and EDACS systems were up together for a time. When EDACS came down, the (old) frequencies were added to the (new) EFJ system to add more frequencies.

590. Emergency E-mail Network

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-08-01 22:03:35 UTC
From: BD18PACKER@aol.com
Topic: 590 Message: 590

Anyone who is interested in receiving E- mails about Severe weather, public utility outages, weather forecasts, hurricanes, tornados, evacuations, natural disasters, health emergencies, and other emergency info might want to try Emergency E-mail Network. I saw this on a local news channel, about warning those who don't have a scanner, ham radio, or weather band radio nearby. This free web site will send you e-mails on your computer,cell phone or digital pager,and is available in most(if not all) counties in AZ. Haven't tried this yet, but the site looks interesting. Anyone who is aware of this, or has tried it, I would appreciate a review. Web site address is http:/emergencyemailnetwork.com

73's to all

Bob D.

This is not an endorsement, or a commercial solictation...just a heads up for those that might be interested(ie: Skywarn,hams,etc.)

591. Help With SRP 900mhz Trunking

Yahoo group: ArizonaScanner (1999 — 2002)

Thanks for all the help.I am male and I am in my, well...oh...duh 20's.
Are you a "ham"?

Oh back to this scanning thing! Here is the prob.I have a Pro-92 and a Pro-92"A".
The "A' is new.Just came out to Tucson Radio Shacks.I can hear T.E.P just fine on
the non"A" but will not scan on the new one.Not just this one but 3 of the"A's" did
not work on this system.I can scan Marana on a G.E system with out a prob.Also
I can hear T.E.P in the F.M mode of the "A" with out a antenna so it is not a sig
prob.Thr diff of the A's and non A's is that the old Pro-92's use subaudible tone's
to trunk.The new 92's use the control freq.Do you have the call groups?

Oh well I will keep trying...

73's Kelly N7YGX

Date: 2000-08-04 07:03:52 UTC
From: David Bohmke Jr.
Topic: 579 Message: 593

Ok lets see here is this a GE system or Motorola?
If it a Mot system try E-2 setting and go from there if you see the talkgroups jumping around while on the same conversation then it may be a type I system try setting the blocks to s-4 and see how that works.
Now if your are monitoring a GE system you need to have the freq's programed in the LCN order to properly track that system I am still not sure about what this does really but if you don't have them in order just right it can make a big differance in the way the scanner tracks the movement of the conversation as it jumps around the channels in the system?
This thing about different versions of the Pro-92 A or non A I am in tune with that part but there is a group like this one that deals with just those scanners ,those guys might be able to help you too? I don't have the URL handy I'm not an owner of that brand but if you put Pro-92 in your search you may find some more info on that scanner?
Hope this helps

Hi Kelly,
Unless you have already found it, try this site out for help.
www.pro-92.com/disc4_frm.htm
I am unfamiliar with T.E.P. I've had the 92A for a week now and find it to be improved over the first unit. But, I only experienced the 'audio pulsing' bug associated with monitoring a Motorolla Type I system in the 'closed mode.' There are some other things I think they could have improved on, but, ...
Am awaiting a look-see on the 780XLT. Hope you find the answers you are looking for.

Hello Dave,

No, I have never monitored either of those systems. Perhaps you
could send me info on them, ...frequencies, etc. At the Pro-92
discussion board site, postings seem to have dwindled as of late and
I'd guess this is because everyone is having a nice time with their
92a's, . . . I know I am happier, but, like I said, I listen almost
exclusively to Glendale P.D., a little bit of Phx, 146.940, . . .
so, if given a set of freqs I'd be happy to try and test them out for
you David.

Life Net has moved to a convention UHF repeater 463.2000 pl 127.3 on White Tanks.
Do you show all these frequencies in your data base as being a complete system? If so where did you get the list? some of these frequencies are listed with the FCC as belonging to other companies in convention mode so it took me some time to figure out all these freq's are part of this TRS.

Life Net has moved to a convention UHF repeater 463.2000 pl 127.3 on White Tanks.
Do you show all these frequencies in your data base as being a complete system? If so where did you get the list? some of these frequencies are listed with the FCC as belonging to other companies in convention mode so it took me some time to figure out all these freq's are part of this TRS.

Mesa City Council approves contract for new state-of-the-art radio system
800 Megahertz Trunked Radio System to change how Valley cities communicate with each other

Mesa took a major step into the 21st century Monday when the City Council approved a $15 million contract with Motorola to replace the City's aging radio system with a state-of-the-art communication network that will benefit citizens valleywide.

The City Council's unanimous approval highlights the partnership between Mesa, the City of Phoenix and the telecommunication industry, which joined together five years ago to improve how police, fire and city workers communicated with each other.

"This is a significant project for the City of Mesa and all cities in the Valley because it will allow something our police and firefighters have not been able to do before, and that's the ability
to communicate across city lines," said Mayor Wayne Brown. "Approving this contract is a precedent setting decision for Mesa."

The contract calls for Mesa's portion of a new 800 megahertz, digital
trunked radio system, which will provide radio communications for Mesa police, fire fighters and city workers, as well as fire fighters in Gilbert and Apache Junction.

Currently, Mesa and Phoenix use a variety of radio systems with 20-year-old technology. The 800 megahertz digital system will be designed using standards set by the public safety community and the telecommunications industry. The new system will use "open" technology - meaning manufacturers will be able to build systems that will be compatible with one another. The City of Mesa has been a leader in developing these standards.

Citizens will benefit with improved public safety because police and fire personnel will be able to go anywhere in the Valley and talk to their own dispatch center, to another city's dispatch center, inside
buildings or to each other in the field.

Mesa is the only city in the country to play a leadership role in setting the new industry standards. In 1990, the City of Mesa joined the Association of Public Safety Communications Officials and some federal agencies to develop new communication standards, known as Project 25. The project is unique in that it was driven by users

rather than the telecommunications industry.

"Project 25, is a wonderful example of communities working together with the telecommunications industry to meet communication needs and save taxpayer dollars at the same time," said Don Pfohl, Mesa's Communication Director who participated in developing the new industry standards. "Before, these systems were designed so they wouldn't talk to each other. That eliminated competition so costs were higher. With an open communication system, manufacturers will be able to design their products so they are compatible with one another. That's a real plus for the cities."

622. APCO project 25 on Tempe's wedsite with Frequencies+

Topic: 623 Message: 623

The APCO website is hosted by the city of Tempe however APCO is a stand alone non-profit organization. This is not Tempe's APCO web site it is the whole state of Arizona chapter's web site just hosted by Tempe. Tempe's fire department which is dispatched by Phoenix will convert over to the Phoenix Project 25 system when it comes on line. As far as the rest of the city of Tempe we have made no decisions to convert over to Project 25 at this time. If you have any questions regarding APCO, Project 25, or the City of Tempe and its communications systems let me know I would be more than happy to help.

I just dusted my scanner off, and now realize I do not know where my old book is frequencies is, nor do I know any frequencies to program in for the Young area.
Young is between the rim & Roosevelt Lake in Gila County. We have 2 sheriffs in town, a fire dept & a medical helicopter pad...

Does anyone have frequency codes for me? Thanks.

Scott, I'm not positive about DPS, . . but here in Glendale
when you hear KING 91, etc, it denotes the K-9 units,
and KING is a recognized law enforcement phonetic for
the letter K, ...just a possibility,

Dave

Does anyone know if the Southwest Frequency Directory is available by mail, from the publisher, or a vendor? I am unable to get to a store in AZ, or the southwest, to get one. If anyone has info, I would appreciate a post. Thanks.

Also, a question...is the SWFD the product of the folks who used to publish the Arizona Grequency Directory, or is it another company all together? Just wonderin'...

73's to all here.

From: Dan Rollman
Topic: 628 Message: 631

Bob,
SWFD is made by my company, Scannerstuff, and is not affiliated with the company that made Arizona Frequency Directory some years ago. SWFD is in its 6th edition, and started in 1993. The current 6th Edition was released in May of this year.

Online ordering direct from the publisher is coming, but is not available yet. For now, you can order SWFD right online or by phone from Ham Radio Outlet. Try this: http://scannerstuff.com/swfdstores1.html
From that web page, click the link right at the top that says "HRO's Scannerstuff products order page". That will take you to HRO's website, and will allow you to add any Scannerstuff product, including SWFD-6, to your shopping cart and order online. The item you most likely want is the 4th one down in the list... called "SWFD 6th ED".

If you need any other help, feel free to email me directly at danrollman@....

Regards,
Dan Rollman

KINGxxx is the designation for K-9 units.
Formerly they were TACxxx.

KING-AIRxx is the department's fixed wing aircraft.

If people are interested, I can scan and post the Highway Patrol
radio network map. (Definitely not confidential material)

Walter,
I'm sure most would love to see a scan of that. The list doesn't allow attachments, so people who don't want something don't have to take it, but you can certainly upload it to our lists files area at onelist.com and everyone can run over there and download the file. :)

Thanks!

Dan

Hello Denise:

Here's some starter frequencies to help you out. I would strongly urge you to buy the SW Frequency Directory that Dan Rollman publishes (danrollman@...) as it is absolutely the bible and will help even in Pleasant Valley. Next to a good scanner the best thing you can own!

PVFD: 156.425
Gila Cty SO: 155.31 (They can use more than one freq - this is the primary one)
USFS: 168.725
USFS 164.825
Maricopa Cty Search & Lakes: 159.09
Dept Pub Safety: 460.475 (87 and 260)
Dept Pub Safety 460.025 (Rim)
Dept Pub Safety 463.10 (Ranger Helicopters)

I do not have Native American Air which is the air ambulance that services PV. They are, I believe, out of Globe.

Dan's book will have the freqs for Christopher Creek FD and others if you are interested. I'll tell you that being in the valley, reception is limited. Would be interested in any you might turn up.

R. Benne - Potato Butte (Baker) Ranch, PV

Despite what others might say, I enjoyed deciphering what your first msg. said, but you better stick with the "satus quo" from now on Danny!!... You mentioned 170.025.... well down here in my neck of the woods (Cochise County), that freq is used by the Coronado Nat'l Forest folks.... they call it 'tac-2', and as you might imagine, it is a simplex channel..... do you suppose that it's possible, that a group of forest svce folks were taking out a group ,or 2, of Boy/Girl Scouts for an evening of star gazing and/or celestial navigation???.... Stranger things have been known to happen!

I don't know about the Nora units,Narcotics perhaps? Zebra units in the Phoenix area I believe are usually GITEM officers. (Gang Intelligence Team Enforcement Mission: the Anti-Gang unit). Zebra is also used by several Valley agencies for their Tactical/SWAT teams. King is for the K-9 units only.

The Phoenix area DPS patrol units are now using William,Charlie and Edward in their unit callsigns to identify Metro West,Metro Central and Metro East units. 2-William-34,for example. (I *still* think they should have stayed with 1400,500,and 1300 designators.) I haven't figured out the start and end times for each of the 4 shifts. There is *a lot* of overlap.

Wasn't that what Interagency Mutual-Aid channels are for? 154.280 for the fire departments,and 155.475,460.375,866.0125,866.5125,867.0125, 867.5125,and 868.0125 for the police. 155.475 and 460.375 are already linked. (Not that they're used.....) What would it take to link in the 800 MHz channels? *sigh*

Using the excuse that the public would benefit isn't completely true. The public would benefit if the agencies would just utilize what is already avaiable to them. The "type" of system,the technology it's based on,they use may be however many decades old,but I know that the actual equipment isn't anywhere near that old. Waste of taxpayers money in my opinion.

654. Re: Mesa system

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-08-13 17:23:09 UTC
From: Dan Rollman
Topic: 621 Message: 654

John,
Very well said. The City of Mesa and whoever it was speaking on their behalf with the newspaper is clearly playing typical city-politics as they make things up and distort reality to their citizens. The fact of the matter is that Mesa Fire communicates merely by changing channels on their radios with Tempe, Chandler, etc. (those not even on the Mesa system like Gilbert). They don't even need to use mutual aid or "arrange" a meeting on an alternate channel to communicate... they do it daily.

Mesa PD has access to simulcast their VHF channels with the 800 MHz interagency, as you accurately said, to facilitate quick and easy communications with Gilbert PD, Chandler PD, and Tempe PD.

On the fire department side, having 800 MHz digital radios will only make inter-agency communications MORE difficult. Even if you concede the unlikely-idea that ALL agencies cooperating on the Phoenix Regional Fire dispatch system would go digital in the near term, and even if you thrown in Chandler FD and say they will too (even though they haven't even mentioned such a move), that still leaves Rural / Metro. Does anyone really think Rural / Metro is working its way up to an 800 MHz digital trunked system in the near future? I certainly doubt it. Those who monitor Mesa and RMFD on a daily basis are well aware of how frequently and cohesively the two are now working together these days. Gilbert is working just as well with Rural, now having automatic mutual aid with them for incidents in South Gilbert, Queen Creek, etc.

Logical reality tells us that this relationship will be severely damaged to the detriment on all the citizens in the East Valley once this system is operational. Unfortunately it's hard to imagine that local fire and police administrators are getting any better MISinformation than the newspaper got for that article so, like the MCSO cop who now carries a cellphone in case of a 999, they'll discover the mis-truths later on down the line... when it's too late. Hopefully everyone understands that my and other scanner listeners negative comments are not merely "taking offense to the move because you won't be able to hear it". To the contrary, digital scanners will be available well before the late 2002 time line I've been hearing, so it won't be any problem for us to hear. But unfortunately we will have to listen at that time to peoples lives placed in danger as the East valley takes a major step backward in their ability to safely and reliably conduct inter-jurisdiction automatic fire aid. An expensive step backward at that.

Unfortunately John as you take tallies on how many people are "voting" for each side of the issue of intentionally using poor written English to make posts difficult to decipher, you don't get the private email that arrives in my ArizonaScanner@... (list owner email) daily. None of them disclosed what age they started reading at, yet all who have written are absolutely astonished that people can be so child-like and disrespectful as some of the garbage that has floated across this list... of course not just Danny's new-found language, but prior incidents. All I am asking is for people to act like regular adults, speak in our normal American English, and understand that the vast majority of people signing up for the list are not here for jokes, games, daily public service announcements on air quality, or to observe insults be hurled back and forth. They're here to learn about the hobby they enjoy, and given the opportunity, share their own knowledge with the rest of us. I don't make this up, it comes from all the private emails I've received, many recent ones coming from people letting me know why they are unsubscribing from the list. We're not here to take a vote on what the list is for... As the list owner, I already said what it is for when I started the list, and now I am asking for those who clearly don't work so well in structured environments to give it some effort, and try to keep things clear, on topic, and to the point. That way, we all benefit and can learn and enjoy our hobby through this list.

Now, with that said, THANK YOU to all of the people who continue to post useful, relevant information on this list! I have certainly enjoyed reading the vast majority of the scanner-related posts that flow across here each day! John and Danny included... With the exception of just a few recent posts, Danny has provided interesting information from Mohave county. I look forward to the great information exchange we have going continuing! Thanks everyone.

Dan Rollman
List Owner

P.S. By the way, the first amendment has only to do with the governments role in regulating speech, not private individuals like those who operate and are members of an email list.

Darn frustrating. Still new to trunking trying to do the impossible, I'd bet. Who's the Yuma expert? I wouldn't think they'd be too modern, but is the E.F. Johnson system they use the same as the PCSO first trunk system? Sure E1 (Mot type 1 @ 800 mHz.), ED for EDACS freq's, E2-800 (Mot type 2 800's), E2-900 (Mot type 2 900's), E2 Hi (Mot type 2 VHF) and E2 UHF (Mot type 2 UHF) make sence... Setting the type is my hurdle. What type is the johnson? Is it even possible to program a Pro-94 to listen to trunked in Yuma?

Tom,
That's a tough call. EFJohnson systems use either the LTR protocol or Enhanced LTR protocol. I believe a Pro-92 will do regular LTR. To the best of my knowledge, there is not yet a consumer-available scanner that does Enhanced LTR. PimaSO's NEW system (and EF Johnson system) is Enhanced LTR, which is why we haven't been able to monitor it,

Basically, it works like this:
Agencies who buy an EFJohnson System pick either a MultiNet I or a MultiNet II system (both are essentially "models" of EFJ systems). If they chose an EFJ MultiNet I system, then their system uses LTR, and can be monitored on the Pro-92. If they chose more bells and whistles that the MultiNet II system offers, than their system uses ENHANCED LTR, and cannot currently be tracked. Pima County SO picked an EF Johnson MultiNet II system for the NEW system, which is why we can't currently track it. So if Yuma also installed a Multi-Net II system, you're out of luck. But if they have the older MultiNet I system, which uses regular LTR (not enhanced LTR) then it can be tracked on the Pro-92. I don't think the Pro-92, however, monitors anything but Motorola and EDACS, so it doesn't even play in here.

This all is as I understand it. If I mispoke, someone correct me. :)

Anyone who understands radio systems can certainly write in to the papers with their comments. John you sound like you have a pretty good understand of mutual aid, etc. If someone writes in and it gets printed, I'll officially designate that person the "ArizonaScanner List Member of the Week". I'll even type you up a little award. :)

Unfortunately since you have to disclose employment to local papers before they will print something you send them (they often follow up, in my experience) a letter from me would look a little too "conflict-of-interest-ish" with my book and all. Certainly other local hobbyists who can't be connected with any sort of scanner-related business would be more likely to be printed. Perhaps a Mesa resident would be best!

Dan

>Ambulance.

Andrew,
Correct, NativeAir is LTR, and the Pro-92 will track LTR. But PimaSO (and likely Yuma) are ENHANCED LTR, which is not the same as I understand it. I know I was unable to track Pima SO using a Pro-92, because they use Enhanced LTR.

Dan

663. Re: [ArizonaScanner] Pro-94 for Yuma trunking?

On-line sources show the Yuma Public Safety system as being of the Multi-Net II type. If that is in fact the case, there is no possible way to trunk-track it that I know of. It may be possible to still monitor the frequencies as conventional frequencies and catch some of the action. Good luck...

Wayne
Tucson

Yuma, AZ
Yuma, AZ is using an E.F. Johnson Multi-Net II trunk system for police, fire and soon, public works. The system is 10 channel primary with 5 channel backup;
130 mobiles and 230 portables.

Thanks to Don Wingo, N6LHZ (dwingo@...) for the Yuma information.

System: Yuma, City of
County: Yuma
Type: E. F. Johnson
Use: Police, Fire & Public Works Departments

Frequencies:
856.0250 856.2250 857.2250 858.2250 859.2250
860.2250 861.0000 862.0000 864.0000 865.0000

OK let me continue to update you as to the mysterious comm's I hear every night when I retire. The freq is 170.025. Some of the transmissions I'm hearing are: We got 21 bats tonight right here near the mine? Bob if you will walk over near the eastern edge of the Mesa you will get better readings. I've got a reading on 288 & 589. Bob states that he has a very strong reading on 337 from the East @ 210 degrees, Pat says OK everyone let's get on it.

I know that these statements may read like the ramblings of a disillusioned persons, but I'm really trying to figure this thing out. One evening I heard them mention Princess Trail & Sugarloaf Mtn {there are two of them near me, one @1239', the other @ 977'}. I researched these 2 place names on my BLM land management guide & found them to be fairly close to my home, yet they are located about 10 miles North & 12 miles East way the heck out in the desert. Is it possible they could be Fish & Game people trying to do head counts on Big Horn Sheep or something like that. They never mention sheep or any other game for that matter. Any suggestions?

Sounds to me they're tracking bats with RDF equipment. Could be Arizona Fish and Game,Federal Fish and Wildlife or university researchers. Maybe if you have the opportunity,take a drive out in the direction of their locations some night? I could do it this week since I'm on vacation,but I'm in Peoria. LOL. (Northwest Phoenix metro area.)

Tim, as I've stated before I live out on the West Coast of the Arid Desert State of Zona {Bullhead City}, where it only gets dark, it nerver gets cool {not this time of year anyway}.

The name of the map you asked about is: BLM SPECIAL EDITION 1999
SURFACE MANAGEMENT STATUS
DESERT ACCESS GUIDE
ARIZONA CALIFORNIA DESERT DISTRICT
DAVIS DAM AREA
SCALE 1:100,000

John, are you serious about bats? Good lord who would want to spend there nights out in the HOT desert tracking bats? Why? What is the purpose of it?

Danny McLean < :-)

> Good lord who would want to spend there nights out in the HOT >desert tracking bats? Why? What is the purpose of it?

****
I'll bet John has "nailed it".... researchers of some sort,
RDF'ing some sort of nigh time critters, and from your previous msgs.
(mentioning a cave) , bats is probably it!.... I saw something (written)
in regards to RDF collars a long time ago, and it seems to me that the
transmitters (low power) were somewhere in the upper VHF range, 160 to
180 mhz range.... you might try scanning that generic range and see if
you could pick up the beeping.
Just a thought!

668. info on digital in prescott

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-08-14 18:49:16 UTC
From: jerry B
Topic: 668 Message: 668

i was talking with a friend who is highly knowledgeable on what goes on with digital radios and we were discussing with the new service in prescott with lifeline ambulance just one company who will lose there service very soon

i was told i can pass this info along about he discussion we had hope someone finds this interesting

Yes Nextel will be a bust around here
absolutely no way that lifeline or anyone else will have coverage in this county
on 900 MHz I have made extensive test here at work for some govt. agencies on
800 and 900 and found the mobile to base station coverage to be an average of 4
miles or less. And with the no new towers over 35 feet ordinance in Prescott and
the county the end user will be the end looser. My test were with a 20 watt
base, 10 watt mobile and a 13 dB gain base antenna using both analog and digital
modulation, the digital range was typically 30 percent less (worse) than the
analog FM and this was using a similar modulation scheme as that used by
Nextel/Iden. Also when I was working on the IDEN project at motorola we came
to the conclusion that we needed to go with a minimum of 14 30 watt power
amplifiers combined together at each base station just to get a reliable 15 mile
range and this was down in the Phoenix and Chicago metro areas where it is
flat, no major hills to kill the signal as up here. VHF would be a killer for
lifeline no doubt about the range and the best cost per dollar. Also the Nextel
handset was not made for PSB meds use, the handsets break when they are dropped,
a police dept. down in the south east tried it and the locals had the chief and
the comm. dept. fired as the service was crap and the cost about 20 to 30 times
thier old VHF system. Also there is not instant access with nextel, you do not

pick it up and made a medical call you turn it on and wait to see if
you get
access and with all the hills and mtns. around here what you
typically receive
is a no-svc message. why do you think that the forest service and
everyone
else is sticking to VHF ?

669. DPS/EMSCOM maps

Yahoo group: ArizonaScanner (1999 — 2002)

To answer some of the questions I've gotten.

"HPB3" is the "District" map some asked for.
It also gives the frequency (and PL) for each of the
patrol districts.

"HPB1" shows the tower locations and what radio channels are
on each mountaintop.

"HPB2" is the system map for the "STATE" frequency (460.225).

The URL for the files area is.
http://www.egroups.com/files/ArizonaScanner/

You must be registered with E-Groups to access this area,
and allow cookies (a paticular item I don't care for).

Go to the folder marked "AZ Highway Patrol Maps"
and then click on the map you would like to view/download.

When the map is finished loading, you can save the file or just view it.

They are EXTREMELY narrow band transmissions.
I remember seeing a piece on one of the ham sites
asking for help tracking owls and they said you had
to be able to distinguish down to less than 1kHz,
maybe SSB? I think you needed a BFO????

Walter,
Those are great maps! Thanks for providing that info to us.

Date: 2000-08-14 22:31:07 UTC
From: walter.howard@juno.com
Topic: 673 Message: 673

FLASH - FLASH

New metro area call signs.

You just started to get the hang of the "Metro XXX" callsigns and the're changed again.

Shades of "Adam 12".

New callsigns take the form of

(Number) (Letter) (2 Digit #)

The first Number is the shift or assignment.
1= Shift One
2=Shift Two
3=Shift Three
4= Unassigned
5= Administrative or Special Details
6= Unassigned
7= Motors

Letter is the Alpa designator for the "Beat"
W(illiam)= West
E(dward)= East
C(harles)=Central
D(avid)= DUI Squad
R(obert)= Reserves
S(am)= Freeway Service Patrol (Code 34 drivers)
A(dam)= Administrative

2 Digit #'s are squad and officer as before.

Folks track bats for the same reason they track any other animal. To
learn it's habits,it's range,what it eats,their health,etc. As for it
not getting cool up there,well,sometimes you just have to suffer to
do your job. *grin*

Does anyone know why Flagstaff fire is dispatching in Ch. 4 "Primary Fireground" instead of Ch. 1 "Dispatch / Operations". Any information would be appreciated. Especially an updated list of channels/frequencies if one exists.

Thanks,
Dennis Rice

BTW: I just bought the Southwest Freq. Directory. It's great! Very informative and up to date (well, as up to date as possible.)

676. Hotel Net...

From: Shan Martin
Topic: 676 Message: 676

Greetings Everyone...

I've enjoyed the discussions although sometimes I do feel out of my league. I just like to listen to my scanner and don't quite understand all the technical stuff. I'm learning because of the discussions though.

I have a friend who works at a swanky hotel over in Paradise Valley (The City). He tells me that several of the hotels are on a shared system called 'hotel net'. He says that there are a couple of frequencies they use. I guess one to transmit and one to receive and also they are plugged into some kind of emergency freqs as well. They communicate back and forth with each other regularly. These are not just the same hotel companies in different locations, but several different hotel companies cooperating together.

Any info on what frequencies they might be using?

Thanks,

Shan

Hi Shan!
Nice to hear from you again! Hope all has been going well. HotelNet is a cooperative effort of Paradise Valley, City of Scottsdale, and the hotels that are in each. See page 114 of SWFD-6, and you'll find the frequency of 460.350. It is a repeater, so it has a different transmit frequency, but 460.350 is the one you'll want because it is the output. It connects local police to hotels, and hotels to police. The cops broadcast suspect descriptions and the hotels keep an eye out, etc. Good listen on occasion.

I have found another 900MHz Trunked system in the valley without any active FCC listing for Arizona. This system has many user's as do all the others I have posted in the past security/towing/taix and many others for those looking for that company or business not listed try this and the other 900MHz systems found on this months postings
Motorola E-2 900 setting
935.6000
935.6125
935.6250
936.6125
938.5875
938.6000
Happy scanning
Dave

Just to let everyone know

Native American Air will begin service in Buckeye beginning Monday.
They should be operating on a 450 mhz LTR trunked system.

The designation is Native Six and it will replace the helicopter that was
previously based in Winslow.

The aircraft is a new A-Star B-2 Helicopter

I am sorry I dont have that information. I am trying to work on it.
I believe that another person on this list has figured out the sytem using
his new Pro-92A scanner. David R if you are still on this list can you share?
When I do find out the info I will be sure to let everyone know!

Hey Thats a great idea! Next time I take a sunday drive to the state of Texas I'll be sure to ask them. The helicopters are all operated by Omniflight in Texas, and they choose not to make the information readily available. Radios are all installed in Texas before the aircraft are delivered, so the chance of finding a radio tech is about as good as finding snow in Phoenix. If a radio stops working they go to the shelf get an extra one, and ship the bad one to Texas.

689. PMT frequency ???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-08-21 07:43:22 UTC
From: Marc Cuizon - WH6CJD
Topic: 689 Message: 689

Hiya,

Tuning around tonight, I was hearing medical-type communication on 150.830 Mhz, with a 110.9 PL. I tried looking up the frequency on line but Percon came up with nothing and the FCC search page wasn't working.

However, if I copied the callsign correctly (WNKD226), I found that that to be the callsign for PMT. Has anyone else heard them on this frequency? I'm not that keen on medical radio, so I'm not as up to date on this as other stuff, but it started to intrigue me :-)

Hopefully this is something new... if not, at least it's something interesting to listen to < grin >.

Marc

690. Fwd: From A Friend: 'Channel 6000 - Portland Fined For Emergency Dispatch Failure'

I "own" (ha!) the "800band" egroup list <
http://www.egroups.com/group/800band > which discusses plusses & minuses of
these systems. I'm especially interested in "published" stories, such as
newspaper accounts. For example, the Orange County, CA story has been one
of our recent ongoing topics.

Anyone know if the Maricopa system's failure on about 7/30 was covered in
any media?

At any rate, come on by and look at the group if you're so inclined.

I subscribed to the Emergeny Mail Network and so far I have been happy with
the service.
In Arizona, the only real group of interest for me was the weather
stuff. I can tell you that it is very fast in alerting you anytime a
Severe Storm Warning has been issued or cancelled.

You can also sign up for utility outage notification, Location of Emergency
supplies, such as sand bags etc, and organ donor notifications.

The system will page you to an alpha pager or text message cell phone or
send a traditional email. So far I have been very happy with the service
(and its free).

I did subscribe to Earthquake info out of Los Angeles on the site, but as
of yet have not received any pages on it. I dont recall any recent
earthquakes, so I would presume my lack of receiving pages is a good thing!

Any questions, give me a hollar!

Mike

OK OK I didn't know that so lets see here I tell you what next time your around one of the new radio's let us know what it looks like Brand name, model # that sort of stuff then the next step would be to monitor all the local 450MHz LTR systems in the valley, if that doesn't work I have a frequency counter I would be more than happy to let you use to fine them while transmitting on the ground or ask a pilot to get a radio check to show you how good these new radios are? Just some thoughts

I think you may be thinking of 153.830, but this was definately 150.830. I thought it was kind of a weird place in the band for medical talk. I even used a totally different radio on the same frequency just in case it was the 1st radio I was using, hehe.

Thanks for the reply though... I was beginning to think everyone thought I was crazy (ha ha hee hee ho ho...)

> could be important!

And, the Portland Expert responds :)

The system here is a Motorola SmartZone (soon to be OmniLink) 800MHz Trunked Radio System with (currently) 14 repeater sites (4 of which are simulcast).

The core areas of Multnomah County (which is "home" to the primary users of the system: Portland Police Bureau; Portland Fire Bureau; Bureau of Parks & Recreation; Water Bureau; Bureau of General Services; Bureau of Environmental Services; Tri-Met; etc., etc.) are fairly well covered, but there are a few areas that, due to geological formations (buttes, hills, etc) have sporadic radio coverage. Two of those areas are "high activity" areas for Police.

The system is currently analog with one repeater equipped for DES encryption -- and the only system user that is authorized for encryption is the PPB Drug & Vice division, and they only use encryption when they are "Code 5" (stakeout).

The city HAS filed an appeal, and will likely win it.

BTW. Portland's system has been called "The Best" of Motorola's SmartZone systems. This is only recently, as in the late '90's (after the system had been fully operational for two years) there were two catastrophic failures. Note that the fines referred to in the report do not seem to be related to these failures, but to something more recent.

Please e-mail me privately if you would like to hear more about this system; it's not *directly* related to AZ. (The problems however, I think, will be -- especially with being full digital -- which is where Portland is heading).

Joe

I think the last sentence says it all...." (The problems however,
I think, will be -- especially with being full digital -- which is where
Portland is heading)."
Those of us who work in or with Public Safety Communications, owe
it to ourselves to keep abreast of situations like Portland, and try to
keep the "Safety" in Public Safety comms.
Just my 2 cents worth!

group,
I'm new to the area and to this group. My scanner interests revolve around monitoring fire departments. I am in the process of mapping all Fire Stations in the Valley on software by DeLorme called Street Atlas USA version 7.0. When complete I will load to this groups file area.
I need a little info if anyone can help I would be grateful. I am using Station address info from a great little directory which I'm sure most of you are familiar with called SouthWest Fequency Directory. It has about 98% of the info I need.
Tonite I heard a dispatch on PFD Channel 1 for Engine 199. I can't find any info in SWFD. Anyone know which Station its quartered at and its street address?
Station 158 is listed, anyone know what aparatus is quartered there? Is it a closed station?
Looks like Mesa is planning to build a new Station for Engine 216. Anyone know the address and/or construction schedule?
TIA,
Paul

Anytime you hear an Engine 199 or an Engine 139 etc, it is a spare truck
that has been added into the cad for some reason (they are
temporary) Whenever Sun City's ladder and Ladder Tender both go down, the
crew gets into a spare truck called engine 139.

From time to time you will hear Engines 97-99. Any 90's series truck is
an Academy truck that is staffed with <2> training captains and <4-6>
academy recruits. These truck come into service once every three months
for a period lasting one week.

For the City of Mesa I know thier Web site has lots of info regarding
the stations and thier locations and there may even be something
there about the new one's in the works or under construction.
Another place I saw this information was the FCC web site giving
station locations for the transmitters that are inside each station
Freq's to search FCC site for
154.340
159.015
154.235
159.015
153.950
159.135
These should give allot of data of each station
Also pick up a copy of the Southwest Frequency Dir. for the best
listing of location and equipment
Hope this helps
Dave

712. VHF trunking around yet?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-08-23 06:23:11 UTC
From: Marc Cuizon - WH6CJD
Topic: 712 Message: 712

Hello,

I've been noticing something lately... maybe it's been around for a while, but I just hadn't paid attention.

I work for AAA/Arizona. 4 of our channels are VHF-Hi, and one is 800 MHz conventional. I've been noticing lately on one of our VHF channels. There is something keying up every couple of seconds either right on or very near the frequency with a very short carrier. At first it was just annoying, but then I started thinking... possibly a sign of an LTR system somewhere? I didn't think there was VHF trunking, so I did a search in the (YG) service code on Percon, and I got all kinds of hits.

I haven't heard any voice traffic, just the key up every few seconds. If this IS a new radio system going up, I can only think of the potential for interference < shudder >.

Right now, the mobiles don't use PL decode, so I guess we could just have the radio shops turn on the decoders in the trucks to get rid of that noise - for now.

Has anyone out there heard of any VHF trunking in operation?

Marc

Yes there are some systems in the valley using VHF trunking but all the freq's listed as such have no activity on them other than the keying you have herd. I too have herd the keying and that is common with the LRT systems I have monitored in conventional mode having no LRT scanner as of yet. The strange thing about the known systems I have monitored is the lack of any kind of data channel yet I see the frequency hoping of a Mot. trunked system??

Interesting... I'm thinking they are possibly using 6kHz spacing, but I'm not sure. Thanks for confirming the signals I'm hearing once again. :)

In LTR format, there is no data channel; the frequency hopping is done in a different way. Some people say it's better, because there isn't one channel tied up for data all the time.

Soooo... I guess it's going to get interesting at work. I can just hear those crazy tow truck drivers screaming at us about how they can't hear the calls because of interference.

Maybe we'll have to go to 450 trunking, hehe...

Marc

716. Scanner Club Meeting SATURDAY!

Date: 2000-08-24 05:52:28 UTC
From: Dan Rollman
Topic: 716 Message: 716

Hi guys,
I wanted to invite any interested scanner hobbyists to join the members of ICP (Arizona's scanner "club"... Incident Command Page) for our monthly get together at the Fudruckers Restaurant on the NE corner of A51 (Squaw Pk Freeway) and Highland Avenue in Phoenix at 6pm this Saturday. ALL scanner hobbyists are welcome, whether you are an ICP member or not, and regardless of whether you are even interested in ICP membership. The meeting is held at the Fudruckers at 6pm on the last Saturday of each month.

Check out http://www.incidentcommandpage.com/ and click on "meeting" for more info and a Map to the restaurant.

As is usually the case, I will also have a few copies of the Southwest Frequency Directory (now 6th Edition) (www.scannerstuff.com) available for purchase.

Basically, we just sit at one large table and eat and discuss local scanner happenings, etc. Feel free to come on by anytime between 6pm and about 8pm and just look for the table full of handheld radios. :) New hobbyists are always welcome, and feel free to ask other more experienced hobbyists questions to learn more about scanning, particularly with a local focus. The whole thing is very informal, so feel free to come and leave when needed, between 6 and 8pm.

Hope to see some new people there. If anyone has questions about the meeting, you can email me personally.

Dan Rollman

722. Fire Station Locations

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-08-27 04:38:35 UTC
From: Paul Milward
Topic: 722 Message: 722

I have placed a file showing all PFD, West Valley and North Valley Fire Station locations on ArizonaScan@eGroups. The file is in Street Atlas USA 7.0 format. You will need the program to read it. The file has Tags that point to the location on the map and lists all the apparatus in each station. I will post a similar file for the East Valley in a few days. Email me off group if you have questions.

Contrary to many reviews I have found that the 2067 is a good radio with plenty of features. You have to do something your are just not used to when trying to recieve... ATTENUATE! Once that is done your scanning clear and receiving he PL tones fast. I purchased the radio to pick up PCSO using EDACS. Well that was a wash... NO MORE EDACS! instead they are using LTR II. Still I load the freqs in and tell it it is LTR and leave it open. It doesn't track but it is much easier to listen to than EDACS was.

I havent found any usable trunking info for Pima county so I could test the EDACS MO I and II and LTR I trunking. Dan, do you think you could spot me some info as I am gunna buy SWFD 6 when I find it? I would like MARANA and some security company that may be using Motorola.

So Far I am happy with the radio. It is currently $269 at RS. Losta intuitive features!

Happy Scanning

Scott

Scott,

You can find the Marana PD info in the "updates" page under SWFD on the
Scannerstuff website... www.scannerstuff.com
In Tucson, you can find SWFD-6 at PACE on Prince Rd., and Action
Communications on Stone.

Dan

726. Re: [ArizonaScanner] Anyone purchased the PRO-92 or the PRO-2067

Thanks for the Heads up on PACE you guys. I think the 1st version I found was 4 at the HRO in PHX then the next at one (5) was at Electronic City. Keeping any Ham store in Tucson is a good thing! PACE here I come.

Its 2000 and mine says 2000 on it are they only good for one year now?

Back to the original question HAS ANYONE PURCHASED the PRO 92 or 2067 YET?... Just me?

I wanna see if anyone is having the same probs...

Scott

Hi Scott,

If you are referring to the 92A, I've had it for almost a month now, with no problems, . . .unlike the original 4 I took back.

Curious as to the type of problems you are experiencing though?

Dave
daveb1@...

729. About the Pro-2067 or Why wait for the 780 you ask?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-08-30 09:07:50 UTC
From: Scott
Topic: 729 Message: 729

I went back and forth about buying the 2067. I was at the counter twice with money in hand and walked away. After all that I have read about the 2067 and its brother the 92, I was very concerned about its ability to pick up distant stations and its EDACS reception. Here is the deal, I bought it anyway and then realized that:

Since needing a scanner that decodes EDACS and buying one the local sheriffs department quit using EDACS and went to LTR II which no scanner manufacture decodes at this time. So that was no longer a concern. However I have not been sucessfull in setting up a trunk group in any mode as I have been able to find the control channels but not the voice channels or vice versa. (NOT A SCANNER PROBLEM, JUST A DATABASE PROBLEM)

Receiving distant staions is not a problem for me as I tend to concentrate on line of sight stuff anyway due to my geographical location (TUCSON AZ). I did find that using the attenuation function did help with the hissing noise normally associated with low recieve. I attenuated local stations and they sounded MUCH BETTER.

So far, 15 hours in to setting this thing up, I a satisfied. I do highly recommend the software as doing the text setup on 200 channels @ 12 characters per channel is NOT fun. I understand that a bit more control of delays and trunking can be obtained by using the software.

THINGS I LIKE:
FAST PL display
Closed Channel based on PL or DCS (much less interference)
12 CHAR TEXT DISPLAY (ALOT OF INFO)
GOOD AUDIO PUNCH!

THINKS I DO NOT LIKE:
Small buttons
Complicated Trunking setup
No Feet

Not meant as a review but just a bit more info as there is alot of negativity out there on this. This is not to say that in 29 days I might not return it, but so far I really doubt it. We'll see when I get it in the car and hook it up to the whip instead of the discone.

Scott

(As seen in rec.radio.scanner)

730. Re: [ArizonaScanner] About the Pro-2067 or Why wait for the 780 you ask?

Topic: 730 Message: 730

Last month I played with the 2067 for a few weeks before returning it.

I did like the well lit display, but I have to agree with you on the 'lack of feet.' Even after using the Jumbo Feet from RS I found my unit to be slightly tweaked as only 3 feet could maintain contact with any surface. Minor problem though. I tend to use handheld units more anyway and decided to wait for the revised 92. I am not familiar with EDACS or LTR systems at all. My community uses a Motorolla system that gave me fits when attempting to use it in the 'Closed Mode,' with the original 92. That was the only reason for my taking other units back. So far I am really enjoying the A version, although I would have liked for it to be 'scanning' immediately after turning it on. I DO LIKE not having to lock-out and un-lock the control or data channel each day that it changed. And this is my first experience with alphanumeric tagging, which I really like too. Guess I'm satisfied, but not entirely, . . .and I'm sure that is the manufacturers intention, . . .to always leave us wanting more, . . right?
I am looking forward to spending some time with a 780 in the future. Meantime, the battle tested 2006 suits most of my needs. Dave

> Curious as to the type of problems you are experiencing though?

EDACS!
MARANA is listed in this frequency order:
LCN #1: 855.7375; LCN #2: 859.4375; LCN #3: 855.9625

If this is correct it doesn't work for me.

I was able to hear channel 1 in trunk mode when I had freqs 1 an 2
reversed:

859.4375 intercepts here only
855.7375
855.9625 CTRL

It would never show up the second channel. Now I am trying various
arrangments

I hear the control channel on 855.9625 (LCN3) any ideas or is the
radio just hating me at the moment?

I have it hooked up to a discone and it does real well with
attenuation

Look what I found! good info for anyone wanting to program EDACS as
the manual is a bit confusing...

http://www.kahala.net/~davidc/programming.html

NOTE: IF YOU OWN A PRO-94, PRO-2052, OR BC245XLT SCANNER,
PLEASE VISIT http://gtrac.ztn.net.

The following instructions will show you how to program
the Radio Shack Pro-92 and Pro-2067 scanners to properly
receive GE/Ericsson EDACS type radio systems.
In this practice programming example, we will program
the eight (8) channel Honolulu Simulcast transmitter
into Bank Zero (0) of the Radio Shack Pro-92 Scanner.
First, here are the system frequencies, in LCN order.

(1) 866.1375
(2) 866.3875
(3) 866.6375
(4) 866.8875
(5) 867.1375
(6) 867.3875
(7) 867.6375
(8) 867.8875

IMPORTANT: Be sure to read each subpart carefully.
Failure to do so may cause your scanner to track
improperly.

Subpart I. Clearing the scanners memory banks.
1. Clear the scanners memory by turning your scanner
OFF, then ON, and pressing zero [0], and [1] keys
while the main greeting is showing.
2. After initialization, your scanner should now
show a display that defaults to M000. (Bank 0,
Channel 00).

Subpart II. Preparing the Group ID bank to track EDACS.
Failure to properly set Group ID bank to EDACS mode will
cause the scanner to track improperly.
1. Press PGM, TRUNK. The display changes to I000.

2. Press MODE until ED appears in the top-right
corner of the display. The default trunking mode
is now set to EDACS.
3. Press the PGM button again. The top left corner
of the display reads P000.

Subpart III. Programming EDACS frequencies.
IMPORTANT: All EDACS programming MUST begin in
Channel x01 in a Bank "X".
Using the LCN frequencies above, follow steps 1-10.
1. Press the PGM button a second time. The top left
of the display reads P001.
2. Enter LCN 1. Press 866.1375, ENTER, PGM.
2A. Check to see if a "T" and "ED" appears after
pressing ENTER in step 2. If this shows, EDACS
programming is active.
3. Enter LCN 2. Press 866.3875, ENTER, PGM.
Check display for Step 2A before continuing.
4. Enter LCN 3. Press 866.6375, ENTER, PGM.
Check display for Step 2A before continuing.
5. Enter LCN 4. Press 866.8875, ENTER, PGM.
Check display for Step 2A before continuing.
6. Enter LCN 5. Press 867.1375, ENTER, PGM.
Check display for Step 2A before continuing.
7. Enter LCN 6. Press 867.3875, ENTER, PGM.
Check display for Step 2A before continuing.
8. Enter LCN 7. Press 867.6375, ENTER, PGM.
Check display for Step 2A before continuing.
9. Enter LCN 8. Press 867.8875, ENTER, PGM.
Check display for Step 2A before continuing.
10. Press SCAN to begin trunk tracking.

If your scanner is programmed correctly, active
talk group IDs will be displayed in decimal format until
you assign a text tag to it.

If you don't hear anything after a few minutes of
listening, the scanner just hasn't found the control
channel. You can press SCAN to quicken this process.
Also, make sure you do not lock out the control channel.
To program other banks, follow all steps in subparts II
and III. The number of steps will vary depending how
many channels need to be programmed in that bank.

Subpart IV. Programming talk group IDs
Talk group IDs are programmed in numerical order from
lowest to highest. All analog talk group IDs have been
programmed with alpha tags. This way, when moving into
a new transmitter area, you will only need to reprogram
the frequencies in LCN order, instead of programming the
frequencies-alpha tags as well as well as talk group

IDs and their associated alpha tags.
This is the simplified version - the earlier version of this page had too much typing. If you need more help, please send me an e-mail.
1. Press PGM, TRUNK. The display changes to I000. You are now in trunk ID mode.
2. Enter the talk group IDs using the keypad. You can enter them using one, two, three, or four digits, but I suggest entering them in four digit blocks since the display will show four digits.
Example: Enter the ALERT-1 talkgroup, 278.
Press 0278, ENTER, PGM.
The display will now show I001. Enter the rest of the talk groups as shown in the previous paragraph.

Subpart V. Programming text-tags to banks.
NOTE: This mode only works in conventional scanning.
1. Press PGM.
2. Select a channel within the desired bank by pressing MANUAL and entering the bank number (000 for Bank 0, or 200 for Bank 2, for example). Press MANUAL again, then press PGM.
3. Press FUNC then 6. The cursor appears on the 3rd line on the display. Enter the text using the keypad and press ENTER.
NOTE: If the channel is programmed for P/L, DPL, LTR, MOT, or ED mode, the scanner displays mode info on the 4th line.

Subpart VI. Programming text tags to memory channels.
Also: Programming text tags to talk group IDs, see #7.
1. Press MANUAL, enter the channel number where you want to enter the text, then press manual again. M and the channel number appear in the upper left corner of the display (for example, M100.)
2. Pressing PGM changes the display from M to a P.
3. Press TEXT. The cursor appears on the 3rd line of the display.
4. Enter the text using the numeric keypad.
For example, input SIMUL-1 as follows
* "S" - Press 7 then 4.
* "I" - Press 4 then 3.
* "M" - Press 6 then 1.
* "U" - Press 8 then 2.
* "L" - Press 5 then 3.
* "-" - Press 0 then 2.
* "1" - Press 1 then 1.
5. Press ENTER to accept the text-tag.
6. In general, repeat Step #3 to tag the other memory channels. That is, channels starting with

Mxxx.
7. To program text into Talk Group IDs, press PGM, TRUNK, TEXT. The display will change to I000, talk group ID mode. Then follow the guidelines in steps 3 and 4 above.

Subpart VI. Other pertinent information.
1. GE/Ericsson system frequencies are arranged in a Logical Channel Number (LCN) order by transmitter location. What this means is that each system has its own set of frequencies per transmitter arranged in a certain order. You must program your scanner in the LCN order given. Otherwise, your scanner may not trunk track properly.
2. Not all areas in the same district transmit on the same frequency. What this means is that each transmitter covers a certain area on different frequencies. As you move to a different area in the same district or even a different district, a stronger transmitter covering that area will broadcast the same information, but on another frequency.
3. On EDACS capable scanners, only ONE EDACS system may be programmed in each bank. Programming multiple EDACS systems will confuse the scanner because:
- The scanner can only monitor one control channel at a time.
- The control channel you're listening to is associated with a particular LCN order.
- Because each channel has its own LCN order, the scanner will not know which LCN to switch to.
4. The Pro-92 EDACS talk groups are in decimal format as opposed to the Agency-Fleet-Subfleet format that is found on many Uniden & Radio Shack scanners. Talk group conversion tables can be found at http://gtrac.ztn.net.
5. All EDACS programming of LCN Channel 1 begins in Channel x01 of a Bank "X".
6. The control channel must NOT be locked.
7. The scanner must be able to lock-on to the control channel in order to trunk-track properly. Trunked systems rely on the control channel to find the correct data for the radio system you're monitoring. When you lose reception of the control channel, the scanner loses the ability to track properly.
8. It is okay to program conventional frequencies in an EDACS trunking bank, but be sure you DO NOT disturb the LCN order or otherwise program the

scanner out of LCN order. Mixing a different
type of trunking system with an EDACS system will
cause your scanner to track improperly.

Subpart VII. Troubleshooting and other information:
Although the Gtrac website focuses primarily with the
BC245XLT, Pro-94, and Pro-2052 scanners, it also gives
you a good source of trouble shooting information. The
GTRAC website URL is at http://gtrac.ztn.net.
Determining the LCN order on the Pro-92 is easier than
ever! If you are having difficulty figuring out the LCN
for a particular transmitter, manually tune to a control
channel, and if you're in MANUAL mode, the display will
read CTL-01 when the system is not busy. The control
channel in this example is in LCN #1.
If a user keys the transmitter, the display will change,
for example, from CTL-01 to 03-0375. Remember, the
format is LCN-Talk Group. From there, all you need to do
is list all the active frequencies on a sheet of paper,
and determine the LCN position of the voice channel. If
you have access to a second scanner with 800 MHz
capabilities, your job will be a bit easier to hunt down
those LCNs!

Happy Monitoring,

Hi Dan

Using the Scout this past Monday evening, I got some interesting results.

At GCC that evening, got lot's of hits
in the 800 Mhz cellular band, but the following
frequency is a mystery to me.....

FREQ HITS

588.585 1 The Interceptor was reaction-tuned, but I heard no
audio.

Subsequently, I went over to an 'open' house over at Cholla Junior High,
which is part of the Washington Elementary School Dist.
I got the following, mostly from inside their gym. There was an FM wireless
mike in use, and some of these frequencies may correspond to that use? I
didn't use the Interceptor. Bear in mind that the Scout only displays 3
decimal places
-- so split freq pairs, etc., round up or down. Scout can be as much as 3
Khz off if it's
a weak signal, too. Strong hits are accurate, though.

144.750 2 some 2M activity
145.190 7

189.359 1
187.461 1

377.234 1
376.583 1
376.506 1
376.747 1
376.618 1
379.851 1
375.882 1
381.568 1
379.950 1
376.861 1
375.007 1
376.439 1
375.741 1

435.030 23

439.834 1
439.659 1
439.711 3
439.799 2
439.811 3
439.821 1
439.900 1

462.687 2 I wonder if this is their admin/security HT freq?
Could also be 467.100, as I got that one last week?

880.500 +++ Hi sig strength on this one, so many hits. So many hits.
Cellular tower right across the street....

Tim,
Those two scanners don't have a PC-interface port on them, so there is no
way to hook them up to any kind of computer software. The newer scanners
that can be programmed via a PC and software can do that because they have
a special plug on them and a cable that allows the radio to be connected to
the computer.

group, I'm new to the area and to this group. My scanner interests revolve around monitoring fire departments. I am in the process of mapping all Fire Stations in the Valley on software by DeLorme called Street Atlas USA version 7.0. When complete I will load to this groups file area. I need a little info if anyone can help I would be grateful. I am using Station address info from a great little directory which I'm sure most of you are familiar with called SouthWest Fequency Directory. It has about 98% of the info I need. Tonite I heard a dispatch on PFD Channel 1 for Engine 199. I can't find any info in SWFD. Anyone know which Station its quartered at and its street address?
Station 158 is listed, anyone know what aparatus is quartered there? Is it a closed station?
Looks like Mesa is planning to build a new Station for Engine 216. Anyone know the address and/or construction schedule?
TIA,
Paul

Paul,

Engine 199 is the City of Peoria unit that is used when both Ladder and Ladder Tender 193 are unavailable. 8336 W. Emile Zola Ave. It's an older engine that they keep in reserve.

I went looking for stations 158 and 159. Neither of them exist at this time. There is an empty lot at 83rd Drive and Griffin Ave.,actually within the walls of a housing subdivison,which could be used in the future for station 158,otherwise,the city would probably have to purchase some farm field in the area. The address for station 159,5320 W. Luke Ave.,(one block north of Missouri Ave.),is not a valid address. 5320 falls in between two valid addresses,5316 and 5330-something in the middle of a business/light industrial park of sorts. I have heard Brush 159 get dispatched on occasion along with Engine 151,but don't know where it's stationed.

Could you provide me with info on how to get the software for Street Atlas,and how to utilize it? I'm not familiar with it.

Hey guys,

The frequency of 460.350 is also used by the City of Peoria police,for their channel 5. (CTCSS 141.3 Hz.) It's used for car-to-car and information,as well as off-duty purposes such as ball games atthe sports complex and the high schools. I've never heard it used by the Hotel Net. Are you guys hearing the Hotel Net,but not the Peoria police over there? If it is shared,how does Peoria get the citywide coverage they need,without it being heard over there,and vice-versa?

Hi Shan!
Nice to hear from you again! Hope all has been going well. HotelNet is a cooperative effort of Paradise Valley, City of Scottsdale, and the hotels that are in each. See page 114 of SWFD-6, and you'll find the frequency of 460.350. It is a repeater, so it has a different transmit frequency, but 460.350 is the one you'll want because it is the output. It connects local police to hotels, and hotels to police. The cops broadcast suspect descriptions and the hotels keep an eye out, etc. Good listen on occasion.

Dan

Greetings Everyone...

I've enjoyed the discussions although sometimes I do feel out of my league.
I just like to listen to my scanner and don't quite understand all the technical stuff. I'm learning because of the discussions though.

I have a friend who works at a swanky hotel over in Paradise Valley (The City). He tells me that several of the hotels are on a shared system called 'hotel net'. He says that there are a couple of frequencies they use. I guess one to transmit and one to receive and also they are plugged into some kind of emergency freqs as well. They communicate back and forth with each other regularly. These are not just the same hotel companies in different locations, but several different hotel companies cooperating together.

Any info on what frequencies they might be using?

Thanks,

Shan

Hello Tim,
If you can find one and don't mind modifying your radio the CE-232 will work to program the Pro 43. It was the same Computer interface that was 1st used on the Pro 2006. Bill Cheek, the marketer of the CE-232 passed away in July.

Hi John,
Thanks for the info on 158 & 159. Apparently, for the smaller departments, any apparatus ID ending in "9" is a reserve piece. I got the info on Station locations & apparatus from the "Southwest Frequency Directory". Its a GREAT resource. I've been here for a month and with this book its like I've been here much, much longer. I can find everything I want, freqencywise, in it.
The software I use, StreetAtlasUSA 7.0, by DeLorme, is very good and easy to use. I purchased it at Fry's Electronics on Baseline in Tempe. There are 2 toolbars on the interface. "Map Toolbar" and "Routing Toolbar". I used the "Locate Address" on the "Map Toolbar" to pinpoint Station Locations. When search is finished close the locate Dropdown and rightclick the location. Choose either "Add as Via" or "Insert as Via". A purple dot appears and rightclick again to identify the point, for example Station 158. Then use the "Draw" icon to open a submenu and use "Draw MapNote" to caption each Station with assigned apparatus and address. After the edit window closes, drag the caption on top of the purplr dot. Thats it.
After all information is loaded into the file, you can use the "Manage Stops & Vias" button on the "Routing Toolbar" to find a specific station. The button is yellow and to the right of the GO button.The map can be viewed from a "continental" scale all the way down to 1/100th mile.
The only limitation is the quantity of Stops and Vias in a single file, 94. So I had to make 2 files, one for Phoenix and west valley, one for east valley.
Paul

Greetings Phoenix Scannists,

I'm in Phoenix for a few weeks on business. I'm in the vicinity of 17 & Thunderbird, on the West side of the hotel, stuck on the 2nd floor.

Reception for Phoenix, Glendale, Peoria, Surprise, etc. is fine, but I'm not able to get any of the East Valley at all (Tempe, Chandler...Mesa is spotty).

Obvsiouly, I'm limited on what I can do, antenna-wise. Presently, I'm using an RS mag-mount all-band for VHF & UFH and a mag-mount cell ant. for the 800 stuff. Does anybody thing that an yagi pointed southeast would help, or am I just out of luck?

Thanks for any input.

Two possible scenarios at work...

1. Hotel and PPD on different CTCSS tones? I haven't checked, but
they might be.

Or

2. Paradise Valley too far from Peoria to really matter.

I think 3 - all of the above.

-Phil

Hey Paul.... you neglected to mention anything in ref. to the programing cables and software!... But, Hey $400 sounds like a good deal!

On an unrelated note.... I was doing an installation on our local "Under Cover, DUI / Agressive Driving" vehicle, and I noticed that it was equipted with the Kustom Signals on board video taping equiptment.... a slick little unit that consists of a dash mounted camera, a control panel (head liner mounted) and a vcr portion, which was trunk mounted. Mounted next to the vcr pack was a vhf 1/4 wave antenna... upon further inspection I found a label explaining that the operating freqs were... "F-1 169.445" and "F-2 170.245". I never got an opportunity to ask the officer, but I am assuming (dangerous here!) that these are the freqs for the wireless mic that the officer wears when he makes a stop, and starts the recording!
Just thought someone would like to know this info!

In my law enforcement experience, those two frequencies are pretty standard
for the lower-end Kustom Signals and Eyewitness camera set-ups. It really
gets interesting when two or more units on the same wireless mic frequency
are on the same traffic stop and try to record. :)

Dan

If I remember correctly, the "order" of comms is like this:

For take-off: clearance delivery, ground, tower, departure, center (ARTCC)

For landing: center, approach, final, tower, ground

I think :)

755. Caught interesting traffic at BOB

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-09-17 16:03:10 UTC
From: Tom Kelley
Topic: 755 Message: 755

Hi All

I brought my Interceptor with me to the game yesterday, and caught an interesting freq in use somewhere between 150-175 Mhz according to the device. It was clearly the traffic between camera operators and a control room that controls the feed to the Jumbotron. I heard them banter about which fans to present, upcoming breaks, etc. When they weren't talking over it, I also heard the continuous feed from the BOB PA system. Interesting to hear that, and the acoustically delayed PA too! One of the voices doing the bantering, is most certainly the announcer that everybody hears on the park's PA, too. When nobody was saying anything, it was an open carrier, with at least one or more open mikes, too.

I didn't bring my scanner, but if I had, I would've set a search mode in this band segment to locate the exact freq. I don't think my Scout would've snagged it, as it operates on too much a near-field than the Interceptor does. (For example, the Interceptor hits on high power everything from South Mtn everywhere in the Valley if I don't lock out those freqs....)

Maybe Dan already has this freq in the SWFD?

And my guess is that Approach and Tower have diffrent freq. depending on what direction the air traffic is coming from.

You are being blocked by Shaw Butte and North Mountain.
Stand outside and look East. That antenna farm is Shaw,
and further East is North Mountain.
One of the major sites,Thompson Peak, is almost due east of you
on the other side of Shaw/North Mtn.
You need to get a motel either north or south of there to
get much of anything on the east side. Near the MetroCenter Mall
would be a good place, especially if you could get 3rd or 4th floor
on the east side of the building.

761. No more FOR SALE items

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-09-19 05:40:11 UTC
From: Dan Rollman
Topic: 760 Message: 761

Ok folks,
Guess I need to jump in here again. The purpose of this list is not to sell cellphones or two way radio speaker microphones, particularly by people who aren't even in Arizona. It's for the discussion of the radio scanning hobby in Arizona.

From now on, there are to be no more FOR SALE items on ArizonaScanner at all. This simply isn't a list designed for the buying and selling of electronics or any other item. I have changed the welcome message and list purpose to state that for-sale posts are not permitted. Anyone who posts any additional items for sale will be promptly removed from the list and will be reported to egroups for violation of list rules.

Thanks for your cooperation.

Dan Rollman
ArizonaScanner List Owner

Hi DJR,
I'm interested in AZ Milcom, as I am moving to Sedona in a matter of weeks.

I do not have a comprehensive list of military freqs. for obvious reasons.

Would it be possible for you to post such frequencies here, or send me your list directly???

then I'll be ale to enter them and see if they are active up here (I sure see them sightseeing!!) and post my results on this list, if others are interested.

Thanks,

Temp Berdan

765. DJ-X10 discriminator

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-09-24 01:22:49 UTC
From: Michael Blackstock
Topic: 765 Message: 765

Does anyone know where the discriminator output from the Alinco DJ-X10 receiver is?

I 'heard' it had an easy output from the discriminator, like one of the jacks on the unit.

Michael

767. ham radio?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-09-24 08:11:31 UTC
From: liferocksj@aol.com
Topic: 767 Message: 767

ok everybody i know this is a stupid question but im just getting into radio as a hobby. Anyway what are ham radios used for? basically why im asking is i want to know if they can be used like 2-way radios. (i know you need a license). If they are like 2-way radios what is the range on them? is it better then those Family service radios?
the reason im asking is that im looking for a transiver that has pretty good range, so I can talk to my friends in other cars when we all go on trips.

thanks

Not a stupid question at all.
Take a look over here.

Someone has asked the same question as you, and there is a chat going on
about it at:
http://www.dougweb.com/ubb/Forum10/HTML/000044.html

also, you might look at:
http://www.arrl.org/hamradio.html

also, take a look at GMRS:

Michael :)

While I can't help you with the DJ-X10 discriminator location, I can provide you with a rough translation of the Russian website that Kevin suggest:

"Technical Information

On this page you will be able to transfer to your computer, program files for the following ALINCO radios:

DJ-195, DR 108,.....etc
and the repeater RS-4/5.

The necessary files that you need may be gotten here. Click on the displayed description and follow the instructions of your program, placing the selected file on a disk."

I checked this site while at work, and don't have my Russian dictionaries with me, but this is pretty close to what it says.

Hope this helps,

John

Hello,

Just heard on the local radion that Davis-Monthan AFB, here in Tucson,
will be conducting a "mock airplane disaster" from 0800-1630.

Unfortunately for me, I'll be at work nowhere near my scanner :(

Enjoy,
John

774. PCSD

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-09-29 22:05:31 UTC
From: jwcooper@u.arizona.edu
Topic: 774 Message: 774

Anyone heard any rumors about PCSD foisting off their Multi-Net system
on some other county agency and going to a new Motorola system? Was
chatting with one of the officers and he said they are having a LOT of
problems with it; much worse than the EDACS, etc. His closing comment
was to the effect that they might get a 'real radio system' -
Motorola. Whatever that means and for what its worth.

Jim

I have not heard any rumors as such, just complaints from some officers.

I hope the 'real radio system' is not digital, for they might not be any
better off.
And we as a scanning community would not be better off also.

But I would support a new system if officer and public safety was in
question with the old system.

And I would hope there would be some recourse against EF Johnson.

Michael

776. Digital Audio Recorder???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-01 20:33:01 UTC
From: Kurt Krueger
Topic: 776 Message: 776

Anybody tried one?

I was just at Target and saw a Memorex 60-minute digital voice
recorder for $49.99. The unit is claimed to have a VOX feature, so it
should work like my VOX tape recorder - except with this toy
I should be able to go through a day's logging very quickly.

Downside - it uses AAA batteries and has no external power
input. I guess I could clip directly to the leads...

Has anyone tried one of these puppies? They're getting cheap
enough to seem like the way to go.

Thanks,

Kurt

777. Unattended recordings of scanner traffic

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-02 14:12:20 UTC
From: Tom Kelley
Topic: 777 Message: 777

Hi All

Noting the previous post about using one of the new digital recorders with VOX:

With my present cassette unit, I have the ability to change tapes immediately when they're full, or when I need record something else. And I have different tapes for use with differing types of traffic that I'm trying to acquire. For example, I have one for just local television and radio stations traffic, and another for just 2M Oscar satellite traffic.

***Can this digital recorder be downloaded quickly into a computer in a recognizable format?

Seems to me that if one has to retrieve the accumulated traffic that the digital unit has acquired, over to a cassette later, in real time, for archiving, then having the digital unit has introduced an extra step.

I also use the remote turn-on that these cassette recorders have always had, in addition to the VOX, as my 16 Ch. Bearcat has squelch-operated relay contacts. I've found that I've always gotten better recordings using that feature than with a VOX.

Can anyone tell me anything about Arizona Rangers? I recently saw two 1/2 ton pickups in the south tucson area with a very small circle emblem on their doors and the word Rangers underneath. Both trucks had stubbie antennas. I did not have time to look more into it. They appeared to be native americans possibly and were on the tohono oodham reservation. Any help would be appreciated. Also what is tyhe difference between DPS and highway patrol? Just names or what?
thanks

Scott

> Scott The Arizona Department of Public Safety (AZ DPS) was
established in 1969 by the Arizona Legislature. The Arizona Highway
Patrol was made a part of DPS by this enactment, transferred from the
Highway Department(now the Department of Transportation-AZ DOT). The
Highway Patrol is the uniformed division, and is responsible for
enforcing traffic laws on all state roads, highways, and streets.
They also have responsibilities to enforce state statutes, throughout
Arizona, and provide manpower to assist other cities with police
services, when requested. The Department of Public Safety consists
of many bureaus and divisions, including Telecommunications, State
Crime Lab, Criminal Investigations, School Bus Inspections, Licensing
(Security officers,Polygraph technicians,Private
investigators),Concealed weapons licensing, Motor Carrier
Enforcement, Gang Investigations, Intelligence, Support(logistics,
security, engineering, planning), the office of the Director, and
Media Relations{I'm sure I'm leaving some out..my apologies} as well
as the Highway Patrol Bureau. The Director of DPS is appointed by the
Governor of Arizona and is responsible for the leadership of the
department. The high regard to which DPS is held by law enforcement
officers in Arizona, is the result of many years of unwavering
honesty, loyalty, and dedication to duty, for all the citizens of
Arizona. The department motto is "Courteous Vigilance".
>I believe this states the DPS mission quite well and, for the
record, I was a member of DPS during the 90's and serve proudly &
faithfully, until I left the department and moved out of state. I am
sure that DPS will continue to serve all the citizens of Arizona, in
2000 and beyond, in the tradition of the men and women that have
served before them.

The Arizona Rangers is a volunteer law enforcement
group in southern Arizona. They provide services such
as security at special events. I am not sure that they
have any "offical" vehicles, but I have seen a few of
thier window stickers around. It looks like a western
star badge. I dont know what they would be doing on
the reservation though.

Topic: 782 Message: 782

I know many of you may think this is spamming but I
don't think it is because it is still dealing with
scanners and scanning.

I have started a group solely dedicated to listening
to scanners using the internet. In this group we can
post websites that host online scanners/shortwave and
others.

I know I enjoy scanning alot here in Ottawa, ON,Canada
But I wouldn't mind listening to scanners online
throught the u.s., canada and other parts of the
world.

So if your interested in learning about these. Please
feel free to join
http://www.egroups.com/group/livescanneraudio

Please post all links and sites to this group.

Thanks and happy scanning.

Im looking for a wide band scanner but dont know what to look for. I did come acrossed a Icom scanner IC-R8500 ranges from 100 KHZ to 1999.99999 MHZ. Also covers AM,FM,WFM,USB,LSB,CW,and RTTY what ever that is . But at H.R.O. it cost 1499.95 is there a less costly one out
there thanks DARREN

If you mean "Does anyone make a Project 25 amateur radio?",
then the answer is NO!!!!
Only public safety radios $$$$$$$$

And by the way, the word at the APCO
(Association of Public-Safety Communications Officers)
national convention in August was that there would be an add-in
board to decode Project 25 for the current TrunkTracker before Christmas.

Still waiting to see.

787. RE: [ArizonaScanner] Fwd: Trunking Database take 2

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-07 00:11:18 UTC
From: Danz, Dan
Topic: 786 Message: 787

NoFreqs is redundant and frequently won't be kept up to date as frequencies
are discovered and added
-- let the database query tell you how many rows it returns with frequencies
if you ever need the data.
(Besides, NoFreqs means No Frequencies, and implies a boolean value --
should be named NrFreqs to be a more meaningful name)

Same thing for the Comments boolean -- redundant data that the query should
tell you ... then it can't get out of synch.

You could also track what the agency users call each talk group (channel
name or number on conventional radios)--- for example, you'll hear somebody
say "Go to 3-Blue" rather than "change to talk group 800032" or "Switch to
PD Northside Dispatch". It's nice to know what that channel moniker
translates into as a talk group number so you can follow the conversation.
It also is meaningful if you're just starting to track a particular system
and you don't know what the groups are used for, but if you end up following
a fire department tactical conversation to the moniker by scanning from
another channel, you can be pretty sure what it's used for.

Do you plan to track callsign?

788. Re: [ArizonaScanner] PCSD

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-07 16:51:37 UTC
From: FLANO
Topic: 774 Message: 788

Jim :)

According to some deputies that I have spoken with, PCSD had given
them the impression before they bought the EFJ's that in a few years,
the radio system would be changed out. Now it seems, they are being
told in their in-service training that the EFJ's may be around for about
two years or less, if the Johnson company doesn't get their stuff
together. This would be much earlier than they were initially led to
believe. Johnson thinks they can fix some of the bugs, but it is
questionable whether it will be satisfactory to the deputies and the
department.

I know that they continue to tweak the system, because my little trick
of just monitoring only three frequencies, no longer works :<

Unfortunately, no clues yet as to what type of radio they might switch
over to in the future if Johnson doesn't get it right.

OK... let me understand something.... recently (aprox a year or better ago) the Pima County Sheriffs office went to the extreme expense and hassle of replacing their old Moto System (type ?, 800 mhz) and went to the EF Johnson Multi-Net system they currently are using. And now they have found out some of the "bugs" associated with the EFJ system (like not enough infrastructure or what?), and now theres rumors flying around that the EFJ system is going to be replaced in aprox 24 months (or so) IF EFJ can't get the "stuff" fixed????... Do I have a good grasp of this situation?!

I tell you what... if the problems are associated with a lack of coverage, that situation wont be solved by "changing systems", if it's because of "inteligability", or access time, again, changing systems (or vendors) aint gonna change that problem!.... All I can say is that I'm glad I aint a resident of Pima County!

Just my 2 cents worth... Long Live Conventional VHF Public Safety!!!!

790. LA County: Agencies' radio systems linked

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-08 16:44:46 UTC
From: ravenfalls@aol.com
Topic: 790 Message: 790

Starting this weekend, sheriff's deputies, county firefighters and California Highway Patrol officers can now talk to each other by radio if there's a fire, pursuit or earthquake.

And it cost only $200 to do it.

The Los Angeles County Sheriff's Department developed a way to connect the radio systems of the different agencies. Nearly 4,000 radios in the sheriff's department, the CHP and the Los Angeles County Fire Department can now communicate as part of the three-month pilot program.

"It's exciting. It's technology at its finest. It's the right thing to do," said Sheriff Lee Baca on Friday during a demonstration of the system.

"How many times have we seen major fires in Malibu or the San Gabriel Mountain? How many times have we seen pursuits? The reality of those pursuits and fires is that agencies cannot communicate with each other," Baca said. "This technology will allow us to talk to each other ... a critical part of crisis management."

At the sheriff's communications center Friday, Baca, County Fire Chief P. Michael Freeman and Chief Mike Brown of the CHP's Southern Division demonstrated how the system works.

Baca got on a patrol car radio, called Freeman in a fire truck who then called Brown who was in a black-and-white unit. All three could hear each other.

The sheriff's dispatcher will contact the needed agency's dispatcher and the field units are then linked. A deputy can talk directly to the firefighter or CHP counterpart he needs. No radio frequency needs changing.

This linking ability was developed by the sheriff's communications and fleet management bureau and the department's electronic communication equipment technician over a five-month period. It's been Baca's idea for sometime now, deputies said.

Eugene Thielman, a sheriff's electronics communication technician, explained that all agencies have a backbone system composed of radio and microwave circuits.

"Like a telephone system without wires," he said.

They're linking the three agencies via that backbone. Brown said that the patching capability solves existing communication problems among

different agencies.

He's excited about the program because he could see the potential across the state and the nation.

"We're all a team," Freeman said. "And for any team to function safely and efficiently, it's crucial that we're able to talk to one another quickly."

791. more on OSHA and the City of Portland:

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-09 00:30:20 UTC
From: ka7pcj@juno.com
Topic: 791 Message: 791

I'm sure that a vast majority of us (scanner enthusiasts) subscribe to several publications, one that I have enjoyed for many years has been MRT (Mobile Radio Technology). In the October 2000 issue (page ps8) there is more news about the OSHA and City of Portland issue. For those of you who don't get this magazine (www.mrtmag.com) I will attempt to relay the gist of the short article. Here goes..... As we may remember, Oregon's division of OSHA fined the city of Portland $3,600 for violations in which "Portland police officers had been able to call for cover on their portables, unable to communicate with fellow officers responding to a call, and they were unable to contact a dispatcher when stopping suspects"
"OR-OSHA identified 3 shortcomings that the city had not addressed. The first was in not making the orange "emergency" button on the handhelds operational" "The second shortcoming cited was not ensuring that officers have adequate radio communications capability in all areas of Portland" "The third shortcoming identified was failing to expand the system sufficiently to keep it from becoming overloaded as new users were added to it."

Thats the long and short of the article... I thought some of you might like to know this info. And if anyone is interested, MRT is a FREE magazine, it deals with most every aspect of 2-way communications, both commercial and Public Safety, and all of the latest gadgets, rulings and products avail to radio technicians. I recommend that you take a trip to www.mrtmag.com and see what I'm talking about.

>Portland $3,600 for violations in which "Portland police officers had
>been able to call for cover on their portables, unable to communicate
>with fellow officers responding to a call, and they were unable to
>contact a dispatcher when stopping suspects"

And to add to this, there was another major failure (FailSoft did, however, work -- which is something that these articles seem to leave out all the time -- they DID have communications) last week, and now the Portland Police Association is making another formal report to OR-OSHA.

This is not going to quit soon, I'm afraid.

Weeeellllllll,
You've almost got it.
The ORIGINAL system was a Com-Net/Ericsson/GE
EDACS (Enhanced Digital Access Communications System).
Sky Harbor Airport runs the same type.
SRP also?
AND, Ericsson was bidding an upgrade to the existing system.

Walter,

Do you have information that PCSD is going out for bids on a replacement system for the current EFJohnson MultiNet?

No. Current information is that the situation is improving.

What I meant was, that when the bid was put out, EFJ bid
a NEW system, while Ericsson bid an UPGRADE to the
existing system.

From: Wayne Cummings
Topic: 774 Message: 796

Thanks Walter,

There is talk of something happen with the PCSD system. Just what that something is, is not known. I hope there will be a change to a "monitorable" system for us in the future. The EFJ system although technically sound is in use with inferior handheld radios. They are difficult to operate outside of just normal one or two channel operation and turning them on / off. Have you seen the matrix that was designed laying out the talkgroups?

I was involved in recent talks with reps from RCC Consultants (they did the famous Portland 800mhz system) and the City of Tucson in reference to a new digital 800mhz system planned for the future that will provide communications for all city agencies. This is very early information but I truely believe it is going to be a done deal. No timelines available yet. I would be interested in hearing about any 800mhz system failures (analog or digital) that is being experienced and reported by other municipalities similiar to Tucson.

Wayne

797. Unlicensed 900Mhz systems update

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-12 04:26:18 UTC
From: N7DJR@hotmail.com
Topic: 797 Message: 797

The three systems I reported in the past have had some changes made.There has been some frequency switching and adding to all three systems the new frequencies are listed below.
System 1-Tim & Bolt Bus system (Tempe)
935.0500
935.0375
937.0125
937.0250
937.0375
937.0500
937.0875

System 2-Heavy use
935.0625
935.0750
935.5250
935.5375
936.5125
938.5125
938.5375

System 3
935.6000
935.6125
935.6250
936.6125
938.5875
938.6000
938.6250

798. Mesa Fire Radio Channels Missing??

My sources say that they finally got the 2 switches to talk and work
together.
This was the first system the EFJ put in that required more than 1
switch.

I hope there will be a change to a
> "monitorable"
> system for us in the future.

Don't hold your breath.

The EFJ system although technically
> sound is in
> use with inferior handheld radios.

I've heard that from users of other EFJ systems.

They are difficult to operate
> outside of
> just normal one or two channel operation and turning them on / off.

> similiar to Tucson.

There are several mail lists that talk about that on eGroups. SmartNet,
800 Band, Project 25 and TrunkingForum are the ones I know about.
Be sure to look in the archives for those groups. A number of reports
of those type incidents are in there. Look for references to Orange
County.

Tempe Fire is Dispatched by the City of Phoenix on 154.190 and they usually respond on Ch7 154.145 . Tempe PD is on a Motorola Type II trunked system, need all of the frequencies in your trunk tracker for that to work. As for the Airport freq's maybe one of the plane buffs can help you out, as I don't monitor aircraft.

Hey!

Here are the Phoenix Sky Harbor busy frequencies:

Phoenix North Tower - 118.700
Phoenix South Tower - 120.900
Phoenix North Ground - 119.750
Phoenix South Ground - 132.55
Phoenix Final Approach - 126.600
Phoenix North Low Approach (mostly Cessnas and private aircraft)- 120.700
Phoenix South Low Approach (mostly Cessnas and private aircraft) - 123.700

There are many other frequencies for KPHX (Phoenix Sky Harbor International Airport). Visit www.airnav.com and click the Airport Information button, then type in "PHX" and you should get more information about Phoenix than you ever imagined!

803. Town of Gilbert & Mesa Fire Dept.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-14 02:56:15 UTC
From: gb521@aol.com
Topic: 803 Message: 803

Question:

I have each of the Mesa Fire channels (from Dan's latest edition of the Scanner Book) programmed in my scanner, and for the past year have been able to hear all the Mesa traffic.

Recently, however, they seem to have made a change. While I still hear fire calls through the various channels, they say "respond on Fire Channel # 3." Then I hear nothing after that. Does anyone know the frequency for the "Channel 3" they are referring to, or any information about this change??

Also, what are the best frequencies to pick up Town of Gilbert Police??

Thanks.

Mesa Fire's Ch3 is still on 153.950 as in the book. You are correct, however, in that since the last book was published Mesa has begun to use Ch3 (153.950) as a routine tactical channel. It used to be that routine calls were run on Ch1, and 2-1's and greater (large incidents) were on Ch2 or Ch3. Now all incidents are still dispatched on Ch1, but units respond on Ch3 if it is a routine call (minor medical, single unit responses, etc.) and Ch2 if it is a call with a full assignment on it.

Gilbert PD uses 800 MHz Trunked radios. Their talkgroups are found under "Gilbert Police Department" in the book. Their talkgroups are actually on the Chandler PD system, though, so you'll want to get the actual frequencies under Chandler PD, as it says in the Gilbert PD portion of the book.

From: Marc C
Topic: 810 Message: 810

Hi All,

Well, it's State Fair time, and I was wondering if anyone know what the active freq's were.

I remember last year, I was listening to DPS Statewide (460.225) and didn't hear much of anything at all. Have they changed what freq they use for that?

I guess there's always 453.250, but I don't think that's where all the action is.

Have a good one...

Marc

Another recent change to the Mesa & Gilbert FD's is the use of the terms "immediate" and "delayed" when they arrive on scene and evaluate patients. Can anyone tell me what these terms mean and how they decide who gets what?

They come from the newly adopted S.T.A.R.T. triage protocols. Immediate is a level 1/priority 1 injury, delayed is a level 2 injury, minor is a level 3 , and dead/dying is a level 4 injury. S. T. A. R. T. stands for simple triage and rapid treatment. the protocol has been adopted pretty much statewide.

Kevin

Immediate and delayed are similiar to the terms Priority 1 or Level 1 and
Priority 2 and level 2.
The big change with the new terms is that if you go directly by the book
there is no more Level 1 by mechanism.
As the old addage goes it's hard to teach an old dog new tricks, therefore
many folks out there will still say
"Immediate by mechanism".

With the new system there is essentially two types of patient classifications

IMMEDIATE: Used to describe what we all know as a Level 1 by Injury
Delayed: Anything that is not what we use to call a Level 1 by Injury.

This same system of triage has been used with great success in some large
cities around the country (including Los Angeles) and has worked out great.

Phoenix FD and all other agencies have also made this switch, its just a
matter of training everyone to use the same new vocabulary.

Mike

DPS is using 460.225 with an "odd" PL (151.4).
The repeater is inside the radio shop next to Headquarters, with a
directional antenna pointed at the fairgrounds.

Veteran's Memorial Coliseum uses 453.250 and their repeater
is in the attic of the coliseum. Low power and a "no-gain" antenna.

Also, listen to the DPS Explorer post on FRS channel 10.

Just remember that all the above are short range communications.

Walter Howard
TeleComm Supervisor
Arizona Dept. of Public Safety
"Courteous Vigilance"
All opinions expressed are personal, NOT THE DEPARTMENT'S!

P.S Almost forgot, try the MURS (Multiple Use Radio System) channels.
151.820, 151.880, 151.940, 154.570, 154.600. These are the radios sold by

Home Depot, Staples, etc. for jobsite communications (and are now usable
by all without a license).

815. Unusual State Fair Freq

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-18 00:44:39 UTC
From: Tom Kelley
Topic: 815 Message: 815

Hello All

Last year, I surveyed the fair with my Scout on two separate days.
I picked up a number of oddball freqs which I believe, were wireless
microphones.
Anyway, I picked up one at 786 MHz -- which is in the UHF TV band. Got a lot
of activity on that one. I wonder if it was a wireless microphone? Can't
tune that one in with my Bearcat anyway.

Going back again this weekend maybe -- will do another survey for sure.

821. Monthly Scanner Meeting in Phoenix

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-10-26 23:24:48 UTC
From: Dan Rollman
Topic: 821 Message: 821

Hey guys,

This Saturday, October 28th, is the informal monthly radio scanner dinner meeting hosted by Incident Command Page (Arizona's scanner club). You need not be an ICP member, or even have any interest in ICP, to attend. All local scanner hobbyists are welcome to attend. We meet at 6pm at the Fudruckers Restaurant at A51 & Highland. We're usually there until at least 8pm. This is just an informal opportunity to grab some food and hang out and chat with other scanner hobbyists. We enjoyed seeing several non-ICP members at the meeting last month and hope more local scanner listeners will attend. See www.incidentcommandpage.com for more info and a map.

Dan

822. Train collision near Flagstaff @ 6:30 PM MST

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-01 01:53:51 UTC
From: Temp Berdan
Topic: 822 Message: 822

Bellemont, AZ 10/31/00
A BNSF freight train has had a collision and at least one boxcar is burning.

It is known that it is a possible hazmat event and responding emergency equipment is pulling back and evacuations are being done 0.5 miles in all directions, until the severity of the event can be determined by officials.

It is unknown what the train has collided with, but is known that the signals were giving a red light prior to the event, possible signaling a broken rail.

Best freq: 160.255 BNSF maint. personnel, who have been called out from a wide area.

155.835 is also active and stating that all traffic coming off of I-40 (adjacent to tracks).

it is also indicated that I-40 in both directions will be closed.

Breaking news at this time.

823. FW: [ArizonaScanner] Train collision near Flagstaff @ 6:30 PM MST

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-01 02:11:50 UTC
From: tempii@earthlink.net
Topic: 823 Message: 823

07:11 P.M. Update: Update: Ammonia sulfate is supposed to be the agent burning.

Serious consideration is being given to evacuating entire town of Bellemont, which is west of Flagstaff approx. 20o miles.

Complicating the operation is the seasons first snowstorm which passed through the area yesterday and today. Temp. is currently 26F.

I-40 westbound traffic will probably be redirected southward to I-17 (the main road to PHX) and Eastbound traffic will most likely routed to HWY 89, which is a two lane highway to Cottonwood.

More later.

Temp,
This sounds like a bad one, from what we have found out, 2 BNSF freight trains collided at Bellmont. We haven't heard any additional information on injuries or fire involvement. Some other frequencies to monitor for this incident are Coconino County SO 155.490,
Navajo Army FD 165.0875, BNSF 160.935 160.260 160.335.

Update 8:14 PM:
I-40 traffic is being re-routed as follows:
Eastbound: Ashfork at HWY 89 (where they go from there is unk.
Westbound: Hwy 180 North to Hwy 64 South and back to I-40 near Williams.

Local officials reporting that boxcar fire is burning very near tank cars loaded with toxic chemicals.
"That is the problem".

CP now at Bellemont truckstop.

155.835 has good information.

Fox TV NX, PHX and KAFF radio, Flagstaff, reporting that one train has rearended another and that 12,000 gallons of diesel fuel is burning.

The concern is that there are tank cars loaded with "deadly chemicals" close by.

Navajo Army Depot evacuated and area around the wreck is sparsely populated,.

The local officials are planning to house those evacuated at a local elementary school.... if they can find the principal to open it up.

At least one injury has been confirmed by BNSF, and the was mention of a possible 187 earlier.

Tune in to local 10 PM NX for more details.

Subject: Re: New M.U.R.S. Unlicensed VHF Radio Service starts
November
13.

The section below that I find most interesting is 95.1303(b),where
operation aboard an aircraft is prohibited. I am the crew chief,and a
student pilot,for a hot air balloon crew here in the Phoenix,area. I
know of at least 5 crews,only 2 of whom I have found licenses
for,that use at least 4 frequencies in this range,(151.625 MHz,
151.805 MHz,151.895 MHz,and 151.955 MHz),for their air-ground
communications. (We still use 27 Mhz.) It isn't going to be long
before other balloonists around the country find out about MURS,and
start using these radios for the same purpose. And since some of the
crews are using mobile radios in their chase vehicles,with 5/8 wave
whips, it's almost guaranteed that they aren't operating at 2 watts
ERP.
I wonder how (if.....) the FCC is going to enforce the provisions of
the rules that prohibit this type of use? The users are already
there. Just because I haven't found any balloon crews who were
already using the frequencies that are now assigned to MURS, doesn't
mean there aren't any,either here in the Phoenix area,or elsewhere.
It's going to be interesting to watch these channels around the
launch site on the weekends. I wonder how long it'll take for crews
to start showing up on these channels?

Sincerly,John H. Guetherman
KB7MIB/KAE7927/KAZ7FA

(I did some monitoring. 154.600 is definately being used by a local
balloon crew. I think 154.570 is also,but they weren't quite within
range to hear clearly. I actually saw the chase crew using the
radio,while hearing her on 154.600.)

--- In 800band@egroups.com, "Harry Marnell" marnells@s... wrote:
The rules for the new Multi Use Radio Service (MURS), as shown
below,
will go into effect on November 13, 2000.

95.401 (CB Rule 1) What are the Citizens Band Radio Services?

(e) The Multi-Use Radio Service (MURS)--a private, two-way,
short-distance voice, data or image communications service for
personal orbusiness activities of the general public.The rules for
this service are contained in subpart J of this part.

95.632 MURS transmitter frequencies.

(a) The MURS transmitter channel frequencies are 151.820 MHz, 151.880 MHz, 151.940 MHz, 154.570 MHz, 154.600 MHz.

95.639 Maximum transmitter power.

(h) No MURS unit, under any condition of modulation, shall exceed 2 W effective radiated power (ERP).

95.649 Power capability

No CB, R/C, LPRS, FRS, MICS, MURS or WMTS unit shall incorporate provisions for increasing its transmitter power to any level in excess of the limits specified in 95.639.

95.651 Crystal control required

All transmitters used in the Personal Radio Services must be crystal controlled, except an R/C station that transmits in the 26-27 MHz frequency band, a FRS unit, a LPRS unit, a MURS unit, a MICS transmitter, or a WMTS unit.

95.1303 Authorized locations.

(a) MURS operation is authorized:

(b) MURS operation is not authorized aboard aircraft in flight.

95.1309 Channel use policy.

(a) The channels authorized to MURS systems by this part are available on a shared basis only and will not be assigned for the exclusive use of any entity.

(b) Those using MURS transmitters must cooperate in the selection and use of channels in order to reduce interference and make the most effective use of authorized facilities. Channels must be selected in an effort to avoid interference to other MURS transmissions.

A few notes more about the frequencies I sent earlier. All of the 100-395mhz frequencies should be "AM" and the 400mhz frequencies are "FM".

413.275mhz is used by the DMAFB police. It is currently very active getting ready for the show. It is also the primary frequency for police actions on the base.

John

Thanks, Flano for the T-Birds airshow frequencies. Most of these are already programmed into my RS PRO-60 scanner for use at airshows at USAF CONUS bases, and for those who are unaware, the frequencies in the 413 Mhz band are trunked Federally assigned for USAF use. I have been using these T-Bird, and USAF base frequencies for my airshow scanning for years, and have found them quite helpful in understanding what the PA announcer doesn't tell you, or the other USAF organizations won't and don't tell you. Scanning at airshows is not limited to air to air, or air to ground comms, I have found many valuable comms on Navy freqs(like the Blue Angels) Civil Air Patrol(CAP), civilian air comm freqs(for general aviation demos), itinerant freqs(for civilian ground units) Family radio service freqs (spectators and other general uses),Ham (144/440 Mhz) and local Law enforcement(traffic in/out of base entrances and surrounding streets). On-base USAF units like LE, SPs, CE, Fire/Rescue, Hospital, Command Post, and other units involved in the airshow can be a great source of info too. I have found that if you are discreet, and keep what you hear to yourself, generally you will have no problems. The AM Air to Air comms from the Thunderbirds eminating from my scanner have always drawn questions and curious listeners, during TBird demonstrations. It also makes great commentary for your video tape as you watch it later at home. AM Military aviation band capability is rare now except in higher priced scanners, but it is still an interesting way to watch and listen to an airshow.

73's to all,

BD

835. Practice for DMAFB A&A Day - 3 Nov 2000

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-04 02:07:33 UTC
From: FLANO
Topic: 835 Message: 835

Hey all,

I traded in some well-deserved comp time to go out to the base and check out the practice for the weekend's show. I was able to make a few WAV file recordings on my laptop. I'll see about getting them posted to the file section for the group.

Here is a little review of today's activity (03 Nov 2000):

- The Lead Thunderbird, Boss, hit a very large bird with the top of his canopy while in the diamond formation. He remained cool thru the whole event. After checking to be sure that the plane did not ingest the bird, and there were no structure problems, he landed. The Boss is a character.

- Thunderbird-6 developed a major problem with a number of electrical systems. He landed safely. This resulted in 143.85 being active about Thunderbird-6.

- An F-117, callsign Stealth-81, declared an inflight emergency due to a canopy unsafe light. He landed ok. This got a reaction from Police on 413.275, Fire/Crash on 173.5875, and Mock on 413.15

- Air Boss is operating on the following frequencies: 121.8, 127.15, 275.8, and 359.3, all AM. 121.8 is receiving a lot of interference from radios being used by ground personnel.

- Thunderbird Control (Ground) is active on 413.025. Control calls out what the Crew Chiefs are doing to prep the Thunderbids. They were also very active during both in-flight emergencies.

- F-15, callsign Eagle-01, did the first practice.

- Thunderbird Control active on 141.85

- 118.85 and 253.50 (AM) DMAFB - Tower.

- Thunderbirds were involved with some re-enlistments today.

- A-10 Demo on 127.15, "Pickles" is the cue to set-off the pyrotechnics. He calls...ready, ready, pickles. So set your cameras. He made three "attacks".

- According to Air Boss, about 2000 in attencdance, including Make-A-Wish kids.

- Prior to show-start, Thunderbird-Control with Air-Boss discussing upcoming show on 121.8

- After Crew Chiefs come down ladder, switch to 322.95 for the timing by the pilots, canopies, engines, etc.

- Active on 141.85 for roll-out, take-off, and show. This was mainly used by the 4-ship formation. 322.95 was mainly used by the two-ship formation (5 & 6).

- 148.55 was also active, but I didn't wait to find out with what. This is one of the Thunderbirds frequencies from the past for maintenance. It was active about the same time as 6's power failure.

- Callsigns: (callsigns in parenthesis weren't clear)
Centurion-55 Awacs
Dog-2 Jet Trainer
Pinion-69 U-2

Wayne :)

Thanks for the extra frequencies.

I thought that I would have a really good day today, since I had done my homework and had the frequencies for the main show. As the wise man once said, check and re-check your equipment.

I had my lap-top in my truck ready to record the signal from my PRO-2006 to capture the Thunderbird Show frequencies. I left it all day long unattended and was eagerly anticipating the resulting WAV files. I got back to the truck to find only the first seven seconds of static that I had recorded to test the reception. It seems that the input wire to the lap-top moved and didn't keep a solid connection. No signals made it to the lap-top :<

I figured, no problem, since I had my PRO-91 output going to my video camera, I'll at least catch some of the simultaneous radio transmissions and the flight activity. Yep, this one worked fine last night when I checked it. Didn't check it out today. I should have. I have this wonderful "woomping" sound but no audio. Strike 2!

From everything I heard on the portable, the frequencies were the same as Friday. Anyone hear the Thunderbirds on different frequencies?

Thanks,
John

Yep. It's been there several weeks,actually. I had mentioned intermitant useage of a couple of channels about two months ago. A couple of deputies using simplex in District 3,or possibly the northern area of District 2. (I'm at 91st and Peoria.) Guess they hadn't given up their UHF radios yet,or had their own personal radios.

You mean other than the fact that it won't work at the lakes and a few
other places? I hear Ch8 being used all of the time since none of the other
PD or Medical helo's have digital capabilities :-)

Salt River FD is dispatched on 453.725 (they share the channel with PD) and
their response and tac channel is 453.575. Hope this helps.

MCSO has retained, at least for a while, the two old main channels, 460.050 (old ch 1, West) and 460.150 (old ch 3, East) and uses them (a) for times when the 800-MHz stuff doesn't get thru and (b) those who don't have 800 MHz radios.
Some examples of this are other-agency helicopters (Mesa Air, Phoenix Firebird, DPS Ranger), some of our fixed wing aircraft, other agencies units who want/need to come up on our frequencies, and posse persons who bought UHF radios but who can't bite off the $4500 pricetag of an 800-MHz portable.

Channel 8 Search (159.090) will remain for use as an alternate channel for Lake Patrol units, Search and Rescue, etc.
This VHF channel has different propagation than the UHF and 800-MHz radios, but even it has a trouble in some of the nooks and crannies of the 9200 square miles in this county.

All of these channels are monitored by MCSO dispatchers. We kick out hot calls on them and we respond to units who call us on these channels. Frequently, the main channels are simulcast with their trunking counterparts if a dispatcher knows that units are active on the conventional channels. On some occasions, we even patch with a two-way connection between a trunking talk group and one of the conventional channels so that officers on each can hear each other.

And yes, you might hear some car-to-car stuff on the conventional channels -- because to use car-to-car on the trunking system, deputies have to inform the dispatcher that they're switching channels (talkgroups). Since a lot of the cars still have the UHF radios in them, the deputies find it easier to use the second radio for quick car-to-car comm while continuing to monitor their main channel, and they do so in "direct" mode, i.e. simplex on the repeater output frequency.

Okay,thanks for the info,Dan. So,we need to keep a listen on these channels still,as they could be of some use to us. I'm still curious as to why there is a constant "open-mike" with PL tone,on UHF Channel 1? That would seem to defeat the purpose of simulcasting UHF and 800,wouldn't it?

I have no idea where the open carrier with PL tone came from ... I don't remember hearing it nor have I heard anybody talking about it ... perhaps it was a direct signal on the repeater's output frequency that you were hearing - the result of somebody sitting on his microphone with the radio set for direct (simplex) mode. It would only be heard in the vicinity of the transmitter and would not be heard by the dispatcher (one of the things we lost in the revamped radio setup is the ability to listen at the consoles to the repeater output frequencies of the old radio channels). If the channel was patched, this kind of a signal would not trigger the cross patch either.

Subject: [ArizonaScanner] Re: Old MCSO West freq.

Okay,thanks for the info,Dan. So,we need to keep a listen on these channels still,as they could be of some use to us. I'm still curious as to why there is a constant "open-mike" with PL tone,on UHF Channel 1? That would seem to defeat the purpose of simulcasting UHF and 800,wouldn't it?

John H. Guetherman
KB7MIB/KAE7927/KAZ7FA

--- In ArizonaScanner@egroups.com, "Danz, Dan" <ddanz@p...> wrote:
MCSO has retained, at least for a while, the two old main channels, 460.050 (old ch 1, West) and 460.150 (old ch 3, East) and uses them (a) for times when the 800-MHz stuff doesn't get thru and (b) those who don'thave 800 MHz radios.

Some examples of this are other-agency helicopters (Mesa Air, Phoenix Firebird, DPS Ranger), some of our fixed wing aircraft, other agencies units who want/need to come up on our frequencies, and posse persons who bought UHF radios but who can't bite off the $4500 pricetag of an 800-MHz portable.

Channel 8 Search (159.090) will remain for use as an alternate
channel for Lake Patrol units, Search and Rescue, etc.

This VHF channel has different propagation than the UHF and 800-MHz
radios, but even it has a trouble in some of the nooks and crannies
of the 9200 square miles in this county.

All of these channels are monitored by MCSO dispatchers. We kick
out hot calls on them and we respond to units who call us on these
channels.

Frequently, the main channels are simulcast with their trunking
counterparts if a dispatcher knows that units are active on the
conventional channels.

On some occasions, we even patch with a two-way connection between a
trunking talk group and one of the conventional channels so that
officers on each can hear each other.

And yes, you might hear some car-to-car stuff on the conventional
channels -- because to use car-to-car on the trunking system,
deputies have to inform the dispatcher that they're switching
channels (talkgroups).

Since a lot of the cars still have the UHF radios in them, the
deputies find it easier to use the second radio for quick car-to-car
comm while continuing to monitor their main channel, and they do so
in "direct" mode, i.e. simplex on the repeater output frequency.

L. W. "Dan" Danz, TCO
Maricopa County Sheriff's Office (MCSO)

Thanks for the info Dan. I just checked today at lunch and the open carrier is still there (Tempe area and East Valley)on the old Ch1. There was an article in yesterdays AZ Republic (page A2 I think) about how many municipalities are less than impressed with their new digital systems. What do you hear from the rank and file at MCSO? Are the users happy with the new radios?
Carl

From: Temp Berdan
Topic: 854 Message: 854

Hi all,
If you go up to Flag these days, suggest you plug in the following freqs. for a blow by blow rundown (from the snowplow drivers) on cars and big rigs sliding of I-17 and I-40 and St. Hwy 89:
156.105 I-40; I-17; Hwy 89A (Oak Creek Canyon area)
156.220 Hwy 89 and other major state hwys. in Yavapai County.

Lottsa interesting action today, including snowplow getting stuck in ditch, as well as multiple slow speed crashes as they slide around the freeways.
getting better now, as the order to close "chains required" signs has just been given.

From: Temp Berdan
Topic: 856 Message: 856

As "townies" continue to slide off of an icy I-17, a medi-chopper
responds to one accident and lands on freeway.
All victims deemed minor injuries, so chopper tries to restart.
No go.
Un 'id' chopper has been parked in fast lane, near Mogollon Rim for
several hours now, while they get a chopper tow.

Meanwhile more cars/BIG rigs slide off of highway closer to Flagstaff.

Sequence of events: Snow; thaw; wet; new patch freezes in problem areas.
Cinder trucks trying to keep up.

Notsogood. ;)

861. International Space Station - 143.625mhz

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-18 16:37:28 UTC
From: FLANO
Topic: 861 Message: 861

Has anyone in Arizona heard this frequency active yet? I've been trying for over a week and haven't heard a thing. I am tracking the space station, and I know when it is overhead, but no luck so far.

We will be getting the opportunity to hear them today, 18 November. It will pass between the east of San Francisco, along to the southwest of Phoenix and Tucson as it makes its way over Mexico.

The times are approximate, so be sure to listen before and after the times - about 11:32am through 11:42am

A good site to know where it is located all the time can be found at the following site:

http://spaceflight.nasa.gov/realdata/tracking/index.html

Let me know if you hear them, oh yeah, they'll more than likely be speaking in Russian. The frequency is NFM on 143.625mhz.

Thanks,
John

Yup, hear it loud and clear in SEZ.
using BC9000, Diamond discone with Grove Pre-5 preamp.
Mostly Russian.
I have a counter on BC 9K and it shows a lot of hits are happening when I'm not here.
Have you put ISS freq. as your #1 priority channel ??

Temp :)

I'm using a PRO-2006 with the standard telescope mounted antenna. I
have been monitoring this frequency only. I've been trying to record
the sound on my computer using the Sound Recorder software.

As I write this, the ISS is aproaching northwestern U.S. The pass
won't be close this time, but I'll be listening.

Thanks,
John

Date: 2000-11-18 19:05:56 UTC
From: FLANO
Topic: 861 Message: 864

Well, now that the ISS passed very close by, I've had an opportunity to figure out why I haven't heard them. My Pro-2006 never even heard a peep. My daughter stood outside, to the west of my home, and used my handheld Pro-91. She began hearing them very faintly in the background once it broke the horizon in relation to my home location. She was very excited that she got to hear the space station live before me :)

Unfortunately, by the time I got my laptop oustide and the Pro-2006 on the frequency, it was too late. Looks like I need to invest in an outside antenna if I want to listen to these guys. I didn't have the need for one before, since I can listen to all the normal radio stuff without one.

It looks like it'll be a couple of days before I get another great chance like today - a little bit of time:)

By the way, I understand Russian to a certain degree and would love to know if anyone recorded these guys and would be willing to send the recording to me. I will gladly translate as much of the recording as possible.

Thanks,
John

866. RE: [ArizonaScanner] International Space Station - 143.625mhz

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-18 20:20:12 UTC
From: Temp Berdan
Topic: 861 Message: 866

John,
Sorry, but I don't do any recording of transmissions.

Definitely get an outside scanner antenna.... I just got a Grove Scantenna, which has always rec'd good reviews. This will be mounted in the house we are building here, sometime late next year. That antenna will have an almost clear shot at Mingus Mtn. repeater site, so I am hopeful that my scanning will be improved over Prescott way..... and I should have my BC 780 by that time to get the trunked stuff over your way.
if you haven't done any business with Grove, give them a shot. I've dealt there for over 15 years and am a very satisfied customer:
http://www.grove-ent.com/ .

Good scanning to you all.

Temp

Temp :)

I'm using a PRO-2006 with the standard telescope mounted antenna. I have been monitoring this frequency only. I've been trying to record the sound on my computer using the Sound Recorder software.

As I write this, the ISS is aproaching northwestern U.S. The pass won't be close this time, but I'll be listening.

Thanks,
John

867. Data on 455.0250

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-19 20:45:17 UTC
From: tcinv@earthlink.net
Topic: 867 Message: 867

Has anyone heard Data transmission on 455.0250 in Tucson, and if so,
what type is it (RTTY, SITOR?) Does anyone know who it belongs to?
Please educate me on this curious "noise"

Thanx, WJS

868. Nice Pass Of Iss Over Tucson

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-21 09:33:03 UTC
From: Nasa Spaceflight
Topic: 868 Message: 868

Iss was over Arizona at 02:10 this am. Great pass over 10 min +. Using discone and Rf Concepts pre amp..Acc was at 02:04
and los was at 02:17am. U.S had them for a few min's and then went to Russ ground station...They have Windows prob's on ther
laptops keeping them from getting pic's and video to the down link....For all that do not know the freq is 143.625 Mhz NFM...
Next good pass will be about 04:00am....Look for them at www.spaceflight.nasa.gov....

From: FLANO
Topic: 869 Message: 869

Kelly :)

I missed that 2 o'clock in the morning pass....a little too early for me.....

To the rest of the crew :)

There is a really nice pass coming up for today in about an hour and half.

Here are the times for Tucson and Phoenix areas:

Tucson
The ISS breaks the horizon about 10:08.
It will be at it's closest to Tucson about 10:13:11.
It will fall below the horizon at about 10:18.

Phoenix
The ISS breaks the horizon about 10:07.
It will be at it's closest to Phoenix about 10:12:40.
It will fall below the horizon at about 10:17.

This one will be really close to both cities, closest to Phoenix.
Frequency is 143.625mhz NFM

Good luck,
John

Michael

I was outside with my PRO-91 and my PRO-2006 and heard very little.
The reception was horrible for the location, it was less than 300 miles
away ..... :) My daughter and I heard a couple of isolated parts of
transmissions clearly, but not enough.

This is going to get the best of me until I hear it crystal clear.

And so it goes....

874. pro-92 battery charging options?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-11-22 16:37:22 UTC
From: Jerry Riechert
Topic: 874 Message: 874

What are the options for using rechargable batteries with the pro-92? On their web site they show a battery holder for rechargable batteries. The latest sale flyer shows a special- rechargable battery pack and wall-wart charger. I would like to use rechargable AAs and my fast charger. Is this possible?

ISS over Mesa this morning herd activity on 143.625 at 09:14 with an HT from inside the house then I ran out side and picked up the signal really good for about 5 mins. Strong carrier signal with background noise sounds like someone esle in the station or the other station they were talking too. I had three radios on the frequency placed at different locations inside and all were jumping with activity at 09:14 this morning if I only had an outside antenna?
I live near Dobson and W.Main in Mesa

Date: 2000-11-22 16:54:29 UTC
From: FLANO
Topic: 877 Message: 877

Hello All :)

Finally heard them chattering. I hooked my PRO-91 up to my glass mounted antenna in my truck. Temp was right, crystal clear :) It started out a little garbled but it got better. This was at a relatively low pass for me at an altitude of about 27, as described by the STS-Plus software. I didn't expect to hear much, if anything.

They spent the majority of this pass discussing when they will be in comms with each other again. The two cosmonauts were arguing with the person that they were talking with whether the comms will be at 17:27 or during the 18:00 or 20:00 hours. The times are probably UTC. They'll be over the Sea of Japan near Sapporo Island at 17:27. The ground control can be heard via an open speaker in the background of the cosmonauts.

Now the next effort is to hear the astronaut....I can sleep now.

Hi all :)

I created a Thunderbirds folder and uploaded the show that the USAF Thunderbirds did at Davis-Monthan AFB on 3 November 2000. It is broken down into seven different files, so be sure to read the txt file found in the directory. Some of the files are large, but worth it.

http://www.egroups.com/files/ArizonaScanner/Thunderbirds/

Enjoy!

John

OK kids.... there will be another pass over the Az/Ca border
(orbit #13) later this morning (aprox same time as yesterday
(0900-0930).... the ISS just began orbit #11 (07:38)...
Here's a little hint for those of you who may not know this....
rember the doppler effect, as the spacestation approaches
your location the signal will be stronger 5khz above center
freq, overhead the signal will be on freq, and as the station
goes away, the signal will become stronger 5khz below the
freq. I keep 143.620/.625/.630 programmed in to hear them
asap.
Enjoy the Holiday.... and Good Luck with the listening!

In answer to both questions, there is a scanner group located in the Phoenix area. Incident Command Page of Arizona, you can check out our website at www.incidentcommandpage.com and as for the scanner book, Radio Shack sells the Police Call book but personally I prefer the Southwest Frequency Directory which can be found at www.scannerstuff.com enjoy.

Incident Command Page (Arizona's scanner "club") and
Scannerstuff (publisher of the Southwest Frequency
Directory) will be set-up at the hamfest as well, starting
around 6:30. Stop by and say hi, and also see a brand new
product from Scannerstuff!

889. SZ digital trunk tracking scanners, Motorola Astro

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-01 18:42:16 UTC
From: Steven Gibbs - SHERIFFX
Topic: 889 Message: 889

Does anyone have information on when they might have a Trunk Tracker Scanner
that
will do SZ Motorola Astro format out on the market? Am trying to do some
research and cant find
any info form Uniden, Radio Shack...

890. RE: [ArizonaScanner] SZ digital trunk tracking scanners, Motorola Astro

From: Andy Clark
Topic: 889 Message: 890

Right now, there is no solid information on when a digital trunktracker will be out. There have only been rumors of an add-on board for the Uniden BC780XLT.

Hi Joe!
Thanks for the interest. The new product is the Southwest Frequency Directory, 6th Edition (newest) on CD / Adobe Acrobat Format. Search, View, Print from SWFD-6, right on your PC! More to follow in the next few days. The retail price is expected to be about $30, and as with the release of the book back in April, direct internet-orders to Scannerstuff will be accepted in a few days and will result in advance-order customers packages going out the same day as the initial round of shipments to stores across the West.

Keep an eye on the ArizonaScanner list, as well as the Scannerstuff website (www.scannerstuff.com) for further information in the next week or so. An entirely new website is coming, including information on this new product, SWFD for the PC!

894. new user- pro92 NW Phoenix area programming

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-04 18:24:50 UTC
From: Jerry Riechert
Topic: 894 Message: 894

I just bought a pro92 and ordered the programming software from Radio Shack. This is my first scanner, other than plugging in a few freqs in my HAM handheld, and would like to get it programmed right the first time (yeah I know, wishful thinking). To start I'm interested in police, fire, air rescue, etc. Does anyone have a suggested programming layout that they're willing to share? Maybe a programming file that I can use? I know the software's web site has a file for Phoenix but until I get the software I can't tell what's in it. Any general programming suggestions?

Also, the scanner came with what appears to be a subset of Police Call. Should I consider getting the full Police Call (book or CD)? Are there another books or lists that are better? Can I find all the freqs I'm looking for on the net?

So many questions... Thanks for any help.

One question does come to mind Jerry. Do you know
which version of Pro-92 you have?
I ask this because of the problems I had when attempting
to monitor Glendale P.D. with the original version of the
Pro-92. After you turn your unit on and get the 'welcome'
message, press the #3 key, ...if you plan on
monitoring Glendale you DON'T want to see firmware
version 1.00. There are other bugs that many others
complained about with the 92, ...but, since
purchasing a version 3.25 I haven't experienced any
more problems. I can even program a bank with
Glendale P.D, amateur radio, Phoenix P.D, etc, and
they all get along just fine together. Just thought I'd
clue you in before your 30 return period expired, . .
should you need it. The particular 'bug' I had
first experienced was the 'audio pulsing' associated
with monitoring in the 'closed mode.' Hope this has
helped you. Looks like you have also checked out
the Pro-92 website. Dig back further into the archives
and you'll find all the other good/bad things about this
radio. Liking mine so far anyway, . .73, Dave, kk7re

898. New Scanner Advise?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-05 15:55:34 UTC
From: R. Benne
Topic: 898 Message: 898

Okay, I have to admit it, my current scanner is obsolete. The move to trunking has made it difficult to follow my favorite agencies and I really need to consider a new radio. I'm troubled by the move MCSO made to digital. Is there a scanner currently on the market or anticipated that will also be able to monitor digital trucking systems? I hate to spend the money and find that 30-90 days from now a scanner is available to do that job? Absent that, is the PRO-92 the way to go? Any thoughts/guidence would be appreciated.

Don't think we will be seeing a digital capable scanner very soon, I've heard mixed stories on the Pro92 and personally haven't felt the need to find out if they have gotten any better or not. A suggestion to replace your current out of date scanner, I'd have to say the Uniden 245xlt would be the choice. From what I have seen they have removed the annoying "delay" to enable scanning both trunked and conventional more easily, but its still not perfect. But with what is out on the market now I'd spend the $200 and get the 245xlt.

Digital scanners likely will come, and "add-on" boards by 3rd parties for some of the existing TrunkTracker scanners may come even sooner, but both of these are still some time off. They are not worth planning purchases around yet.

I'd highly recommend the Uniden BC245xlt over the Pro-92. Of course, reasonable hobbyists can disagree, but I come across a lot of them in my business dealing (Scannerstuff owner) and it's the conclusion of most that the Pro-92A and Pro-92B are wonderful "look at these bells and whistles" scanners, but the BC245xlt is a better value and better all-around quality radio. Again, you'll find many happy Pro-92 owners who'll disagree, but that has been my experience.

Also keep in mind, given how easy resale has become with seller's markets like eBay, sinking money into a scanner you may not keep for long is not a total loss. Provided you shop around and get a fair price for your scanner ($195-$215 is good for the BC245), you shouldn't loose more than about 25% reselling it on eBay a year or so after you bought it. Yeah, it's money lost, but it means you can upgrade without writing off the old scanner as a junker. :)

Hello Dan:

Sorry I didn't get a chance to shake your hand at the Mesa meet. Did buy the new directory, however.

Thank you for your reply. I worked as a VERY active reserve deputy with MCSO for 17 years but recently changed my status to Retired Active for a number of reasons. I miss not being able to keep track of my friends as they make their rounds. I note that Uniden is bringing out another scanner, the BC780XLT. Not sure about all the bells and whistles. Looks like a table top and I need a portable but they usually follow shortly after the intro of a new desktop unit.

I appreciate your comments. Looks like the 245's can be had pretty cheaply so will check into it. Any/all other thoughts appreciated. BTW, keep up the good work.

Bob

905. MCSO Mall Patrol

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-07 06:30:38 UTC
From: Marc C
Topic: 905 Message: 905

Hi,

I was just up at Metro Center tonight, and noticed that Mall Patrol was up and running. Guess it slipped my mind, hehe.

Anyway... anyone know if the Mall Patrol ops are on the new digital system or by chance something else?

BTW, I saw a couple of marked patrol cars, a really cool looking Ford Expedition K-9 unit, and one Toyota Corolla (apparently a Posse member).

Happy Holidays and happy monitoring,

Marc

906. Youngtown PD and Miscellaneous

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-07 10:07:05 UTC
From: kb7mib@hotmail.com
Topic: 906 Message: 906

I haven't heard the Youngtown police in quite awhile,so I decided to go looking for them in both the FCC and PerCon websites.

On the FCC website, it shows 453.275 and 458.275 as still being active, under the PW (Public Safety Pool) group, with the callsign of KXQ859. They are licensed for a base, a repeater, and a control station. No mobiles are licensed. I found this info by looking up "Youngtown".

On the PerCon site, I looked under the PW group, with the name "Youngtown", and got 453.975 and 458.975, with the callsign WPPB706.

Then,I decided to cross-reference the callsigns on the other website. I looked up KXQ859 on PerCon, and it came up as being a PL (Local Goverment) license. I looked up WPPB706 on the FCC website, and it came up as a PW license, but with the name "Youngstown". (Notice the "S" in the name.) It was also only licensed as a repeater. No control or mobile stations. I assume it is "technically" illegal to use mobiles when none are licensed.....*grin*

Anyway, now I just have to figure out which frequency-(ies) they're actually using, and whether or not they're using simplex or repeater operation. Anybody know, off-hand?

MCSO is still using UHF channels 1 and 3 for emergency traffic and ATL's, by the way. And I would guess the mall patrols, if on the digital system, are using one or more of the Special Detail channels. Talk Groups 43696, 43728, and/or 43760. Not that you can monitor them anyway, but if you can listen for the digital noise, and it corresponds to a deputy/posse member talking on the radio, there you go.

LifeNet is using a PL of 127.3Hz on 463.200, if anybody needs it. I monitored LifeNet 5 when they responded to a car-pedestrian in Peoria yesterday evening.

Any updates on either Buckeye, Buckeye Valley, or the Ft. McDowell fire departments' radio system's, or integration into Phoenix Alarm? What is the numbering scheme for Ft. McDowell fire?

Any information on how 460.575-465.575 and 460.625-465.625 are used by Phoenix Alarm, and who exactly has the radios for these two channels? I know Sun City holds 2 licenses for 460./465.625 (KOB791 and KVF695) and Phoenix holds 2 licenses,(KOA519 and WNAZ523), for both 460./465.575 and 460./465.625. Phoenix also holds a third license, WNAB745, for 465.575 alone for a control station. I have in my records a PL of 136.5Hz for 460.575, which I acquired while

monitoring at a parade in Phoenix one year several years ago. Don't know what Rural-Metro/Sun City used on 460.625 when they were still affiliated.

Lastly, the frequency of 154.355. It was originally licensed to Daisy Mountain, WNSU697. When they joined Phoenix Alarm, Phoenix got the license WPJD907, and I believe it was originally programmed in their radios as B-3 (Blue Deck 3). According to the SWFD, it's no longer programmed. Was it ever used? Is it still used by Daisy Mountain or Phoenix?

Press Release:
The most trusted scanner information book for hobbyists in the Southwest and Pacific Northwest is now available for your PC
December 6, 2000 -- Scanner radio hobbyists in the Western United States have relied on the Southwest Frequency Directory (SWFD) by Scannerstuff for nearly a decade, but the product this month made a significant step toward becoming even easier to use. Responding to the feedback from its customers, Scannerstuff has released the most current (6th Edition) of SWFD on CD-ROM. Now customers can search, view, and print right from the resource they've relied on for years because of its accuracy and completeness.

SWFD for PC is provided on a CD-ROM as an Adobe Acrobat file in order to make the product as useful and easy to learn as possible. Also included on the CD is a copy of Adobe Acrobat Reader, the software that has become the standard for sharing documents. The document includes all 400+ pages included in the Southwest Frequency Directory 6th Edition (originally released in April, 2000). Like the hardcopy book, the file includes frequencies, radio codes, maps, unit designators, TrunkTracker talkgroups, and more, and covers public safety, government, aircraft, and more.

Yes the MCSO posse's are now out and patroling the malls now.
I talked to a capt.of the foothills posse he told me they are'nt on
the new digital radios yet.He said that sheriff joe wont provide them
with the digital radios and that the posse will have to buy thier own
radios .

You'll find the mall Posse stuff on the analog special detail talk groups, TT 3952 and 3984, and perhaps some chit chat on the analog Talk Around channels. They've been provided specially-programmed 800 MHz analog portables to use, and posse personnel are staffing a radio console in the comm center to monitor and coordinate traffic on these channels.

The sworn/reserve deputies in charge of each mall detail will use their usual portables, which can talk digital or analog, to contact main channel dispatchers using the digital main channel talkgroup for the area for any critical activity. You won't be able to monitor that.

It shouldn't be hard to ID the units -- their callsigns include the mall name !

Youngtown PD has forever been dispatched by the City of Surprise. I heard some grumblings about a year ago that they would be migrating over the to the trunked system.
They might be there.

Hey that sounds like good security, volunteers with no radios :-(But out of the kindness of his heart, Uncle Joe will allow the volunteers to buy radio's costing $3000 + out of their own pockets. Sounds like a rather expensive price just to pay to try and help our your community.

Sorry, I do not have any talkgroup information. In fact, I was only merely suggesting that Youngtown PD may have "disappeared" onto the trunk system that surprise uses. I cant make any guarantees, it was just some rumor that I had once heard was being tossed around.
Youngtown is such a major metropolis, I just can't bear to listen to them, as their radio traffic just jamms up scanners! HA!
I will do some checking and see if I can confirm anything, and will let you know if I do!

Bob,

If you're interested in seeing what the bells and whistles are on the BC-780XLT,you can read the ongoing review in the November and December issues of Monitoring Times in the Scanning Report column. It's supposed to continue next month. Ham Radio Outlet carries the magazine.

There is also a website: http://www.bc780XLT.com but at the present moment,it's just a cover page,with a photo and some basic info. I suppose it'll be expanded eventually to give an in-depth look at the scanner.

As has been mentioned,there are rumors that an add-in board will eventually be made available for the 780,and perhaps others,to allow the reception of digital systems,such as the MCSO's.

John H. Guetherman

--- In ArizonaScanner@egroups.com, "R. Benne" <rbenne@q...> wrote:
Hello Dan:

Sorry I didn't get a chance to shake your hand at the Mesa meet. Did buy the new directory, however.

Thank you for your reply. I worked as a VERY active reserve deputy with MCSO for 17 years but recently changed my status to Retired Active for a number of reasons. I miss not being able to keep track of my friends as they make their rounds. I note that Uniden is bringing out another scanner, the BC780XLT. Not sure about all the bells and whistles. Looks like a table top and I need a portable but they usually follow shortly after the intro of a new desktop unit.

I appreciate your comments. Looks like the 245's can be had pretty cheaply so will check into it. Any/all other thoughts appreciated. BTW, keep up the good work.

Bob

http://www.ci.phoenix.az.us/2000BOND/recomend.html

On 28 Nov 00, the Phoenix City Council gave its approval to present a $753 million bond proposal to Phoenix voters on 13 March 01. The FD will seek $91 million to replace the comm system, build new and replacement stations, build a driver training facility, and jointly fund a police/fire rescue helo. The PD will seek $155 million for replacing comm gear, building new stations, and more.

The 29 Nov 00 edition of the Arizona Republic newspaper had a article titled "Phoenix Puts Digital Radios Up To Voters - Price Tag $90.9 Million". (I am guessing that the $90M is part of the $245 million mentioned above - right?)

I've added a table to the Scannerstuff website that shows the specific settings of each of the pre-programmed settings (like "E1-P4", etc.) This chart will show you how all the "blocks" are set in each pre-programmed setting. That'll allow you to program the settings in your Pro-92 manually.

See www.scannerstuff.com and click the link to the new "guide to trunked system fleet maps".

Subject: [ArizonaScanner] how to enter fleet map in pro92?

I'm trying to enter the Glendale Arizona police freqs in my pro92b. The info I have says it's a Motorola type 1 system with a fleet map of E1P4. The users guide talks about blocks and size codes. how do I convert from one to the other?

And once you've got the right fleet map programmed,Glendale police can be found in Block 3. They use letter designations for their channels,instead of numbers. For example,instead of Ch. 1,they refer to it as Ch. A. Their channels in the Trunktrackers run from 300-1 to 300-16,corresponding to channels A-P. Most of the traffic will be heard on A-E. Only occasionally will you hear anything above channel F. Channel I (300-9) is digitally encrypted, and I've only heard one officer calling another,without a response,on channel N (300-14) once.

I concur with the Glendale overview...it seems the surveillance/undercover stuff is on 6. Ch 1/A is the main channel, 2/B is for running plates, etc., or during some "situations". Haven't heard much on 3/C, 4/D is often car-to-car and I haven't heard anything on 5/E and I didn't know about anything above that.

From: walter.howard@juno.com
Topic: 927 Message: 927

I am trying to run down some interference to the ADJC repeater on South Mountain.

The freq's are 155.850 out, and 154.8450 in.
Yes, that's an old Scottsdale PD dispatch channel pair.

Could anyone that hears traffic that doesn't sound like ADJC on these freq's, send
me a note describing what you heard and the time and date? Especially any names,
locales or other information that might tell me where it's coming from.

Any help is greatly appreciated.

Topic: 926 Message: 928

Yep. From my own monitoring,as I live in Peoria,and have family in Glendale,I used to like to listen to them frequently. (My BC-235 has since been misplaced or stolen.) Here's what I've heard:

Ch. A: Main Dispatch
Ch. B: Information and Secondary Dispatch (if Ch. A is busy with "hot traffic".)
Ch. C: Information
Ch. D: Car-to-Car/Special Event Details (Like the "Glitter and Glow" coming next month.)
Ch. E: General Investigations Detectives
Ch. F: Surveillance Operations
Ch. G: Nothing Heard
Ch. H: Nothing Heard
Ch. I: Encrypted Transmissions
Ch. J: Nothing Heard
Ch. K: Surveillance Operations
Ch. L: Nothing Heard
Ch. M: Nothing Heard
Ch. N: One officer heard calling another,one time. No response.
Ch. O: Nothing Heard
Ch. P: Nothing Heard
Ch. ?: Detectives heard. Talkgroup 100-1. PD radios probably capable of talking on ANY talkgroup,so after hours any channel could be used.

I've also appears that every GFD apparatus has a mobile radio,with at least the PD talkgroups programmed in,for immediate communications between the FD and PD. (I've sat in Battalion 151's vehicle,and peered into a couple of others.) Also,when they are working together on an incident,the PD officer in charge of that incident will identify as "Command",not with his/her regular patrol id. I wouldn't be surprised to see the officer in the second-row seat of the battalion chief's Suburban,co-ordinating with them directly.

I do hesitate some,descibing the channels I've heard the surveillance operations on. I don't want the info getting out to someone who shouldn't have it. I could have stopped at Ch. D or E,and just let everyone who doesn't already know about the other channels find them on their own. But,that's also why I've included them. Most people who use the Trunktrackers will figure out that there are 16 channels allocated to the PD,due to the fleetmap programming,and will find them sooner or later. I'm also of the mind,that although I prefer that normal patrol operations be "in the clear",ie analog,I understand encrypting SWAT/Tactical team,and surveillance/undercover channels. So,if the PD aknowledges that the info is available,then they can encrypt those channels used for that purpose,hopefully

leaving the regular channels open for the public they serve to be kept aware of what's going on in their neighborhood and city.

John.

929. Re: Buckeye Rural & Town of Buckeye FD's

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-14 02:11:01 UTC
From: Charles Simmont
Topic: 929 Message: 929

Someone asked a few days ago about the status the two FD's in the Buckeye area moving to the Phx CAD. Well what I know as of now (which still isn't much) is....

Assistant Chief for the Buckeye Rural Fire District Norman Cooper, Car3211 is also now Battalion 321. The Fire Dist has activated their new freq's from what I can tell. I believe their radio plan will include Phx Fire channels 1-12 and 154.415 as their own tactical channel (Ch13) and 155.805 (Ch14) as the admin channel. Also seems that the Town of Buckeye has finally put a repeater on their frequency 154.980. I can now hear mobile and hand held units without them being in town. This frequency will be used by the Town FD as their tactical channel. I am sure both dept's will utilize each others freq's since they will be responding with each other on calls once dispatched by Phx. I would expect the transition to take place around the beginning of the year, have seen plenty of PhxFD vehicles in town, probably finalizing the deal.

Thats about all I know, if anyone else has heard anything pass it along.

Greetings.

In regards to the Buckeye Valley Fire District's Phoenix conversion plan, here's whats going on....

district and town equipment will be dispatched on Phx 1, and will mostly will be assigned Blue deck 12 as tactical..(rx 154.085) ch blue "13" is the simplex of B12.
ch 14 is the districts admin /training channel (rx 154.415)

Blue 12 is the districts repeater on the tanks

districts ch assignments are..

1-10 Phx fire red channels
11 Gila bend
12-14 as above
15 is the current town ch 154.980
16 weather

the towns scheme is different.

also i don't think 154980 is a repeater, i haven't seen it on FCC searches. too much intermod on it

ambulances are as follows R324 is the full time ALS rig , R321 is a reserve, and R329 is the volunteer rig. the medical extrication truck is now squad 324

the full time town truck is E312

Ill try to assist with any other questions you may have

Regards,

Kevin Wiley
Buckeye Valley Fire District

Kevin,
Thanks for the correct information. Am I wrong in assuming that
the Town will be assigned to their own tactical channel 154.980 since
154.085 is the Fire District's frequency? Also I see the district is
juggling around some of their equipment. So the current Rescue 324 (pickup
with utility bed) will become Squad 324? Rescue's 321, 324, & 329 will all
be Ambulances, don't they have a total of 4 including the odd painted blue
one?

actually we have 4 ambulances plus the 5th on order due in Feb. we normally run only 3 rescues at the most. the district's full time crew R324, may be assisted in the future by a second full time crew R321, but that is part-time as-needed. it is my understanding that the district and the town will mainly use B12, Goodyear will use as needed, and certain district responses may use phx9 as needed for border calls with Goodyear. the 154.980 ch wont be monitored by Phx as far as I understand.

the station packages are up and running in St. 324 and 311 (new town station). District engines will still be 2tone paged on Phx, the rescues will use station alert. all units will have Phx fire Qpagers(alpha pagers).

It is my understanding that the town full time E312 will use station alert, the volunteer/reserves will be 2toned as needed.

Walt.. If it sounds like cops, I'd bet it's TucPD crosstalk. It's 'repeatered' and it'd be similar to me hearing Cochise County from Tucson.

On a side note I want to thank you for your participation on this list. I always look forward to your inputs.

935. Globe-Miami and East Valley frequencies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-15 15:26:29 UTC
From: Thomas Kelley
Topic: 935 Message: 935

Hi All

Sean asked about east Valley and Globe-Miami frequencies.
Robert,(KB7AQD,) and I checked that area, and posted the results on Robert's
List, accessible on: www.azrepeaters.net

In general, most of the receivable traffic came in from South Mountain.
However, Robert did localize PD, Forest Service, and the like, in the
Globe-Miami area.

Hello to everyone. Out here on the West Coast of the Arid Desert State of Zona, our law enforcement public safety agency {Bullhead City} has switched over to using mobile computers {pretty much all of the time} w/very little voice comms anymore. I think that they also use them for report writing & @ end of shift the officer can take the computer into the station and dump all data from his shift into mainframe and releaf shift can start patrol w/an empty mobile sys. My question is: do these systems operate via raido freq's or cellular phone numbers? If they operate via cellular numbers then the annual cost must bee astronomical when you consider we have approx 45 pieces of equipment in the patrol division, several spares {back-ups} and the several located @ the 911 center. If operated via radio freq's, what range would I search for monitoring messages?

Thanking you in advance
Danny McLean

Most all of these systems operate on a 900 mhz trunked system.
I would not even attempt to monitor the transmissions unless you would like to visit the Pokee on federal charges.

It is hightly illegal to attempt to monitor or decode messages sent to MDT's or Alpha Pagers.

Stick to monitoring the voice comms, and stay far far far away from the computer terminals!

Point us in the direction of the law that forbids MDT monitoring.
Pagers are stated directly in the law, but not MDT.

If its what I think it is, it is CDPD, a packetized data system on
cellular frequencies.
The state just awarded a contract to AllTel for this service for
$55/mo/unit for unlimited usage.
Pima county, among others, is also going to this service for their MDC's.

If the agency is doing it right, they have end-end encryption which is
not real easy to break.

AV-8B Harrier II

Primary function: Attack and destroy surface targets under day and night visual conditions.
Manufacturer: McDonnell Douglas
Propulsion: One Rolls Royce F402-RR-406 or F402-RR-408 turbofan engine
Thrust:
F402-RR-406: 21,500 pounds
F402-44-208: 23,400 pounds
Length: 46.3 feet (14.11 meters)
Wing span: 30.3 feet (9.24 meters)
Cruise speed: Subsonic to transonic
Ferry range: 2100 nautical miles (2416.64 miles)
Combat radius:
close air support: 163 nautical miles (187.45 miles) with 30 minutes time on station
interdiction: 454 nautical miles (522.45 miles)
Armament: Seven external store stations, comprising six wing stations for AIM-9 Sidewinder and an assortment of air-to-ground weapons, external fuel tanks and AGM-65 Maverick missiles; one centerline station for DECM pod or air-to-ground ordnance. A GAU-12 25MM six-barrel gun pod can be mounted on the centerline and has a 300 round capacity with a lead computing optical sight system (LCOSS) gunsight.
Crew: 1
Introduction date: 12 January 1985, AV-8BII(Plus) introduced in June 1993
Unit Replacement Cost: $23,700,000

Mission: The mission of the VMA STOVL squadron is to attack and destroy surface and air targets, to escort helicopters, and to conduct other such air operations as may be directed. Specific tasks of the AV-8B HARRIER II include:
- Conduct close air support using conventional and specific weapons.
- Conduct deep air support, to include armed reconnaissance and air interdiction,
using conventional and specific weapons.
- Conduct offensive and defensive antiair warfare. This includes combat air patrol, armed escort missions, and offensive missions against enemy ground-to-air defenses, all within
the capabilities of the aircraft.
- Be able to operate and deliver ordnance at night and to operate under instrument flight conditions.
- Be able to deploy for extended operations employing aerial refueling.

- Be able to deploy to and operate from carriers and other suitable seagoing platforms,
advanced bases, expeditionary airfields, and remote tactical landing sites.

Features: The AV-8B V/STOL strike aircraft was designed to replace the AV-8A and
the A-4M light attack aircraft. The Marine Corps requirement for a V/STOL light
attack force has been well documented since the late 1950's. Combining tactical
mobility, responsiveness, reduced operating cost and basing flexibility, both
afloat and ashore, V/STOL aircraft are particularly well-suited to the special
combat and expeditionary requirements of the Marine Corps. The AV-8BII+ features
the APG-65 Radar common to the F/A-18, as well as all previous systems and
features common to the AV-8BII.

Inventory: 7 squadrons with 20 aircraft each and 1 training squadron with
20 AV-8B and 15 TAV-8B aircraft for a total 175 aircraft.

Background: Operation Desert Storm in 1991 was highlighted by expeditionary
air operations performed by the AV-8B. The Harrier II was the first Marine
Corps tactical strike platform to arrive in theater, and subsequently
operated from various basing postures. Three squadrons, totaling 60 aircraft,
and one six-aircraft detachment operated ashore from an expeditionary
airfield, while one squadron of 20 aircraft operated from a sea platform.
During the ground war, AV-8Bs were based as close as 35 nautical miles
(40.22 miles) from the Kuwait border, making them the most forward deployed
tactical strike aircraft in theater. The AV-8B flew 3,380 sorties for a
total of 4,083 flight hours while maintaining a mission capable rate in
excess of 90%. Average turnaround time during the ground war surge rate
flight operations was 23 minutes.

Michael,

One must keep in mind that "law" is meaningless unless you have tens of thousands of dollars and are willing to risk years in federal prison in order to be a "martyr" for your hobby. :) While such action might be quite noble to enforce certain principles of freedoms to monitor airwaves that enter your property, it is important to keep in mind that "illegal" means (in true practice) anything the U.S. attorney's office and federal district court judges decide is illegal. Law is subject to interpretation. The same ECPA that forbids the monitoring of pagers has been extended in several court cases to include MDT's.

The principle that federal courts have devised in the written case law is called "expectation of privacy". Regardless of the specific communications devices outlined in the ECPA, courts have repeatedly determined that the intent of the ECPA is to extend to all forms of communications their due "expectation of privacy". What this means is that the courts have determined that if the users of a certain type of communication "expect" it to be private, then the ECPA was "inteded" to cover it. These courts have determined that two-way radios do not carry an "expectation of privacy" because most normal people know that they are not private. To the contrary, most users of pagers and MDTs do "expect" that their communications are private and so (unfortunately, in my opinnion), the courts that have been presented with the issue in the past have determined "expectation of privacy" will be the determining factor in these issues.

As such, the letter of the law really doesn't mean all that much.

Feel free to disagree with the courts oppinion, with the U.S. Attorney's office in NYC that brought these cases to light, and with the law itself, as well as with my interpretation of it. However, it was just the suggestion of Mike Todd in his email (and I support Mikes kind-hearted recommendation to you and others), to steer clear of legal issues in communications that can be described as no less than "questionable".

You're certainly free to challenge any legal interpretation you don't like, and to act as you chose. I do think it's nice to see other hobbyists weigh in, though, and let eachother know when something may be "questionable" and to make a decision.

Dan

Point us in the direction of the law that forbids MDT monitoring.
Pagers are stated directly in the law, but not MDT.

It is hightly illegal to attempt to monitor or decode messages sent to
MDT's or Alpha Pagers.

I am sorry if my first post seemed rude.
But, I guess it was feelings projected at the government , and not to
Michael Todd, or you guys.
Dan your messages is well written. I was already aware of the cases
concerning MDT's and related devices.
But, I wrote my reply in a hurry, and did not take time to put more thought
into it.
Just, wanting to make the point that it is not as 'black and white' as
Michael put it.

I am a family man, and can't afford to "challenge any legal interpretation".
I followed the Cheek saga closely, and did not agree where NYC and the
government took the case.

943. Re: [ArizonaScanner] Mobile Computers

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-16 20:59:27 UTC
From: Don l Armstrong
Topic: 936 Message: 943

Yeah, those MDT's are pretty handy little devices for the boys
and girls in the field. They have the ability to do a great deal of the
"mundane" stuff, which of course reduces the radio traffic and supposedly
the work load of the dispatchers... like 10-28's, & 29's, file reports,
check code 7 ect ect... it all depends on how it's setup from the get go!
Litrely the sky is the limit... in addition to the filing of above stuff,
they could also have AVL (auto. vehicle location via GPS), AVM (auto.
vehicle monitoring, which could be stuff like whether the lights are on
code 2 or code 3, is the officer in the vehicle or not, current speed ect
ect ect...)... yeah, the sky is the limit, if you can hook up a sensor to
something, data is data!!!
I can tell you that down here in Cochise County, the only folks
using such a system is the Sierra Vista PD. They are using the Motorola
system on 800 mhz (857.000 rx / 812.000 tx), and that it's pretty much
just a basic system... they can check for things like wants/warrants, run
plates and drivers licenses, file some reports, and send msgs to specific
units, or make system wide msgs.
I cant address the legality of intercepting/decoding the
messages... it's not my forte, but I can tell you from my personal
experience (lord knows I have spent enough time in that dispatch room to
know!) that most of the traffic sent via these things is the everyday
"mundane" stuff, spiked with interesting comments from the boys and girls
out in the field! In my humble opinion, we aint missing all that much!
As to this stuff that Walter mentioned "If its what I think it
is, it is CDPD, a packetized data system on cellular frequencies." I am
curious to hear more about this system and it's specifics!

Thanks Kevin. Right now,I'm listening to 154.085,and I'm hearing some very weak PD comms,on a repeater. They're using 10-codes,and I heard reference to a 239 (fight),and various driver's license and license plate checks. But,there's too much static on it,due to their distance, to catch locations for me to id the agency. Anybody have an idea? I'm in Peoria,by the way. I'm wondering how this will effect BVFD's use of a repeater on White Tanks,or vice versa? What CTCSS is being used on the District and Town channels? Thanks.

The district repeater is using 173.8 at the request of Phx fire. As far as co-users, you would have to do a FCC search. Eloy is one co-user on one of the freqs. all freqs , power and the repeater were coordinated by IMSA , there isn't a lot of activity on the repeater right now...just me doing roving checks for dead spots and distance checks..

Well it appears that during the shake down period, our local PD is having quite a few problems w/there new system. Heard last evening were comments such as: I have a grey screen, My screen is blank, I can's clear the screen, I can't access my report, data not clear. Disp asked if they wanted to come to 911 enter and get a replacement unit. A couple of officers said no they would patrol the remainder of the shift w/a truly reliable system: the radio.

Happy Holidays all,
I remember that there was a discussion here, about who Cactus is.

Someone said AZ Nat. Guard, but just by listening to overhead (Village of Oak Creek) air traffic, I am beginning to think that the many references to Cactus, by ABQ controllers, that it is "America's Worst", rather than the National Guard.

I simply never hear any references to America West.

Am I correct???? and how did that nickname stick ???..... I don't think I have ever heard any controller deviate from commercial airlines' names before.

Cactus is the call sign for America West airlines.

As to the origins, that is best left to somebody else.

Temp,

Actually, there are lots of airlines around the world that use a name other
than their own for the radio callsign.

"Cactus" is America West, simply because "America West" is too long to say
every time. It's two words, and five syllables, longer than most airline
names. "Cactus" was the somewhat logical choice for an Arizona-based
airline.
Additionally, "America West Express" (also too long to say often) is
referred to as "Air Shuttle ####".

Others include British Airways ("Speedbird"), Air Florida ("Palm"), and many
others.

Heya,

Also, just to throw in, National Guard planes are called "Copperhead" incase you ever hear them on the scanner ;)

Subject: [ArizonaScanner] "Cactus"

Happy Holidays all,
I remember that there was a discussion here, about who Cactus is.

Someone said AZ Nat. Guard, but just by listening to overhead (Village of Oak Creek) air traffic, I am beginning to think that the many references to Cactus, by ABQ controllers, that it is "America's Worst", rather than the National Guard.

I simply never hear any references to America West.

Am I correct???? and how did that nickname stick ???..... I don't think I have ever heard any controller deviate from commercial airlines' names before.

953. Which Law Enforcement Agency operates on 151.280 in Southern Nevada?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-19 16:02:56 UTC
From: d952@mohaveaz.com
Topic: 953 Message: 953

I know this board is mostly for the Southwest, but just in case someone familiar w/Nevada is reading posts please try to help ID agency. Started about 5:45AM Pacific time @ MP88 on an unannounched Hwy. Initial call was a person waving a gun. At about MP 45 unit stated that he had a Nye Cnty SO car on either side of him & was requesting a unit w/spikes @ MP 40. Disp. was asked if {Las Vegas} Metro was enroute & her response was no, Metro would not get involved. P/U blew past MP 40 & both tires on drivers side were blown out. Speed was reducing to 35, 30, heavy smoke showing from engine compartment, P/U now stopping in middle of Hwy. Very long pause before code 4 status. Three suspects in custody, 2 male, 1 female. No weapon found as yet. Nofity ICE {?} of Metro's HazMat team as we have approx 15 containers of unknown chemicals in the rear of the truck. I can't find 151.280 listed to any law enforcement agency in the state of Nevada in 6th Edition of SWFD. Any help would be appreaciated. I listen to this freq often and the units are all over Southern Nevada. Clark, Nye, Lincoln & Esmeralda Cnty's.

Thanking you in advance
Danny McLean

From: d952@mohaveaz.com
Topic: 954 Message: 954

@ conclusion of pursuit, one of the officers requested for his disp. to notify ICE {his agencies Haz-Mat?} oe {Las Vegas} Metro's Haz-Mat. Also while requesting checks on suspects, two of the systems the officer refered to was EPIC & I believe AAA.

Right now I'm hearing disp talk w/a unit on US 95 entering Tonopah, 313 miles from my home. That's pretty dam good coverage.

Thanks for your input Fred.

Danny McLean

BTW, I am aware of Clark Cnty Fire's resources, including Sta 24 where Haz-Mat unit & team are quartered {Industrial so. of Warm Springs}

956. Re: [ArizonaScanner] "Cactus"

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-21 03:54:30 UTC
From: BD18PACKER@aol.com
Topic: 947 Message: 956

America West's call sign, with Air Traffic Control, is called "Cactus" to eliminate confusion with American Airlines call sign, which is "American". This is done for speed of recognition by ATC, and the individual pilots, as well as brevity of words. Also, if a transmission should be interupted by inteference, it is less likely an America West flight "Cactus XXX", would be mistaken for an American Airlines flight, "American XXX". Similar deviations from standard monikers can be found all over the ATC channels, for many of the above reasons. Just thought you'd like to know...

73's to all...

965. Pro92b

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2000-12-28 02:25:18 UTC
From: Charles Simmont
Topic: 965 Message: 965

Does anyone have one of the Pro92b's with the new firmware (v3.28 or whatever the new one is)? If so how does it work with the trunked systems in the valley? Also how is the overall reception? I have read the review by Rich Wells on the Strong Signals website, but I am interested in knowing how the scanner preforms on the local radio systems before I decide weather or not to buy one next time they are on sale.

Question!!

Can someone englighten me as to what is meant when either Southwest Ambulance
or one of the east valley (usually Mesa) frequencies says:
("we are going on "altered
protocol" now for safety reasons")??

This happened several times during both the Christmas & New Years weekends.

Thanks, Greg B.

This means that they are using the Altered LOC protocols to treat the patient if I remeber correctly. I have not worked in the Mesa syatem for about a year now, but when i left, that was what the altered protocol meant.

968. RE: [ArizonaScanner] Question!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-02 04:23:36 UTC
From: Dan Rollman
Topic: 966 Message: 968

Hmm, I understood it very differently. Altered Protocol as I know it has to do with the dispatching rules for ambulances. Normally, ambulances are started immediately on most calls in Mesa. Under Altered Protocol (which the SWA supervisors puts in places when ambulance coverage is very low or something unusual is going on), most calls required the fire unit to specifically request an ambulance once it's determined that a transport will take place.

MesaFD alarms advises "all units, we'll be on altered protocol" so that they know they need to ask for an ambulance to get one.

Anyone else know more specifics?

Dan

969. 460.575/460.625 Info?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-02 12:06:02 UTC
From: kb7mib@hotmail.com
Topic: 969 Message: 969

Any information on how 460.575-465.575 and 460.625-465.625 are used by Phoenix Alarm, and who exactly has the radios for these two channels? I know Sun City holds 2 licenses for 460./465.625 (KOB791 and KVF695) and Phoenix holds 2 licenses,(KOA519 and WNAZ523), for both 460./465.575 and 460./465.625. Phoenix also holds a third license, WNAB745, for 465.575 alone for a control station. I have in my records a PL of 136.5Hz for 460.575, which I acquired while monitoring at a parade in Phoenix one year several years ago. Don't know what Rural-Metro/Sun City used on 460.625 when they were still affiliated. What are the channel numbers/designations for these two frequency pairs?

Also, the frequency of 154.355. It was originally licensed to Daisy Mountain, WNSU697. When they joined Phoenix Alarm, Phoenix got the license WPJD907, and I believe it was originally programmed in their radios as B-3 (Blue Deck 3). According to the SWFD, it's no longer programmed. Was it ever used? Is it still used by Daisy Mountain or Phoenix?

Lastly,is Ft. McDowell's FD radio system up and running? What's their apparatus numbering?

970. PHX cops put new bite on pursuits

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-02 15:38:06 UTC
From: Temp Berdan
Topic: 970 Message: 970

Sedona, AZ-Jan 1- 2100 MST- PHX police participated in a high speed pursuit, with DPS officers from PHX north on I-17 to Cordes Junction.
The wildly running vehicle was being pursued by DPS and three PHX canine units in what became a possible new deterrent to even thinking about running from the cops.
Due lack of direct communication between the cops and DSP, the DPS involved in the chase stopped all northbound traffic and were planning to run around the runner using three cars to block him at the 262 mile marker (Cordes Junction area). They also were planning the possible "rear end push" to spin the fast moving vehicle out of control. The driver was purportedly armed.
However their captain put a quick halt to those plans of action and their dispatcher, who was communicating with Firebird One (the PHX pd chopper), who was coordinating the PHX cops end of the chase, told the DSP officers to let their three canine units go forward to block and end the pursuit.
This action put a quick end to the runner, as he was stopped and three canines were immediately released and caused a Code 4 and 10-15 within 20 seconds.
PHX runners have been given new food for thought, as anyone who runs from their officers are now apparently going to be facing three very efficient four footed officers, who can legally chew on their hides.
This triple bite technique may be the forerunner of a new deterrent that will put a screeching halt to any consideration of trying to run from the PHX PD in the future.
Kudos to their triple threat innovation.

-78-

As best I know, those two UHF channels still have radios attached to them at Phoenix FD, however the only time I've heard them used is for, as you mention, parades, and then some radio tests here and there.

154.355 I have not heard activity on in several years. OLD Blue-3 (154.355) was used for a while as helicopter LZ's, the way A3 is now (154.070). I believe they removed it and went back to using A3 because they got too much interference from the powerful RMFD repeater (154.370) on Thompson Peak... particularly the helicopters. Don't think it's used at this time in the Valley, but maybe someone else can provide some insight.

Ft McDowell FD has the 400-409 range in the numbering scheme.

By the way, the "update" book for the SWFD (small 60 page booklet containing a Phoenix area quick reference guide for the car, etc., as well as page-after-page of updates like these to SWFD6) is due to hit store shelves some time in February. This booklet will not replace SWFD-6, but simply add new information to it. You'll still need SWFD-6 in hand to make much sense of the updates described in the upcoming booklet.

Subject: [ArizonaScanner] 460.575/460.625 Info?

Any information on how 460.575-465.575 and 460.625-465.625 are used by Phoenix Alarm, and who exactly has the radios for these two channels? I know Sun City holds 2 licenses for 460./465.625 (KOB791 and KVF695) and Phoenix holds 2 licenses,(KOA519 and WNAZ523), for both 460./465.575 and 460./465.625. Phoenix also holds a third license, WNAB745, for 465.575 alone for a control station. I have in my records a PL of 136.5Hz for 460.575, which I acquired while monitoring at a parade in Phoenix one year several years ago. Don't know what Rural-Metro/Sun City used on 460.625 when they were still affiliated. What are the channel numbers/designations for these two frequency pairs?

Also, the frequency of 154.355. It was originally licensed to Daisy Mountain, WNSU697. When they joined Phoenix Alarm, Phoenix got the license WPJD907, and I believe it was originally programmed in their radios as B-3 (Blue Deck 3). According to the SWFD, it's no longer programmed. Was it ever used? Is it still used by Daisy Mountain or Phoenix?

Lastly,is Ft. McDowell's FD radio system up and running? What's
their apparatus numbering?

975. Re: Mobile Computers

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-03 02:00:50 UTC
From: Phil Smalley
Topic: 936 Message: 975

Here's my take on it.

If you know how to monitor such devices, and you feel the need to do it, that is fine. Just keep it to yourself. I'm not saying I do and I'm not saying I don't. I'm just saying "use some common sense".

Don't do what others have done and post it up on the internet for all the world to read. Don't show it off to anyone who cares to look. When questions arise on how is it done, tell the asker to figure it out themselves. (That way they cannot blame you for their own actions later.) The information is out there if you know where to look. 'Nuff said.

And finally, when it comes to matters of legality (unless you have an ESQ at the end of your name and are getting paid by the hour to research and quote case law) tell others that knowing their own local laws and abiding by them is THEIR responsiblity. Not yours. Keeps people from suing you later.

Now, what this whole diatribe had to do with the original post in this thread eludes me. All the guy said was what he heard the officers saying. How that turned into illegal data monitoring is beyond me.

-Phil

Why can't anybody use "Interagency" to co-ordinate these things?????
[ttb2] Knowing that those freqs. do exist, perhaps the chopper was acting
as a repeater for their cops who were obviously far out of their territory.
[ttb2] The DSP dispatcher said the only way to talk to the PHX was for her
to relay and that their contact was via the chopper.

the DPS
> involved

Don't have "Captains" any more. Or "Majors". Only "Commanders".
[ttb2] Walter, that is strange, as the term 'Captain was used on several
occasions during the pursuit.
Do you suppose that it was a PHX PD Captain ???
put a quick halt to those plans of action and

> Kudos to their triple threat innovation.

Anybody else hear this? Nothing was noted on the DPS "Duty Log".
[ttb2] I was only listening to 460.425 as I don't have the PHX freqs.
plugged in, because I'm too far away to hear them up here in Rim Country.
What a terrific way to end a chase !!!!
if the press were to jump on this "innovative" technique, perhaps the bad
guys would get scared enough of the triple dogs and not go for as many joy
rides.
[ttb2] As the dogs are being controlled by their police handlers, would
doing this cause a bunch of lawsuits???

Thanks for the input Walter. It is nice to hear a police pro give his
insight about the goings on.
[ttb2] Cheerios,

I find it slightly hard to believe that PPD would authorize K-9 units to chase car theft suspects, or any suspect, for that matter, without them being confined to a small area. The Liability costs alone, and the bad PR from a dog biting the "wrong" person, without a K-9 handler in control, are staggering. I think perhaps K-9 might have been involved in the original pursuit and continued until the suspects bailed. And finally, when did PPD stop using the helicopters to do chases, with ground units as backup? I remember when PPD would only authorize a chase out of the city limits when a felony suspect was involved, or officer involved shooting or injury had taken place. Has this changed?

These are a few Freq's I can pick up in Globe. 146.1400, 146.7400, 155.0300, 448.4250, 461.2250, 448.650, 161.5500, 154.2050, 154.2350, 158.7600, 159.0600, 154.7700, 153.9000, 155.0250, 153.9050, 158.8950, 158.8350, 158.3050, 155.0350, 463.0250, 156.0900, 460.5250, 464.4700, 153.1550, 153.3650, 154.0550, 460.0250. If anybody has these freq's, you know the range I can pick up. If you have some that I didn't post please post the ones you've got. Some of these freq's are from farther than I thought I could get out of this Uniden Bearcat Hanheld. I can get some from Casa Grande, Tucson, Arizona City, just to name a few.

Yup, I thought it unusual as well.... but damned innovative deterrent (sans lawyers).

it must have originated as a felony, as the driver was purported to be armed.

DSP did dispatch Ranger (1?) from Flag, but he was to late to get in on the action, and again, Firebird handles the comms. with DSP disp..

Walter, did you learn any more about this one???

BTW, AFAIK, no ambulance was called to stopping point, so the actual bite may not have been applied.... just an triple threat that would sure as heck get my attention.

Topic: 970 Message: 981

Thanks Walter.... that explains why the dispatcher kept mentioning that he was always losing and regaining control of vehicle. I had assumed high speed, as I didn't hear the beginning of pursuit.

it doesn't explain that the dispatcher emphasized that three canine units were to block as well as "the dogs have been released", with the code four being given in very short order.

If there wasn't a possible liability issue with this type of stop, I would surely think that if the press played up the three canine use, potential "runners" would know about it, and they might just not run.

If they do run, then you dispatchers could call it a Three Dog Night !! ;))

> territory.

(wh) IARS (InterAgency Radio System) is simplex on Hi-band and cross
banded to IARS U through a voter at the MCSO

> [ttb2] The DSP dispatcher said the only way to talk to the PHX was
> for her
> to relay and that their contact was via the chopper.
>
(wh) The problem is, no-one wants to have their units go to a channel
they don't control.
Interagency is run by the local sheriff's office in each county.

> SNIP

> > However their captain
>
> Don't have "Captains" any more. Or "Majors". Only "Commanders".
> [ttb2] Walter, that is strange, as the term 'Captain was used on

> occasions during the pursuit.
> Do you suppose that it was a PHX PD Captain ???

(wh)Must be. We went to "Commander" last summer.
Or maybe in the heat of the moment, someone forgot.

> SNIP
>
> Anybody else hear this? Nothing was noted on the DPS "Duty Log".

(wh)Posted the duty log today

> [ttb2] I was only listening to 460.425 as I don't have the PHX
> freqs.

(wh)DPS District 12

> plugged in, because I'm too far away to hear them up here in Rim
> Country.

(wh)You might be surprised at what you can hear. Check out the files area
on e-groups.
I posted some system maps last spring.

Also, sometimes the dispatchers cross-patch a couple of districts to give
a "relief" break.

983. Re: [ArizonaScanner] Question!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-04 02:19:05 UTC
From: gb521@aol.com
Topic: 966 Message: 983

Thanks, Dan.

Subsequently, I was able to check this out with someone on the inside in Mesa, & you are correct. This occurs mainly during peak holiday events, when demand is high, and resources are low.

Thanks again,

Greg B.

984. New Phoenix TRS?

Just wondering if anyone has heard anything new on the new system Phoenix is rumored to be working on....

I have a list of frequencies that I've been checking from time to time, but they are all quiet. Makes me wonder if maybe I have the wrong ones...

Anyone who works for the city care to enlighten us on this? It's supposed to be up by 2002 - I would have figured it would be at least in the early testing phase by now.

Thanks,
-Phil

987. Digital Module Component

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-07 17:47:03 UTC
From: d952@mohaveaz.com
Topic: 987 Message: 987

Was speaking w/a friend in Anaheim, Calif. last evening and he was of the opinion that perhaps one or more of the scanner mfg's would have a digital modular component {to be shown,(CES show in Vegas) but unaware of availability} to attach to or install internally to current 800 MHZ's units to make them fully digital.

Speaking of digital comm's. Public Safety Agencies who have already invested mega {millions} of bucks for non-digital systems, will it be just a simple add on module to upgrade or will it require yet again many millions of public funds?

Danny McLean

989. A GUIDE TO THE 2001 INAUGURATION

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-08 04:19:34 UTC
From: d952@mohaveaz.com
Topic: 989 Message: 989

A GUIDE TO THE 2001 INAUGURATION

By

Alan Henney (alan@...),

Willard Hardman (hardman1@...),

and Mike Peyton (Michael.Peyton@...)

For the second time in history, the son of a former President will be inaugurated. George W. Bush will be sworn in as President of The United States of America on 20 January 2001. But what frequencies should we monitor for his inauguration? At about this time last year we were programming our scanners with frequencies for Y2K doomsday scanning. This year it's not a computer glitch or power failure for which we're preparing, but a new presidential administration, surrounded by controversy. A number of special interest groups have threatened demonstrations. This should only make scanning more interesting.

As civilian and military agencies, along with private companies, scramble to complete their inauguration plans, the city's population, as well as its radio activity, escalates as Inauguration Day, 2001 approaches. Few events offer scanner listeners so much variety monitoring over the course of a few days -- including parades, protests, pomp, and presidential motorcades. To help organize our scanning efforts, we have taken a look at past events in the Nation's Capital, and offer this scanner guide for the 2001 Inauguration.

After looking at recent history in four-year increments, it's startling how much our hobby has evolved. This inauguration we're going to see a tremendous increase in the kinds of technologies employed -- many of which are dreaded by scanner hobbyists -- Nextel, digital trunked, and encrypted conventional radio systems, and increased use of "voice-less" computer networks for what had once been transmitted over the radio.

On the day of the swearing-in ceremony you might want to take your scanner and head for Capitol Hill. Or perhaps you may prefer to stay warm at home. Regardless of where you are, we hope this frequency profile will add to your listening enjoyment.

This profile is just to help get you started. Please take the next step and track down frequencies and other information we have yet to discover. And don't forget, we want to hear from you! Please share your experiences and findings with the rest of us. Check the Scan-DC

e-mail list for any updates.

The presidential inauguration is a major production that involves nearly every federal agency. The three major players are the Presidential Inaugural Committee (PIC), the Joint Congressional Committee on Inaugural Ceremonies (JCCIC) and the Armed Forces Inaugural Committee (AFIC).

For details, visit their Web sites:
http://www.presidential-inaugural.com/
http://inaugural.senate.gov/
http://www.afic.army.mil/

If you have not already done so, call the US Capitol (202-224-3121) and ask a Congressional representative for inaugural passes. Don't give up, some representatives have tickets left while others claim to have long run out.

FEDERAL AGENCIES

U.S. Capitol & Congress

Capitol Police channel usage varies from day to day. The department tends to use the first three channels for routine dispatch operations, and its last two for specialized

NATIONAL PARK SERVICE (NPS)

The NPS is divided into 12 management units in the National Capital Area. Only those directly involved with the inauguration are listed. Many of these frequencies, however, are shared, so you may hear traffic from other locations.

US Park Police (NPS)
166.7250 r/s CH1 & CH6 Secondary
166.9250 r/s CH2 & CH7 Dispatch
167.0750 r/s CH3 & CH8 Administrative
166.8500 s CH4 Tactical

National Park Operations - National Capital Area
168.4250 s/r NPS-Parks East
(Fort Washington)
172.4750 s/r NPS-Parks Central/Rock Creek Park (includes National Mall)
172.7500 s/r White House Maintenance Unit
171.6500 s White House Visitor Control Ops
411.6750 r White House Liaison
168.3000 s/r C&O Canal Park Rangers
464.8875 s Kennedy Center Staff/Shuttle Bus

Kennedy Center security used 461.325 prior to switching to Nextel. The center is licensed on 463.7125/468.7125, 463.8125, 464.7625/469.7625, 466.5875, 467.8125, 468.5375 and 469.4125 (none of

which have been reported in use).

GENERAL SERVICES ADMINISTRATION

The GSA Federal Protective Service (FPS) digitized its primary radio system in November. Additional frequencies are used at specific sites as well as those used by contractors. GSA prepared the 90,000-square-foot transition headquarters at 1800 G Street NW (former Y2K headquarters). Installed are 300 work stations (240 more are available if needed), complete with computers, telephones, copiers and fax machines. In addition to the space, furnishings and computers, GSA also provides the information technology, telecommunications, payroll, financial and other management support for the transition team. GSA provides similar services to support the inauguration.

163.1750 s GSA HQ Transportation
168.5750 s GSA Region Building Maintenance
415.2000 r/s CH1 & CH3 FPS (Astro)
417.2000 r/s CH2 & CH4 FPS (Astro)
411.2750 r/s CH5 & CH6 FPS (Astro)

NTIA-Coordinated Trunked System

(AKA Federal SMR and DC1)

This is a Motorola trunked radio system popular among both civilian and military federal agencies in downtown Washington, D.C. including various museums, the National Archives, FDA, GSA, NDW, Bolling AFB, etc. The system has over 50 talk groups, and more may be added for the inauguration.

406.8500 Control/Voice
408.4500 Control/Voice
408.7000 Control/Voice
408.9000 Control/Voice

409.7500 Voice Only
410.3750 Voice Only
Rx 406.1 (start); Channel Spacing 25 KHz

SMITHSONIAN INSTITUTION

169.0500 s Motor Pool
169.2000 r/s CH1 & CH2 Security

Several Smithsonian museums communicate on the NTIA-coordinated trunked system. The National Zoo, also a part of the Smithsonian, has completed its move to the NTIA-coordinated trunked system.

NATIONAL GALLERY OF ART

168.3500 r Administration
406.5500 r CH1 Security
408.0000 s CH2 Security & Safety

DISASTER MEDICAL ASSISTANCE TEAMS

The medical teams, a recent addition to the special-event landscape in Washington, have used both channels during recent events in the city. They employ an analog scrambling system.

407.1250 r
409.0000 r

FEDERAL BUREAU OF INVESTIGATION

FBI involvement is somewhat limited. They will be active providing intelligence and advice as required. In addition, their hostage teams and other similar units will be on stand by should they be required. The vast bulk of FBI radio traffic is encrypted.

U.S. SECRET SERVICE

Secret Service agents protect the president, past presidents, foreign heads of state/government, and others as directed. Much of their radio traffic is encrypted. In addition, 165.6875 is mostly digital (Astro). Treasury Common, 166.4625, is often a federal command post channel. One may find the Secret Service or an allied agency using additional frequencies. Some of the ad hoc channels which have been used in Washington have included: 166.0625, 166.8, 167.0, 168.1, 168.2, 168.725, 168.975, 169.1, 169.45, 169.55, 169.7, 169.75, 170.1 and 173.625. Try the White House Communications Agency channels listed in the military section too.

165.7875 s Baker
165.3750 s Charlie
165.2125 s Mike
164.8875 s Oscar
164.4000 s Papa
164.6500 s Tango
165.6875 r/s Washington Field Office
166.4625 s X-Ray, Treasury Common

Uniformed Division, Secret Service (UDSS)

The UDSS provides external guard services to the White House and selected US and foreign facilities in the Washington area. The first two channels, which are mostly encrypted, are used by the White House Branch. 414.675 is the primary dispatch for the Foreign Missions Division. UDSS radios used for training and other purposes may be pressed into service. Try 414.8, 415.1, 415.675, 415.75 and 415.8.

418.7750 s CH1
418.3500 s CH2
414.6750 r/s CH3 & CH4

415.9750 r/s CH5 & CH6
414.8500 r/s CH7 & CH8
415.6500 r/s CH9 & CH10
407.9250 s Canine Tactical

Selected Executive Branch/Congressional

Security/Driver Details

Many of these frequencies are often encrypted. Not all cabinet secretaries have a security detail, and in some cases, a specially trained driver doubles as the

AFIC's Joint Operations Center (JOC) overlooks the Air & Space Museum from the second floor of the federal building at 600 Independence Ave SW. Ten wide-screen TVs line the front wall of AFIC's JOC. They are labeled as follows: CBS, CNBC, CNBC, C-SPAN2, Fox, MSNBC, NBC and the Weather Channel. The two larger center screens are CNN and CNN-Live. Major Carnell said they can bring up Web or other sources on the screens if necessary.

The JOC has 24 positions (excluding two supervisor positions in the rear of the room). The JOC participants are similar to those in 1997, including representatives from the military, D.C. government, PIC and key law enforcement agencies. Carnell said the FBI, Secret Service and many of the other agencies have their own JOCs. The Secret Service is the lead law enforcement agency.

During the 1997 inauguration AFIC command and control nets operated on the Department of Defense UHF trunked system (AKA, Belvoir system, below). Localized activity primarily remained on the older VHF channels. We verified AFIC on the following six frequencies during both the 1993 and 1997 inaugurations: 143.875, 148.375, 148.875, 149.125, 149.275 and 149.875. (148.475 and 143.15 have already been noted in very limited use as of December 2000)

These additional frequencies were used in 1997: 138.35, 138.5, 138.9, 139.7, 139.725, 139.8, 139.975, 140.0, 140.375, 140.85, 141.575, 141.65, 141.725, 141.75, 141.8, 141.85, 141.9, 142.125, 142.175, 142.2, 142.25, 142.65, 143.025, 143.85, 143.95, 148.425, 148.475, 148.675, 148.725, 148.75, 148.825, 149.15, 149.175, 150.225, 150.3 and 150.325.

And in 1993 we found AFIC on 138.325, 141.925, 142.325, 142.4, 142.45, 142.475, 143.375, 148.55, 148.7, 149.775 and 150.425. The general trend during both inaugurations was to use frequencies below 141.7 as inputs and those above 148 MHz as repeater outputs.

In 1997, 17 talkgroups were allocated for AFIC's use on the same trunked system used by Fort Belvoir. Because of AFIC's close relationship with the Military District of Washington (MDW), which also uses the same trunked system, we anticipate that AFIC's radio

backup will include use of this system as well. Given the substantial changes in technology that have occurred, use of the old VHF radios is doubtful, but possible as back-ups.

DoD MULTI USER MOTOROLA

TRUNKED SYSTEM

406.5250 Control/Voice
407.9500 Control/Voice
409.2500 Control/Voice
406.2000 Voice Only
406.3000 Voice Only
406.7750 Voice Only
407.0250 Voice Only
408.8500 Voice Only
411.2000 Voice Only

Rx 406.2 (start); Channel Spacing 25 KHz

This trunked system has a great volume of encrypted transmissions. The primary encrypted user, however, should be relatively quiet during the inauguration. There are a number of other military users on this system that will not be directly involved, such as Fort Belvoir, Defense Logistics Agency, CECOM, and others.

MILITARY DISTRICT OF WASHINGTON (MDW)

The Army's MDW has overall responsibility for the coordination and operation of DoD participation in government ceremonies in the capital area. MDW will be busy in almost every aspect of the ceremonies from security to transportation to logistical support.

MDW is a primary user of the DoD system noted above.
The command, operations and logistics nets of the MDW (known as "State Sword") talk groups will carry a large volume of radio traffic. All MDW radio has migrated to the trunked system. VHF is no longer in use. Included will be several specific temporary talk groups for the inauguration. However, the regular talk groups for Military Police, Engineer, Transportation, Comunications-Electronics, and Logistics will be quite active. Of particular note will be the talk group for "ASA" - Army Support Activity (which also identifies as "CP").

White House Communications Agency (WHCA)

Another important military element which provides support to the inauguration as well as the President is the White House Communications Agency (WHCA).

LOCAL GOVERNMENT

Numerous agencies are involved in staging this quadrennial extravaganza. Although it is a federal function, local government becomes involved as well. Of primary concern to the District government will be protest and crowd control, general law enforcement, fire/EMS services, creating a more positive city image by keeping the homeless and prostitutes off the streets, and assisting federal agencies with the protection and movement of dignitaries.

DC FIRE AND EMS

The District fire/EMS department says it plans to have its digital Motorola trunked radio system fully implemented during December. Keep the VHF channels just in case (dispatching will continue on 154.19). System frequencies are as follows: 852.6125, 852.6375, 852.6625, 852.6875, 852.7125, 852.7375, 852.7625, 852.7875, 855.2125, 855.2375, 855.4625, 856.9875, 857.9875, 858.9875, 859.9875 and 860.9875. The department earmarked three talkgroups for special events, they are: 2096, 2112 and 2128 (all digital).

154.1900 r/s CH1 & CH5 Dispatch
154.2350 s CH2 EMS Coordination
154.2800 s CH3 Fire Mutual Aid 2
154.2050 s CH4 Fireground

DC EMERGENCY MANAGEMENT AGENCY

DC EMA uses digital talkgroups on the same trunked system as D.C. fire/EMS but in the 33000-34000 range. Supposedly it has retained its former channels, 45.6 and 45.56, for special events because of the abundance of old inexpensive radios.

METROPOLITAN POLICE DEPARTMENT

460.1, 460.275, 460.325, 460.4 and 460.45, which are routinely used as tactical and citywide channels, will be reassigned to various details and elements as required, including MPD's Civil Disturbance Units (CDU), Traffic Division, vending, prisoner control, and Special Operations Division (SOD) officers, and the Command and Information Center (CIC). The older VHF channels have in the past been put to use for special events.

MPD channel plans vary depending upon the radio. Frequencies for only three of the seven police districts are listed since most inaugural sites and visitor locations are within the 1st, 2nd and 3rd districts.

158.7900 r CH1 Support Services
158.8500 r/s CH2 & CH3 CID
155.3100 s CH4 Surveillance 4
155.4150 s CH5 Surveillance 5

465.0000 s SOD ERT Surveillance 3 (Astro)
453.3125 s Citywide Surveillance 1
458.3125 s Citywide Surveillance 2

DC PUBLIC WORKS DEPARTMENT

The District's public works crews will be involved in cleaning streets, facilitating VIP movements, blocking roads, and assisting the National Park Service and the Architect of the Capitol. The public works mostly uses Nextel, although you will still hear some chatter on the department's old channels (37.1, 37.94, 453.45 and 453.75).

Buckeye Fire and the Fire Dist are supposed to be going online with Phoenix "sometime" this month. Radios in the trucks have been programmed, station packages are setup at 311 and 324 and everything should be about ready to roll. I really don't know how the district plans to handle the staffing situation at the outlying stations. I suppose it will work about the same, the stations will get dispatched and someone will run to the barn and grab the Engine, Brush, or Tanker and the others will respond by POV. As for Tonopah and Harquahalla being dispatched by Buckeye, haven't heard that one yet, should be interesting though.

At 11:28 PM 1/7/01 -0500, you wrote:

From: kb7mib@hotmail.com
Topic: 994 Message: 994

I'm curious as to what types of units are now at fire station 19 at Sky Harbor? Attack 19 used to be the command Suburban. Apparently not anymore? What kind of unit is Squad 19? Could someone give me a rundown of the types and their designations? Thanks.

John.

Is Harquahalla Valley on Tonopah's system? What are the numbering schemes for both?

John.

--- In ArizonaScanner@egroups.com, Charles Simmont <icp509@i...> wrote:
Buckeye Fire and the Fire Dist are supposed to be going online with Phoenix "sometime" this month. Radios in the trucks have been programmed, station packages are setup at 311 and 324 and everything should be about ready to roll. I really don't know how the district plans to handle the staffing situation at the outlying stations. I suppose it will work about the same, the stations will get dispatched and someone will run to the barn and grab the Engine, Brush, or Tanker and the others will respond by POV.

As for Tonopah and Harquahalla being dispatched by Buckeye, haven't heard that one yet, should be interesting though.

996. Outlying Fire Departments

I'd like to know what the proper numbering schemes are for the following fire department's,if anyone has them.

Aguila
Gila Bend
Gila River
Wickenburg
Wittmann

I asked about the numbering for Harquahalla Valley and Tonopah in my previous post, and Ft. McDowell's units were covered a few posts prior, thanks. (I'm just full of questions tonight.) I have heard some of the units on the radio from Gila River and Wittmann, but I'm not sure of the full listing of them. And I'm not sure, but I think I've heard or read a reference to a fire department/district in Morristown, up the road from Wittmann. Is there a seperate FD there, or are they covered by Wittmann, Wickenburg, or Rural-Metro?

Thanks,

John.

The only dept. in your list that I know of that follows the Phx numbering system is Gila River, They are the 500 series I believe. All the rest follow their own numbering system (i.e. Engine 1, Engine 2, etc). As for Harquahalla FD & Tonopah FD, I have no idea what frequencies they are operating on, haven't been able to find them on the air.

From: pem2
Topic: 1000 Message: 1000

Group,
Does anyone out there have any information on the Native American Air Ambulance LTR trunked radio system? I'm trying to program a BC780XLT and for LTR systems each frequency must be programmed to a specific "HOME CHANNEL". The frequencies are listed in SWFD 6 on page 77. (A great resource for all scannists, everyone should have one). Each frequency has a corresponding HOME CHAnnel, does any know what they are?
TIA,

Paul

From: Charles Simmont
Topic: 1000 Message: 1001

I also have been attempting this and haven't gotten very far. I have programmed the frequencies in the same order that EDACS frequencies are programmed, lowest to highest. About the only thing I get is during the day various ID's will flash on the screen with no audio. The SWFD lists the Native Air TG as being 4012, that is the TG if you are using a RS Pro92, the Uniden TG is 0-04-012. So if anyone happens to find the secret for successfully trunking LTR systems on the 780 please help those less fortunate :-)

1002. MCSO UHF Frequencies Gone

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-12 21:22:18 UTC
From: Danz, Dan
Topic: 1002 Message: 1002

A while ago, some of you asked about continued use
by MCSO of non-800-MHz channels....

MCSO has dropped use of the old conventional UHF
channels 1 thru 7. Specifically:

Ch 1 460.0500 / 465.0500 West Dispatch
Ch 2 460.1000 / 465.1000 West Tactical
Ch 3 460.1500 / 465.1500 East Dispatch
Ch 4 460.2000 / 465.2000 Central
Ch 5 460.1750 / 465.1750 East Tactical
Ch 6 460.0750 / 465.0750 Info
Ch 7 460.1250 / 465.1250 Command/Phone Patch

will no longer be assigned to MCSO on Feb 01, 2001.

The VHF channel, Search - 8, 159.0900 remains in service.

1004. RE: [ArizonaScanner] MCSO UHF Frequencies Gone

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-12 22:00:34 UTC
From: Lindsey, Mike
Topic: 1002 Message: 1004

I sit on the Regional Frequency Coordination Committee and the last discussion on those frequencies was that MCSO was not going to release them until they were 100% confident in the Motorola trunk system. There appears to be 2 agencies that would like those frequencies. One is the bus transit system for Phoenix and the other is DPS. Until MCSO releases them they will probably sit idle. Once they release them any agency will be allowed to apply. Should be interesting.

From: Danz, Dan
Topic: 1006 Message: 1006

An e-mail alert from Dispatch Monthly magazine today
had the following notice.

----begin quote-
On Thursday the FCC adopted a Fourth Report and Order and Fifth
Notice of Proposed Rulemaking establishing a framework and issuing
guidance on use of the 24 MHz allocation in the 700 MHz band. Most
significantly, the Commission adopted Project 25 Phase I as the voice
standard for communications on the interoperability channels, and
adopted the data standard incorporated in the Project 25 suite of
standards for data communications on the interoperability channels.
In a press release, the FCC said, "By adopting the Project 25 Phase I
standard, the Commission promotes the development of public safety
equipment in the 700 MHz band and facilitates the effective use of
that band by public safety entities." The FCC also asked for comments
on migrating to an efficiency standard of one voice path per 6.25 kHz
on the General Use channels, concluding that the earliest date the
Commission would require 6.25 kHz technology would be December 31,
2005. As of Friday evening, the full R&O hasn't been posted, but
we'll keep you informed.
----end quote-

Glad to see they at least picked a
public standard ... and, with a little bit of luck,
we'll have a digital scanner by 2005. :-)

From: Dan Rollman
Topic: 1006 Message: 1007

Well not to flare up the rumor mill again...
But some people who were at CES last weekend spoke with a Uniden rep who advised the next major radio out from them would be the "3500" which would essentially be a handheld version of the 780. While they said the 780 does not have an easy way to "attach" a digital add on board, the 3500 would either have digital in it, or an easy way to add it. Timeline for the 3500 was "ten months". Which I guess on the Uniden calendar (with it's reputation) may equate to 2005, but one can hope.

Enjoying my 780's and ready for my 3500,
Dan Rollman

1009. New PMT Ambulance repeater

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-01-19 15:08:52 UTC
From: kb7mib@hotmail.com
Topic: 1009 Message: 1009

I just found a new repeater channel being used by PMT. I checked the FCC website, and it was issued last year.

WPQC426 150.830 (159.990 Input) White Tanks. Issued May 18, 2000. This
has an "IG" service code on it.

WPRF429 150.830 (159.990 Input) Usery Pass/Shaw Butte. Issued August 28, 2000. Again, an "IG" service code.

WKND226 155.160 (156.045 Input) White tanks/Mesa. Issued March 1, 2000. A "PW" service code.

I get much better reception on 150.830 than on 155.160 here in Peoria. Full scale compared to one segment on my Icom W-32A. Don't know the CTCSS yet. Although IG is the Conventional Industrial/Business Pool, they're using it for paging and dispatch it seems.

John.

From: Curt Steger
Topic: 1012 Message: 1012

Can anyone tell me the frequency of the Maricopa (City of) F.D.? Also if this is a volunteer department. I think it is volunteer as I do not see anyone at the fire-house..

Thanks,

Curt

Looks like its either going to be 154.220 or 150.805 and I do believe they
are a vol dept.

Incident Command Page will be holding its monthly get together tomorrow (Sat 27th) at the Fudruckers restaurant at A-51 (squaw peak fwy) & Highland Avenue. We show up at 6pm and usually stay till 8:30 or until they close and kick us out :-) All are welcome to attend and talk about scanners (the new 780xlt is always up for discussion) share frequencies or just share stories. For a map, see the ICP webpage at http://www.incidentcommandpage.com

1020. Phoenix Metro Traffic?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-02 23:55:27 UTC
From: kb7mib@hotmail.com
Topic: 1020 Message: 1020

This afternoon, I saw three police Kawasaki 1000's at a Furr's Cafeteria in Sun City at 103rd and Grand Ave's. One bike had a thick, three-foot or so long antenna, similar to a Helical-wound CB whip, and one had either a UHF quarter-wave, or an 800-band antenna (very short). I didn't see the antenna on the third. The bikes were marked Phoenix Metro Traffic. They had red and blue lights on them, like any other police bike. Any idea as to who they are? What agency?

At first I thought they were MCSO bikes, and since I've only seen them twice before, I decided to check them out. That's when I saw that they weren't MCSO. Which leds me to my next question. Where/when do they use their bikes? I've only seen them at one of the job fairs the SO held last year, and again when the Hell's Angel's and a few other groups rode into town coming down Grand Ave., being "escorted" by several agencies.

Thanks for any info.

John

Phoenix Metro Traffic was the name of a traffic reporting agency contracted by many valley radio stations in Phoenix, a few years ago. Don't know if this is the same group. I also remember there used to be a number of helicopters they used to give traffic reports, and they broadcast in the 450 Mhz band, back to the radio stations and their base. This info might be available by FCC record search, or possibly SW directory. I will check my listings for any info on Phx Metro Traffic.

I belive the company you are thinking of is either Metro Networks or
SkyView Traffic. Both do traffic reports for local TV & Radio stations
here. My guess on what the motorcycles were is funeral escorts. Just
about any funeral that has a procession to the gravesite needs an escort an
some need several depending on size.

Hi guys,

I'm familiar with the motorcycle escort company that you see around town. They have one large rotating red light behind the seat. Not sure if they have any lights in the cowling up front. The bikes I saw did have both a red and a blue light in the front cowling, just like any other police bike. Nothing in the back. At least not on top where I could see it, because that's where the antenna was. There may have been a light or lights lower with the tail lights. And they were definately the Kawasaki Police 1000's.

John.

The motorcycle escorts or the funeral cops as they are often referred to are dressed in black & white uniforms and I have only noticed red lights on the front and rear of the bikes. Not sure if this is what was seen in Sun City though.

There is no match on the FCC website for that name. Nothing under Arizona Motorcycle Escort, either. I even tried a wildcard search. Nothing. I guess the only way to figure out more, is to see them again, and actually ask them who they are.

John.

1028. Apparatus Numbering.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-08 06:47:45 UTC
From: kb7mib@hotmail.com
Topic: 1028 Message: 1028

I'd like to know which, if any, departments have the following number series reserved for them:

340-349:
350-359:
360-369:
370-379: Harquahalla Valley? (Confimed?)
380-389:
390-399:

I would assume that these would all be West Valley departments, due to the 300 series usage in the West Valley. (Black Canyon City notwithstanding, but Daisy Mountain in the 140's isn't exactly West Valley either.) I figure that eventually, Wittmann, Wickenburg, Aguila, Tonopah and Gila Bend could be assigned to these series'.

I know everything from 1 (Phoenix) to the 330's (Black Canyon City). Ft. McDowell is 401-409. Phoenix picks up again at 700-739, and then Rural-Metro has the 800-859 series. (Do they go higher? 860's, etc?) I know Phoenix has several car's running through the 500, 600, 700 and 900 series. Do they still have Car 810 and Car 811, the Chaplains', since Rural-Metro uses this series?

Lastly, is the supplement to the 6th Edition of the SWFD out yet?

Thanks.

John.

350-359 is the Palo Verde Nuclear Generating Station & 370-379 is the Harquahalla FD. I don't know about the others listed. Phoenix still uses #'s in the ranges other than 1-99 and 700-799 for various car's including C810 Chaplain & others.

Kevin,
I thought 351-359 was Palo Verde? Have seen the BC's pickup in
Buckeye several times and thought it had BC351 painted on it?

From: Dan Rollman
Topic: 1028 Message: 1038

John,

In answer to your other question in your email, the supplement (update) to the 6th Edition of SWFD is expected to be available by the end of this month. The delay is due to the addition of more new and updated information than was previously expected. Additionally, the supplement booklet (about 60 pages) will also serve as a "quick reference" for use in the Phoenix valley. It will include the entire "Public Safety and Government" frequencies section for Maricopa County, as well as many important / commonly used radio codes. It will also include a map (not to scale or exact in its boundaries) that will roughly show the outline of areas for each of Phoenix FD's Tactical channels (what parts of the valley use what tactical channel).

A limited number of the booklets will be available for online purchase from our website (www.scannerstuff.com) for $14.99, the retail price, about a week before the bulk of the print run is received and can be shipped to dealers. It will be mailed First Class to anyone who orders from the website, and should take only about 2 days to receive in the Valley or in Tucson. Rural areas may be a little longer.

I'll be sure to post an update here when the booklet is released, but you may also want to periodically check out website later in the month to see if it is available for online order.

Finally, if anyone has new or updated information (since the relase of the 6th Edition of SWFD back in April), please email it to updates@....
Thanks in advance for any updated information you can share with other scanner listeners.

Regards,
Dan Rollman
SWFD Editor

Do you mean the "10" codes?
Or??????

I will post an image of the official "RADIO CODES" card that
is issued to the officers on the E-Groups(???) website in the
ArizonaScanner area in a couple of days.

Would it be appropriate/allowed to send it via the list?

Walter,

We would love to add an image of the radio codes card to the files area on
our lists webpage on YahooGroups.
I don't think the list is configured to allow attachments to be attached to
an email sent to the list. That way, people who might not be interested
don't have to get it in their email. Those who would like it can download it
from our lists webpage.

Thanks!

Yes, that's what I thought to, but Gila bend received 350 series from the county coordinator last week...never had understood why they would include Palo Verde equipment in the county system, because they aren't allowed of the site by the DOE.

I'll look into it further.

Well I know they do travel off the Palo Verde grounds, their battalion chief has lunch in Buckeye fairly often and I know in the past some of their units have responded to MVA's in the area. Good to hear though that Gila Bend is going online with Phoenix also, will definitely make monitoring them a bit easier. Thanks for the info Kevin!

Yesterday (2/10), Glendale PD was on scene with a guy wanted in Yavapai county on sexual assault charges. They deployed the robot and then indicated they were going to distract him and spray him with OC and deploy "The Hand of God". Anyone have any idea what this is?

On another note, I commented to myself that "he's going to shoot himself" when the cops said they were going to rush him...

"We're going in 3.....2.....1...."
Silence

"We need a medic, shots fired".

Turns out the guy did shoot himself. Apparently, this incident was going on since 5 am Sat. and the cops took action at around noon. Nothing in the news or paper to indicate whether he lived or not.

Anyway, if you guys can tell me what the Hand of God is (in the police vernacular!!), I'd appreciate it.

Tim

1048. RE: [ArizonaScanner] Equipment question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-11 21:10:00 UTC
From: Michael Todd
Topic: 1046 Message: 1048

Greetings
I was at this scene from about 4am. Covering it for various TV Stations as
a Freelance photographer.
the hand of god is a robot that is owned and operated by the US AirForce.
It is literally a robot with a very large and solid steal hand. It
essetially moves up to the victim and in a split second the "hand of God"
waylays the suspect and knocks him down and into another world. Which
gives the pd units time to get the victim in custody. This thing strikes
you hard and fast enough that anything in your hand goes flying.

At news time the PD had not released whether the suspect had died or not.
He was critical on the scene, but since it took Air-Evac 15 minutes longer
than they said it would to get to the scene, the FD decided to go by ground
to JCL-NM Hospital.

The hand of God was reported to also have a good size water canon on it
that they often use to spray someone down to the ground. They say the
stream of water it puts out is similiar in strength to the bean bag guns.

It was quite the seen to see unfold.

Mike,

Don't you think it would be better if they sent this "Hand of God" up to the perpetrator of the crime, rather than the victim?

OOOOPPPSSS!
I guess I should have read what I wrote a bit closer!
INDEED THEY DO SEND IT TO THE PERP and not the victim.
Wow talk about a PR nightmare!
I actually think i typed that because one of the officers was explaining it to me, and actually said the same thing I typed by accident.

I appologize. After the guy shot himself they began to refer to him as the "VICTIM" instead of the perp.

I appreciate you correcting me!

Phoenix Fire was doing quite a bit of pager testing this morning.
Maybe they were testing with Buckeye, Buckeye Valley, and/or Gila
Bend? The dispatcher never said whose pager's they were testing. Just
"Pager Test".

The pager tests were for Buckeye Fire and Buckeye Rural Fire, later they announced on Fire 1 that both departments were new 17th and 18th departments to join the system. Now just a matter of determining what frequency/channel they will respond on and waiting for Gila Bend FD to come online also. Anyone know if Chandler is still going to make the transition to the Phx CAD?

1054. Youngtown/El Mirage?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-12 22:34:47 UTC
From: kb7mib@hotmail.com
Topic: 1054 Message: 1054

I drove through Youngtown this morning. Went by the police station, and saw a pair of cruisers' parked there. One was marked, the other plain. They both had an UHF antenna on the trunk lid. I was also listening to 453.275 and 460.250. It seems that El Mirage is using Youngtown's channel as a car-to-car channel now. One officer wanted to go car-to-car with another on channel 2, (which I assume is simplex of 460.250) but the dispatcher told them to go to "Youngtown". They showed up on 453.275. It is a repeater, as I could hear one officer on the input at 458.275. I heard several other references to the "Youngtown" channel, and other car-to-car talk by officers. I also saw a 'low-profile' (no lightbar, but with regular markings) El Mirage unit headed towards the Youngtown PD station as I was leaving the area.

So, in light of all this, I figure that Youngtown and El Mirage have consolidated their radio channels for use by both departments. Maybe Youngtown didn't want to, or couldn't afford to, switch up to the trunked system that Surprise now uses. Still haven't heard anything on 453.975, which is also listed as belonging to Youngtown according to both the FCC and PerCon, and the SWFD.

And where in Youngtown is the DPS sub-station located? In the Youngtown PD? Didn't see any of their crusiers around the area.

John.

Okay, I'm only counting 17 departments. Who am I missing?

1. Avondale
2. Buckeye
3. Buckeye Valley
4. Daisy Mountain
5. El Mirage
6. Glendale
7. Goodyear
8. Guadalupe
9. Laveen
10. Peoria
11. Phoenix
12. Sun City
13. Sun City West
14. Sun Lakes
15. Surprise
16. Tempe
17. Tolleson

And in what actual order and on what dates did they join with
Phoenix, anyway?

John.

Chandler Fire will be the 18th.
Its a done deal, just waiting for things to switch over.
They were actually switching over before buckeye was, but have not made the
final switch yet.

Thats the best I can offer up as a possible solution

TRUNKED RADIO SYSTEM: He said that he wants a "modern trunked radio system". This was tried in Australia with disastrous results. This type of radio system, when busy, makes you wait in a queue until it feels that the time is right for your transmission. This system can work very well for garbage pickup and road maintenance crews, but it has no place in emergency services. The following was copied from an Australian firefighters' discussion about trunked radio systems on the FireNet bulletin board at: www.anu.edu.au/mail-archives/firenet/firenet9712/

"We suffered so many lockouts, many of up to 5 minutes duration, that it became an absolute farce. Once we telephoned FireComs to advise them we were responding since the radio was continually locked out. This didn't just affect us, it happened to most of the brigades in my area (Gosford) and also was endemic in Sutherland last Tuesday. Even without major fires running all over the place, GRN (Government Radio System) is, at best, unreliable. Saturday we had 11 brigades responded to a major fire on the border of our

When Chandler makes the switch, will their radio channels switch with them? If so, how will they be integrated into the system? (What channel numbers?) I suppose they could just add their channels from 11 on up. I saw that Buckeye/Buckeye Rural did just that, eliminating Phoenix channels 11 and 12. What about non-Buckeye area units responding into Buckeye to assist them? For example, on what channel would Engine 40 or Engine 171 communicate with Engine 312, if 312 is already on 154.085 or 154.980? How many different radios and radio configurations are there going to be?

I believe chandler is using blue deck 1 and 2, Buckeye/Buckeye Valley will
use Blue deck 12 . The Blue deck configuration seems to be rapidly changing.
And as I understand it, 154.980 will not be used for any tactical use
anymore...

Kevin,
Any further news on Harquahalla and Tonopah being dispatched by
Buckeye and would they utilize the old fire frequency 154.980?

Not sure about the channels/
I would presume they would dispatch chandler on PhxFD1 and run most their stuff on ch8 just as they do now when chandler goes into phx.

I dont think that Phx channels 11 and 12 have been lost.
I would imagine that phx units will slowly get the channels in the radio, and in the mean time Mutual Aid Ch4 154.280 works pretty well. Everyone has that channel!

That's the rumors we are hearing. Tonopah was supposed to be up Feb 1, but
haven't heard Ofiicially

1073. Re: Apparatus Numbering/Radio Configuration

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-13 20:56:56 UTC
From: kb7mib@hotmail.com
Topic: 1028 Message: 1073

Michael, by eliminating, I was referring to another post that stated that the channel configuration for Buckeye/Buckeye Valley would be:

1-10 Phoenix current programming
11 Gila Bend 155.055 Repeater
12 BVRFD 154.085 Repeater
13 BVRFD 154.085 Simplex
14 BVRFD 154.415
15 Buckeye 154.980
16 NOAA 162.550

So, it would appear that Buckeye/Buckeye Valley would be using 16 channel radios, and the Phoenix's channel 11, 154.025 Accountability and channel 12, 155.775 HazMat would not be programmed into their radios. This may have changed by now.

You know, if Phoenix would add another mobile radio to their apparatus with the PD channels in it, just as Glendale has done, they could free up 3 of the Blue Deck channels. Personally, I think all the FD's should have a PD radio in all their apparatus, or at the very least the battalion chief units, for better instant co-ordination.

John.

Rescue 351 just came up on Blue Deck 12 (as R351). They are transporting to St. Joe's, Code 3. They also told alarm that if CAD isn't accepting R351, to try R381. There seems to be some question about that still. (This according to R351/381.)

1075. Re: Apparatus Numbering/Radio Configuration

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-13 22:10:44 UTC
From: kb7mib@hotmail.com
Topic: 1028 Message: 1075

Some thought about my post on eliminating the PD channels. If everyone had the same 24 channel radios, I figure they could keep the 'A' deck configuration the same. The Blue deck configuration could look something like this:

154.430 154.130 100.0 Hz Ch. 1 Chandler/Sun Lakes Tactical Repeater
155.955 155.715 100.0 Hz Ch. 2 Chandler/Sun Lakes Tactical Repeater
154.340 159.015 167.9 Hz Ch. 3 Mesa/Gilbert/Apache Junction Tac Rptr.
154.235 159.045 167.9 Hz Ch. 4 Mesa/Gilbert/Apache Junction Tac Rptr.
153.950 159.135 167.9 Hz Ch. 5 Mesa/Gilbert/Apache Junction Tac Rptr.
154.085 155.805 173.8 Hz Ch. 6 Buckeye/Buckeye Valley Tactical Rptr.
155.055 153.965 ? Ch. 7 Gila Bend Dispatch + Tactical Repeater
154.160 156.045 114.8 Hz Ch. 8 Rural-Metro East Tactical Repeater
155.385 150.790 114.8 Hz Ch. 9 Rural-Metro West Tactical Repeater
154.175 159.300 162.2 Hz Ch.10 Wittmann Dispatch + Tactical Repeater
154.085 154.725 ? Ch.11 Ft. McDowell Dispatch + Tactical Rptr.
155.745 150.805 192.8 Hz Ch.12 Black Canyon City Dispatch + Tac Rptr.

They could then release all the simplex-only channels, like A.J's 154.325 and 154.295, Buckeye's 154.415 and 154.980, Chandler's 155.955 and 155.865, Mesa's 154.010, etc., back to the Public Safety pool. Since 'A' deck channels 11 and 12 aren't monitored by Alarm, (correct?), they could be used for miscellaneous car-to-car communications if needed.

Basically, I'm just thinking out loud here. I don't expect anyone to actually implement this idea, or anything close to it.

Well its 3:30 am and let me just say that those boys in Buckeye are BUSY
LET ME SAY BUSY!

All night long all I have heard is super high pitched tones for the far
west boys.

In fact, I heard an interesting one

Buckeye Valley Reserves, Batt 381??? (hope i got that number right),
Southwest Ambulance and Rescue respond to a rollover I-10 Milepost 91.

I guess its merely interesting that I heard them say Buckeye Valley
Reserves - I was curious how they were going to do that!

Mike

1080. Scanner problem...?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-14 13:31:19 UTC
From: T. Weaver
Topic: 1080 Message: 1080

I have a BC Trunk Tracker 235XLT. I live in Glendale (North). I have programmed in the 12 channels listed for GPD in the 1998 SWFD. I listen to all sorts of neat GPD radio traffic.

Except for about every 3rd day.

Then, for some reason, I can't lock onto the control channels and it won't track...so I have to go into regular scan mode and get all those van drivers, garbage dudes, etc. Really frustrating.

I manually thumb through each channel and I can hear the control...it's usually (I think) when the control channel changes to 858.4375 from the others...are there two control channel working at one time?? Sometimes when I scroll through, it seems as if the 858.4375 and 856.2125 channels are actie for the control. Some days, it seems like only one...like this morning (2/14), but everything works fine.

TIA,
Tim

You might try to reprogram 858.4375 back into the radio making sure that
you are in trunk program mode when you enter it. I suspect that maybe one
or two channels in your system did not get programmed that way. Might be a
good idea to reprogram all the channels in the system just in case.

Believe I see your problem Tim. You should only have 10 channels programmed in for Glendale. They use only one control channel at any one time. Since they've been truncked, I've only noticed the channels listed below as the ones they cycle as the control CH every 24 hrs. Hope his helps. I live in South Glendale. There was some good traffic last Saturday morning, . .hope you were able to listen without any problems then? Happy scanning,

Dave, kk7re

and in regards to tonopah fire being dispatched by buckeye police, I heard they (buckeye) are retooling the vhf radio to transmit on 154.325 . still not 100% confirmed.

Interesting, wonder if they are possibly adding that frequency to the
existing 154.980 or replacing the existing frequency.

I understand public works will still use 154.980, they added a transmitter
today for tonopah..

Kevin,
Very cool, thanks for the information. I put the frequencies for
Tonopah in the scanners and will wait to hear them. Correct me if I am
wrong, but before Tonopah closed up shop (next to Ruth Fisher School) when
their funds ran out weren't their rigs numbered in the 300 series 370's or
something?

As I remember, 340's perhaps? They should be up any time now, the antenna
went up on buckeye's tower this afternoon. It's the yagi about halfway up.

Just heard Buckeye PD do a pager test with Station 341 on 154.325, not sure if that is Harquahalla or Tonopah. The signal was rather week and scratchy, maybe they still have some tuning to do on the transmitter.

With all this moving around, what's the full list of Valley Apparatus Numbers look like?

This is what I have: Please fill in any blanks that you can ....

Begin	End	Department	Dispatch Agency
1	99	Phoenix	PFD
101	109	Sun City West Fire	PFD
111	119	Laveen Fire	PFD
121	129	El Mirage Fire	PFD
130	139	Sun City Fire	PFD
140	149	Daisy Mountain Fire	PFD
150	159	Glendale Fire	PFD
160	169	Tolleson Fire	
170	179	Avondale Fire	PFD
180	189	Goodyear Fire	
191	199	Peoria Fire	PFD
201	229	Mesa Fire	MESA
230	239	Sun Lakes Fire	PFD
240	249	Guadalupe Fire	PFD
250	259	Gilbert Fire	MESA
260	269	Apache Junction Fire	MESA
270	279	Tempe Fire	PFD
280	289	Chandler Fire	???PFD??
290	299	Salt River Fire	SALT RIVER PD
301	309	Surprise Fire	SURPRISE PD
311	319	Buckeye Fire	PFD
321	329	Buckeye Valley Fire	PFD
331	339	Black Canyon Fire	
341	349	Tonopah Fire	
351	359	Palo Verde NGS Fire	
381	389	Gila Bend Fire Fire	RMFD; EMS:PFD
808	819	Scottsdale	RMFD

Tolleson FD is dispatched by Phx
Goodyear FD is dispatched by Phx
Chandler FD is dispatched by Chandler PD (I think) soon to be Phx
Surprise FD is dispatched by Phx
Tonoapah & Harquahalla are being by dispatched by BuckeyePD (so it sounds like anyway)
Youngtown Fire service is provided by Sun City I believe
WhitmanFD dispatches themselves as far as I can tell
PVNGS is dispatched by the plant
Circle City fire service is provided by Rural Metro or Wittman
I believe Ft McDowell & Gila River FD's are dispatched by their PD's.

>>
A little of both, 341 is tonopah, and since the paging transmiter is a yagi,
it's very directional. unless your in the footprint of the anntena, it will
be weak.

Youngtown Fire does not have its own fire department. They have a master contract with the Sun City West Fire District fire protection for their city.

Circle City actually has a small fire department but I thinks mostly dispatched via telephone call.

I appologize, Youngtown has a contract with Sun City Fire. I happened to be talking to a Sun City West firefighter on the phone, when I typed that. Sorry for the inconvenience! Youngtown is contracted with Sun City, not Sun City West.

So if 341 is tonopah, what's harquahala valley ?

Who's 35x series? PVNGS ?

Who's 36x and 37x series ?

[Non-text portions of this message have been removed]

I originally thought that Harquahalla was the 340 series, PVNGS was the 350 series & Tonopah was 370 series, but its been a while since I have seen any of those dept's so things may have changed since then.

Fort McDowell is the 400-409 Series...currently only using 401 & 402 ....
Repeater is up and running on only the dispatch channel....repeater was
installed on a local hilltop so the coverage is not so great....can anyone
hear it?

1100. Entity/Agency Coordinating Apparatus Numbering System

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-16 04:40:22 UTC
From: d952@mohaveaz.com
Topic: 1100 Message: 1100

Is there one central entity/agency for which the valley's 42+ fire dept's must submit/subscribe to a numerical system as currently being discussed on this board? If so, would someone be able to contact that entity/agency and ask for and post a current copy of the corrected numbering sequence for each dept {even though it may only be proposed until all fire dept's have signed on to accapt it}?

Thanking you in advance
Danny McLean

Hi All,

My wife works in the communications department for DPS as a Dispatcher/Trainer and said that this codes were totally wrong. If any of you would like the official codes, let me know and I will have her type them up or I will and send them to you.

I believe most of the information we have already posted is correct. Having the correct number series for the few rural FD's is just a matter of time until someone actually spots one of their rigs or hears them dispatched on the radio. With the group of people that we have subscribed to the list, I have no doubt that our information is pretty accurate.

I had no doubt that the listing was accurate, I just thought perhaps it might be nice to maybe have some official authority confirm what what the kool intelligent folks on this board already know.

Thsnks

Danny McLean

BTW can anyone state w/certainty if there are any volunteer fire dept's mixed in among the carer dept's in the Valley?

Trivia Q of the day: Who can name the two volunteer sta's {independant of Cnty or City fire} in Los Angeles Cnty today? Yea I know, hard to believe volunteer's are still active in that major Metroplex.One of them has five {5} stations

Well the real problem is that half of the time we have more accurate information than the agencies themselves. I understand the desire to have information directly from the source, but many times that is outdated and incomplete. However if anyone has a list it might be interesting to see.

Sorry I missed this part.... I know Buckeye Fire & Buckeye Rural have both Paid and Volunteer members. Wittman I believe has both as well as Gila Bend. A lot of the small departments can only afford to staff a couple of FF/EMT's or Medics and have to rely on the volunteers for the rest. Hope this helps.

1106. Phoenix FD - Use of Ch2 + 3?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-17 18:22:04 UTC
From: zerg90@webtv.net
Topic: 1106 Message: 1106

Could someone tell me how and when Phoenix FD makes use of Channels 2 and 3? If they get dispatched to a house fire on Channel 6, and it turns out to be a major fire, do they make an announcement that "units now should switch to Channel 2" - or something like that?

Or - does this never come up? Do major incidents always get sent to Channel 2 upon dispatch? (I have never heard a box dispatched when listening to Phoenix FD online.)

Thanks alot -

Peter S - Arlington MA

1107. Re: [ArizonaScanner] Phoenix FD - Use of Ch2 + 3?

From: Charles Simmont
Topic: 1106 Message: 1107

Channel 2 is usually used for violent incident staging. When the FD responds on a domestic situation, shooting, etc, they will stage a safe distance away and the Alarm room will advise them on Ch2 when it is safe to go into the scene. Channel 3 is mostly used for helicopter landing zones for medical calls. Most of the call boxes in Phoenix were removed years ago, there are still a couple located in the city (one being in the control tower of Sky Harbor Airport).

Maybe I should rephrase my question. What Channel does Phoenix use when they are fighting a major fire? Lets say that the fire is downtown. What Channel would they respond on, and what Channel would they fight the fire on? Would they be dispatched on Channel 1 - respond on Channel 5 - fight the fire on Channel 12? Or would they just stay on Channel 5 for the whole fire after being dispatched on Channel 1?

Phoenix dispatches all calls on Ch1, then the responding units are assigned
a tactical channel according to the area they are responding to. For
example a high rise fire in downtown would be assigned Ch8.

OK - thanks very much for the info. That makes sense.

If they are working a highrise fire downtown on Channel 8, then any subsequent calls in the downtown area would have to be assigned to a channel other than Channel 8.

Thanks very much - that clears up that question.

When I was listening online to Phoenix earlier (via the Phoenix Central feed) I was able to catch 2 items of note (to me at least).

The ?Air Evac Dispatcher was talking to "Air Evac 12 Medic". I guess that would be the portable radio used by the medic on the helo.

Also, there was a announcement on a couple of channels that "XXX Memorial was down for trauma" which I interpreted to mean that some hospital was closing its ER to trauma cases. In the Boston area you hear the same type of announcements - they just use slightly different wording - "MGH is on trauma divert".

Have a good day -

Peter S - Arlington MA

They will usually work a couple of calls on the same channel
if they aren't major incidents. They will usually keep a channel restricted
for calls that are a 1st or 2nd alarm or more. It all depends on how much
radio traffic they have and if there any other channels available.

There are usually 3 people in the med helo's, the pilot, flight nurse, and
the medic. They do carry portables for when they are out of the aircraft,
but when they are on board they wear headsets.

Yes thats right, sometimes they will say "divert" or "bypass". Basically
all the same thing.

1112. RE: [ArizonaScanner] Phoenix FD - Use of Ch2 + 3?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-17 21:30:43 UTC
From: Dan Rollman
Topic: 1106 Message: 1112

Hi Peter,

Your second and third notes (AE12 Medic and "down for trauma") are exactly correct.

Also, although Ch2 is used routinely for violent incidents, and Ch3 is used routinely for landing zones, these two channels have a couple of "special" uses also.

On occassion, if Ch3 has lots of heavy traffic on it (several large accident scenes in the city with multiple helicopters landing at various LZ's, all around the same time), Ch2 may be used as a back-up landing zone channel if yet another incident requests a helicopter. This is to keep congestion down on channels used for critical life-safety communications like safely landing a helicopter. This is rare, though.

Another use for Ch3 is for "tunnel calls". This refers to the tunnel I-10 runs through under a portion of downtown Phoenix. Although this portion of the city lies in Ch8's regular tactical channel area, there is no receiver for Ch8 inside the I-10 tunnel. Since often times you can't hear units a ways outside the tunnel while you are in the tunnel working a wreck or fire or whatever, Ch3 is used in the tunnel. In fact, both Ch3 and Ch2 have receivers inside the tunnel, so Alarm can hear units inside there just fine. And Ch8 can continue to be used for other downtown incidents outside the tunnel, without interferrence.

Also, regarding your question about "major fires". When an incident goes to a 2nd Alarm (about 10 engines and 5 ladders be assigned at that point, plus lots of special units) or greater, a "staging" channel is put in place. I'm a frequent Boston traveler myself and enjoy listening to Boston FD while I am there, but I am not sure if they use the "Level-2 staging" concept or not. Level-2 staging means that incoming units that do not currently have an assignment from Command, stage at a designated location a few blocks from the scene (usually a church parking lot or something like that). (Level-1 staging would mean they stage right at the scene itself). Level-2 staging keeps unneccessary congestion down at the scene. When this practice is done, 2nd Alarm (and above) units respond on Ch3 "Staging". A "staging officer" communicates on Ch3 with units incoming to staging, as well as with Command. This way, the units enroute to staging that don't even have an assignment yet, can communicate with the staging officer without interferring with fireground (interior) communications.

Also, Ch11 and Ch12 are often used on large fire scenes for special purposes. For example, the Public Information Officer, Resource, Accountability, Safety, or other positions may use Ch11 and/or Ch12 for a more private channel to talk to Command and eachother.

Needless to say, on these large fires, this means the Command Post (usually in, or moving to the Command Van by this time) needs several people helping out with the various radio channels, not a single Batallion Chief working the radios. That is a large part of the reason why so many Batallion Chiefs are assigned on multiple alarms. (The new dispatch for a "2nd Alarm Brush Fire" for example now gets <6> additional BC's, in addition to the <2> that would already be there from the 1st alarm).

So, on a major fire (using the downtown example), you could have:

Ch8 - Primary Fireground (firefighting operations)
Ch3 - Staging (units not yet assigned)
Ch11 - Accountability & Safety
Ch12 - PIO / Other resources

Sorry for the "novel", hope it helps to understand some of the "exceptions". :-)

Subject: Re: [ArizonaScanner] Phoenix FD - Use of Ch2 + 3?

OK - thanks very much for the info. That makes sense.

If they are working a highrise fire downtown on Channel 8, then any subsequent calls in the downtown area would have to be assigned to a channel other than Channel 8.

Thanks very much - that clears up that question.

When I was listening online to Phoenix earlier (via the Phoenix Central feed) I was able to catch 2 items of note (to me at least).

The ?Air Evac Dispatcher was talking to "Air Evac 12 Medic". I guess that would be the portable radio used by the medic on the helo.

Also, there was a announcement on a couple of channels that "XXX Memorial was down for trauma" which I interpreted to mean that some hospital was closing its ER to trauma cases. In the Boston area you hear the same type of announcements - they just use slightly different wording - "MGH is on trauma divert".

Have a good day -

Peter S - Arlington MA

The other day I thought I may have been hearing things, but wasn't sure....
Heard R381 (from Gila Bend) and E161 (from Tolleson) get dispatched on a
call in Gila Bend. Why would this be? The only reason I can think that they
sent the engine was for ALS, but I know there were units from Buckeye and
Buckeye Valley FD's available. Then today I heard R381 and E181 from
Goodyear get dispatched to a similar EMS call. Once again why would they
have dispatched a engine company when the Rescue would have arrived on
scene and transported the Patient by the time the Engine arrived. Excuse
my ignorance, but this is just not making any sense to me.

I will assume this is an error in the script for CAD. this is a work in
progress, and is continuously being tweaked. Unfortunately, its also a Monday
thru Friday operation.

Hi! Thanks for getting the coffee beans and if you don't mind go ahead and grind them for me. I am going to send the french roast to you at work. Hope that's ok, if not let me know because I'm going to have Karla mail it out Monday. I had quit having the hot flashes but they seem to have come back. I'll have to wait and see if my periods are going to wack out again or not. I need to make an appointment next month for a pap smear anyway. We had a good Valentines Day, how was yours? Next Friday Steve and I are going to ride the railroad to the canyon and spend the night and come back on Saturday for my birthday. We got a cabin on the rim with a partial view of the canyon. On March 24th we are going to Vegas to meet his sisters. We are going up on Saturday morning and coming back on Sunday evening. They are staying until Tuesday but we have to be back to work on Monday. We are also going to try to go to Mojave Lake to do some fishing if we can. I think it's a good idea to go to school for interior design. You always were real good at art and I think it will work out really well for you. Tell Al and everyone we said hi! Take care and we'll see you later. Love Carol

From: kb7mib@hotmail.com
Topic: 1119 Message: 1120

Don't recall where I saw it, but there is a rumor floating around
that the next trunktracker will be a handheld version of the 780,
possibly with digital capability. It is supposed to be a 500 series
number, not a 755. Like I said, it's just a rumor right now. Only
Uniden would know for sure.

I just wish I still had my 735.....

1121. RE: [ArizonaScanner] Phoenix FD - Use of Ch2 + 3?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-18 16:18:57 UTC
From: zerg90@webtv.net
Topic: 1106 Message: 1121

Dan - thanks a million for all the info. Of course now I have to wonder - how many receiver sites does Phoenix FD have on the various channels? And how many transmitter sites?

From looking at the FCC website, I think I saw that Phoenix FD has about 7 transmit sites for the dispatchers. Plus, each fire station is licensed for a base station. I am assuming that Phoenix is generally flat except for the downtown highrise district, and 1 north mountain, and 1 south mountain. So the dispatchers probably bounce between those 3 transmit sites (on Channel 1 at least).

I am guessing that Phoenix FD dispatchers can hear the portable radios from just about anywhere in the city. Maybe a few basements downtown might be a total dead spot.

Boston FD does not use the Level 1 and Level 2 staging - AFAIK. Some of the suburban FDs do mention Level 1 staging on the radio once and a while.

And yes - it is about 10 degrees outside today. Or at least it feels like 10 degrees. I feel sorry for you guys having to put up with those balmy 60s and 70s :-)

1122. RE: [ArizonaScanner] Phoenix FD - Use of Ch2 + 3?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-18 19:53:20 UTC
From: Dan Rollman
Topic: 1106 Message: 1122

Hey Peter...

As best I know, "every" (or nearly every) Phoenix fire station, and most of the suburban fire stations have <3> or more receivers located in them. Each has Fire Ch1 (Alarm), the areas primary tactical Channel, and the "back-up" secondary tactical channel for that area, which is simply a neighboring areas primary channel. For example, on the West side, Ch9 is use for SW Tactical, Ch6 is NW Tactical. So the stations out there have both 6 and 9. When a major fire occurs on the SW side and Ch9 is closed, traffic in both areas can safely use Ch6. The reverse is also true. Each of the tactical channel areas on the Phoenix FD system has an "alternate" tactical (on of its neighboring areas primary tactical).

Phoenix is fairly flat, but does have a good bit of funny little "bumps" (many call the Mountains, like Camelback Mountain, Squaw Peak, etc.) that pop up in the middle of the city. These can create issues for hearing communications in distant parts of the city, which is why there are so many remotes (just about every fire station) and transmitters.

And with regard to your weather comment... I'm currently wearing shorts and a T-shirt and on my way out the door for a bike ride on this beautiful sunny day, although I will have to dawn the sweaters and heavy jacket this weekend in Boston. :)

Hope others have found the discussion regarding Phoenix FD Ch2 and Ch3 helpful!
Peter, feel free to email me privately if you'd like any more in-depth specifics on this topic and we'll free up others email boxes for now. :)

Dan

1128. trunk Trackers

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-19 15:59:25 UTC
From: Michael Weaver
Topic: 1128 Message: 1128

So, what's the difference between the 780 and the 845? They're both desk-top TT scanners, right? I know the 245 is an upgraded version of my 235. I was thinking of something for desktop use. Also, any URL's for radio houses that sell scanners at reasonable prices??

thanks,
Tim

The 895 desktop trunktracker can do Motorola and EDACS tracking. The 780 can do Motorola, EDACS and LTR tracking. Lots of cool bells and whistles that the 895 can't do.

The 245 and the 895 are basically the same. Being bigger, I think the 895 can do a few things the 245 can't. (Don't have either, so I can't tell you exactly.)

I had a 235, but it was either lost over in Chandler when I left a music festival back in Oct./Nov., or it was stolen that weekend by a friend or friends of my brother. (I had it with me at the festival. I could have sworn I had it when I went by Mill Ave in Tempe on my way home. I didn't use it the rest of the weekend. It was gone Monday morning when I got home from work.)

1130. Constables

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-20 06:41:54 UTC
From: kb7mib@hotmail.com
Topic: 1130 Message: 1130

Can anyone give me, or point me in the direction of, information on constables, and what their authority/powers are here in Az? I've seen several websites for constables in other state's, and besides handling court orders and the like, they also have full law enforcement powers, much like the county sheriff's. They even provide (mostly by private contract) patrol services to sub-divisions, complete with K-9, and bicycle officers, and full communication centers.

Here are several links to constable's websites. I've seen many more than what I have listed here. The first two are in Pennsylvania, and includes a detailed history of constables, and their duties in Pa.:

1131. RE: [ArizonaScanner] Re: trunk Trackers

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-20 07:46:43 UTC
From: Dan Rollman
Topic: 1128 Message: 1131

Hey Tim,

Here's a brief feature breakdown for you:

245: Handheld, 300 channels
895: Older, larger base, 300 channels
780: Newer, smaller, base or mobile use, 500 channels

Motorola Trunking: 245,895,780
EDACS Trunking: 245,780
EF Johnson / LTR Trunking: 780
Military Band Coverage: 895, 780
TrunkTrack I-Calls, Private Calls (direct trunked radio to radio): 780
TrunkTrack Motorola phone patches: 780
Alphanumeric channel & bank labels (2-lines): 780
CTCSS (PL) decode / scanning: 895, 780
Digital PL decode / scanning: 780
MultiTrack (trunk multiple systems, or conventional AND trunk banks, at same time): 245, 780
Alphanumeric labels for trunked banks and talkgroups: 780
SAME WX decode / FIPS codes (will say "flash flood warning - Maricopa County" right on the screen as it plays weather alert, etc.): 780
Auto record on / off: 895, 780
Record on/off selectable by channel/talkgroup: 780
PC programming & radio control: 245, 780, 895
Auto reverse on UHF (when on 460.400, hit "RVRS" to switch to 465.400 input): 780
Screen dimmer: 895, 245
Screen Mask Feature (will show only "PHOENIX FIRE CH1 ALARM" on screen, no frequency, etc., if you want it to: 780 only
Variable Delays (none, 1 sec, 2 sec, 5 sec, 10 sec, infinite - stay forever, -10 delays up to 10 seconds then resumes, etc.): 780 only
Variable Beep Alert by channel: 780 (will beep twice when certain channels important to you are active)
Variable Trunk "status bit" on off feature (whether to interpret special talkgroup codes like emergency mode, or ignore them): 245, 780
Control Channel Only trunking (know and program ONLY the control channel, and it will trunktrack the whole system): 780
Programmable "search events" (save "VHF Federal" or "2 meter ham" or "aircraft") and you can pick your own programmed ranges to search): 780

You'll notice one trend above. The 780 does everything, except fit on your belt like the 245, or cost under $200 new like the 895. :)

Hope that helps.

Subject: [ArizonaScanner] Re: trunk Trackers

The 895 desktop trunktracker can do Motorola and EDACS tracking. The 780 can do Motorola, EDACS and LTR tracking. Lots of cool bells and whistles that the 895 can't do.

The 245 and the 895 are basically the same. Being bigger, I think the 895 can do a few things the 245 can't. (Don't have either, so I can't tell you exactly.)

I had a 235, but it was either lost over in Chandler when I left a music festival back in Oct./Nov., or it was stolen that weekend by a friend or friends of my brother. (I had it with me at the festival. I could have sworn I had it when I went by Mill Ave in Tempe on my way home. I didn't use it the rest of the weekend. It was gone Monday morning when I got home from work.)

1132. RE: [ArizonaScanner] Constables

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-20 07:55:30 UTC
From: Dan Rollman
Topic: 1130 Message: 1132

Tim,

You'll find the Maricopa County Constables webpage at
http://www.maricopa.gov/constable/default.asp
This info should help: "The mission of the Constables is to provide execution of mandated civil and criminal process to citizens of Maricopa County so they can receive timely, cost effective and professional service." Essentially, court services.

Among pages and pages of other new information that will be include in the SWFD Phoenix Metro Guide and 6th Edition UPDATE booklet due out around the end of this month (we're sending it off to the printer on Monday!) is a new, exhaustive list of Maricopa County trunked talkgroups. Include in that new list, you'll find the Maricopa County Constables listed on talkgroup 336, on both the White Tanks and Thompson Peak towers. Check SWFD-6 Page 74 for the frequencies.

Also found an interesting state senate bill (#1441):
"CONSTABLE SALARIES
In precincts having sixteen thousand or more registered voters, the salary of constables is increased from not less than $36,810 nor more than $44,170 to not less than $48,294 nor more than $55,654. A joint legislative committee is created to review current methods of setting constables' salaries to determine whether it is an appropriate measure of a constable□s workload; review possible alternative methods of establishing salaries; review the job duties of constables; review the feasibility of eliminating constables in favor of using sheriffs or private process servers to perform a constable□s duties; and, review the process by which justice precincts are drawn."

So while they give them a raise, the senate also wants to look at eliminating them.

From: kb7mib@hotmail.com
Topic: 1130 Message: 1133

Thanks, Dan.

I'll have to go find the A.R.S. section on their duties, but it looks like they don't have criminal law enforcement powers that constables in many other states have. I assume they aren't armed, either? It seems strange that they wouldn't be, considering it seems that most constables across the country have the same powers as police/sheriff's do, but with the added powers of civil law enforcement. From the Denton, County, Texas Precinct Two Constables' website:

"Duties of the Constable.

The Constable and the deputies have all the powers and responsibilities of any peace officer in the state. They may write tickets, make arrests, conduct investigations, and file criminal charges. However, they have additional enforcement responsibility that regular street police officers are not charged with. The Constable and his deputies have the additional responsibility of serving and executing Civil Court orders."

"How do Constables Differ from Police Officers?

Constables differ from police officers in that they have the added responsibility of civil law enforcement, while still exercising the same powers as police officers."

And in many cases, it seems that Constables are paid only by the fees that they collect from serving papers. They don't get a salary. At least in the New England states, this appears to be the case. Not sure about Texas.

John. (Not Tim. :->)

Southwest Ambo just got the call. It's an ill person. Location a couple blocks south of 9th Street and MC 85. (AP 97 gave the responding one (A 91?) the directions. Kinda convoluted. I-10 west to Miller Rd, then south to MC 85. Back east ~6 miles to 9th St., then south a couple of blocks. They closed with "Good Luck".) They are responding on fire channel 18, (Blue Deck 12, 154.085 I assume) and their own channel 12, 460.550.

341 is Tonopah Fire normally dispatched by BuckeyePD on 154.325. Heard them get a call on a rollover at about 355th Ave & Indian School, Phx Alarm toned them out only, then later dispatched B328 (Buckeye Valley Fire) and BC171 (Avondale).

The call was in Buckeye. Buckeye Fire normally uses the Fire District for its EMS transports, however when none of their ambulances are available they will call Southwest. AP97 & AP98 are the two ambulances that normally run out of the Avondale/Goodyear area and respond to incidents for Buckeye Fire & Buckeye Valley Fire when requested. No idea why 341 got that call though.....

It was E341 , as Buckeye Valley is the CON holder for ambulance service from
basically Citrus Road west to m/m 60 point something in Lapaz County, and
Southwest has an overlapping secondary CON (the old Amevac) that covers the
Goodyear, Avondale and Buckeye.
Southwest is, I understand, listed as our backup to the BVFD CON.

Please don't take this discussion private too soon ...

I learned a lot about fire comms from this discussion .. I, too, occasionally travel to Boston (Maynard) on company business and appreciate hearing about that too.

And I have a question for you fire radio buffs --

I was riding with MCSO unit G-234 this past Saturday; we were around the Gillespie Dam area on old US 80 north of Gila Bend, and I was observing signal strength of the 800MHz system in this area. The White Tanks zone transmitter gets blocked by a local mountain, and so does the Oatman zone transmitter. Occasionally, Yarnell (yes, Yarnell NW of Wickenberg !!) sneaks in, but the area is mostly a dead zone.
MCSO is pretty much out of luck; even the 150-MHz Search-8 channel is blocked because it's on the same towers.

I got to wondering about Gila Bend, Tonoaph, and Buckeye Valley fire being dispatched by Phoenix Fire; PFD has not previously had a reason to have towers in this remote area.

Did they add some? For which channels? A-1 and B12/13 ? Where are they? How do they cover Gila Bend now ?

To my chagrin, I asked for Gila Bend Rescue respond to an incident we were on in GB (paint-sniffing burglar caught inside the church residential trailer), but didn't think to ask them about their new radio facilities.

L. W. "Dan" Danz Radio Dispatcher/9-1-1 Operator
Maricopa County Sheriff's Office (MCSO)
Phoenix AZ 85003 USA mailto:L_Danz@...
*Opinions expressed are my own. I do not speak
*for MCSO or any of the staff of MCSO.

Dan, while I was testing our new repeater (B-12), the only real place there was no coverage (with a mobile radio) was the Gillespie dam bridge, south about a mile and a half. By the rear entrance to Robin's Butte area. Gila bend has its problems too, Mainly on it's western response area.

From: jwcooper@u.arizona.edu
Topic: 1143 Message: 1143

Just got a Scout to play with. Works pretty good but....I can get it to download the take with an Icom CT-17 powered interface fine, but can't make it work with the Icom cloning cable or the aftermarked one from RT Systems. This is a real pain because when using a laptop and the Scout on batteries, now you have to come up with some way to power
the CT-17.

The cloning cables use sleeve and ring for data; I have the proper adapter cable to connect to the CI-V sleeve and tip connection. This arrangemet works fine to control the radios from the computer. The Scout does absolutely nothing. Tried talking to Optoelectronics, no help at all.

I haven't had time to really get into it yet, but thought I'd ask if anyone else has ran into this and has a possible solution. Not that powering the CT-17 some way is an insurmountable problem, but it is sure not an elegant solution, like the works in the DB9 plug and a cable....

Thanks for any ideas

Jim

But you already had towers that covered the area for B12, right? What about Fire 1 (Alarm), etc. What are they doing for coverage with it (if anything)?

Did you also test B12 in Gila Bend, and south of Gila Bend beyond Black Gap, etc., in the gunnery range area?

How 'bout Mobile area ? The Estrella Mountains block the 800 MHz pretty good in this area, too.

No, as I wasn't really told that they were going up until the last minute.

>

We did test (while on a transport) B12 on I-8 between the bend, and Casa
Grande, and it did work okay.

Thanks Dan.

It would appear then that they do carry, if they follow the same rules as the sheriff's. Now I'm wondering what their uniform, badge and vehicles look like. :-> I know where the Peoria Justice Court is at 75th and Cactus, maybe I'll check out the area more often to see if I can catch a glimpse of them.

John.

As for the Constable out here in Buckeye, I know he drives a white unmarked vehicle. 1 trunk mount antenna (probably MCSO trunked system?) plain clothes, wears a badge on his belt and carries a sidearm. Just looks like another plain clothes detective unless you know different.

From: d952@mohaveaz.com
Topic: 722 Message: 1148

Thank you to Michael Todd, Charles Simmomt, and Famwiley to name a few for your help w/locations for some of the dept's in the Valley that I was having some difficulty locating. Now for some more Q's.

The two stations in Fountain Hills, are they both located w/n the same community or is one located @ another community {name please}?

The same Q for East Cnty. I have located 1 station in Queen Creek and three are listed for East Cnty. What communities are these three stations located in?

Two stations are listed for West Cnty, 1 in Litchfield Park and the other is where?

Thank You
Danny McLean

Fountain Hills has two stations ...

one at Palisades and Avenue of the Fountains,
the other on Saguaro Blvd south of shea.

There was talk of a third station a while back - I'm not certain
what happened to the discussion.

Fountain Hills used to also do Ft McDowell but they now have
their own FD/Rescue ...

Rio Verde has a station (825) on Forest Rd

855 is actually in queen creek
the other east valley stations are not in a specific "community" but rather located near some larger county islands.

There are two stations in fountain hills that are both part of that district.

Mike

1151. DPS Pursuit

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-22 03:26:17 UTC
From: Charles Simmont
Topic: 1151 Message: 1151

Just thought I'd share a very interesting listen that I had this afternoon. I had my BC780 scanning while I was goofing around on the net and DPS District 4 popped up (460.400 PL 100.0) with an officer advising that "the vehicle has been spiked and the left front tire was hit". Well that grabbed my attention rather quickly and I began to monitor. After listening a little while longer I hear that they are at about Milepost 44 on SR85 at 70mph. The suspect turns off the hwy and leads the officer on a chase on some dirt roads. By then Border Patrol and Pima County SO had joined in the fun with 4x4's. DPS bailed out of the pursuit about the time they got to the Oregon Pipe Nat'l Mt. since he was banging up his cruiser on the bad roads. PCSO and BP chased him for a while and I figured I had lost my listen. I began searching through my programmed border patrol freq's and found 169.450 to have the action. I very soon found out that US Customs is active on this frequency when I heard someone advise that a blackhawk helo was going to assisting in case the guy bailed out of the car. The last I heard they were still chasing the car around the monument land, unknown if they caught him or not, but it was a great chase!

> I began searching through my programmed border patrol freq's and
> found 169.450 to have the action.

Yes indeed, that freq. (M.A.N.T.I.S) is in use a great deal here in Cochise County.... Several Federal (B.P., Customs, Natl Parks, DEA ect) as well as local agency's (CCSO, DPS ect), use it here along the border as a kind of multi-agency "mutual aide" freq. Unfortunatly, the majority of the time the comms are encrypted, but when they are in the clear, it's usually involving some local agency in basically the same scenario as you described (i.e. chase's)... It can be a pain in the butt to have it in the scan list, but it can be well worth it at times!

Charles,

Check KTVK TV3's frequency of 450.350, (Ch. 2, Engineering) DPL of 261. They should be active during the morning, 11am, evening, and late night broadcasts.

The Scottsdale Princess Hotel uses DCS/DPL on at least some of it's UHF channels. Check page 118 in the SWFD.

Mountain Point High School on 462.875, probably simplex, uses 023. 4201 E. Knox Rd., Phoenix. Between Ray Rd. and the Warner-Elliot Loop.

No public safety are listed as using it in the SWFD. Unless there are some in the update.

John.

All of the TV stations, with the exception of KNXV which is trunked, use DPL. Most mall security offices and a lot of other private companies are on DPL.

Motorola systems that go into FailSoft will exhibit that characteristic:
an open carrier with a tone every few seconds. That is probably what you
are hearing.

www.geocities.com/45peter/AZphoenixStations.html

I have put together a list of fire stations in Maricopa County from info I have found around the Internet. I still have lots of question marks.

Note - FPD = Fire Protection District = a taxing district (they might or might not have their own stations and equipment)

If I had more time I could figure out more of the details. But this is the best for now. (I see that I left out Tonopah Sta ?341)

Thanks to all that responded, from what I gather DPL codes are mostly used by businesses and such. Was wondering if any were used in public safety, but I guess they stick to the CTCSS tones instead.

1162. Scanner antenna

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-23 18:01:46 UTC
From: Charles Simmont
Topic: 1162 Message: 1162

With all of the discussion on mobile antenna's, I am currently using a multi band antenna called "The Beast" from Antenna Specialist. Pretty nice 5" tall antenna covers from 100mhz to 1300mhz. From what I can tell preforms about as well as my hand held high gain antennas, just a fraction of the size. They are now selling them for $9.99, reasonable price for what you get. My next purchase from them will be their multi band mag mount antenna to replace my Radio Shack mag mount. You can check out their web site at http://crxsi1986.tripod.com/AntennaSpecialist/

I just had a look at the site.

First, this is NOT the Antenna Specialists that became part of Allen Telecom
and makes antennas for just about everything. (And is used extensively by DPS)

Second, I have a tough time getting past the misspellings and bad grammar.
This guy(?) wants to sell me something? He(?) could be a little more professional.

Third, it's on a personal web page server. Anyone can put a page up like that.
Just my $.02

To Walter Howard:

FIRST, who cares what site it is or isn't!!
Second, maybe the guy isn't on the DAN QUAIL Spelling All-stars, but try to look past the imperfections and to what the site has to offer...I try to look past alot of DPS blunders when I hear them on the scanner (amusement nonetheless)...he's human!

Third: and he did a fair job on his personal WEB page..maybe you can do better for the DPS' WEB site or have you no HTML or XML experience? I have seen some of your other postings and you sure are a negative person...is that something you excelled at the "DPS Academy of Morons"? You sure do talk alot of manure. Take your .02 cents and buy a life or does that constitute "wasteful spending by a state employee"

oh, one more thing...take that stupid disclaimer off the end of your postings, I'm sure DPS and the rest of us won't hold you accountable for your sarcastic opinions!

1165. A note from the ArizonaScanner list operator

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-26 07:46:54 UTC
From: Dan Rollman
Topic: 1162 Message: 1165

(cc'd to the ArizonaScanner community)

To "tcinv1":

The ArizonaScanner mailing list is designed to be an enjoyable place for local radio enthusiasts to share useful information, ask insightful questions, and help other members of our hobby community learn about our hobby. The statement in the footer of every email sent to this list, including yours, reinforces our community's desire that this remain a respectful place for us to share hobby-related questions and information.

The content of the message you sent to the 224 members of the ArizonaScanner email list violates the spirit of this lists policy of remaining respectful and free of inflamatory statements.

In response to the email reply you sent (which is quoted below), and coupled with the 18 (as of this point) separate complaints I have received from other members of the list objecting to your distasteful comments, I researched the past participation of both you and Walter Howard on our list. Mr. Howard has made significant contributions to the list, and I personally have received many emails from people who have found the information on this list, and especially Mr. Howard's DPS-specific information, quite useful. As of this date I have received no negative comments regarding Mr. Howard at all since he joined the list to provide us valuable information from a public safety agency, the majority of us are truly interested in.

In researching your ("tcinv") participation with our list prior to this email, I found that this was only your 2nd email to the list at all since you became a member last year. Your first email was a question seeking information on data communications in Tucson, which I had no problem with. While we encourage hobbyists and anyone interested in the radio scanner hobby in Arizona to feel welcome to post questions and learn from the list without being obligated to teach and share with others, offensive emails that attack an individual here on our list will not be tolerated, particularly from those who do not participate in the list in any other way. It's simply not constructive to allow that to continue on a list that is centered around, primarily, a hobby.

In accordance with the YahooGroups and ArizonaScanner policy on inflamatory, offensive, and disrespectful email, you have been permanently removed from the ArizonaScanner email list.

On a side note. As the list operator, I apologize to Mr. Howard for the comments that were directed at him by this individual. While the original email Mr. Howard sent to the list regarding the website of Antenna Specialists may not have been extremely necessary, the language of Mr Howard's email was neither offensive to anyone on our list or (in my review

of it) innaccurate. I appreciate your (Mr. Howard) input to the list, and hope you'll continue to provide the valuable information we've come to appreciate very much. As anyone who participates in very many email-lists knows, occassionally someone comes along intent on causing problems and offending others while failing to participate at all themselves. Unfortunately these things are part of the Internet and email-lists like this one. But to those who emailed and called me this weekend inquiring as to why content like that would be tolerated on our list, please rest assured it won't be. This has been a great place for hobbyists to gather online for well over a year now, with only a couple of negative incidents, and I am committed to keeping this a respectful place to share our hobby.

Regards,
Dan Rollman
ArizonaScanner List Operator

To: tcinv@...
Cc: Arizonascanner@yahoogroups.com
Subject: [ArizonaScanner] A note from the ArizonaScanner list operator

(cc'd to the ArizonaScanner community)

To "tcinv1":

The ArizonaScanner mailing list is designed to be an enjoyable place for local radio enthusiasts to share useful information, ask insightful questions, and help other members of our hobby community learn about our hobby. The statement in the footer of every email sent to this list, including yours, reinforces our community's desire that this remain a respectful place for us to share hobby-related questions and information.

The content of the message you sent to the 224 members of the ArizonaScanner
email list violates the spirit of this lists policy of remaining respectful and free of inflamatory statements.

In response to the email reply you sent (which is quoted below), and coupled
with the 18 (as of this point) separate complaints I have received from other members of the list objecting to your distasteful comments, I researched the past participation of both you and Walter Howard on our list.
Mr. Howard has made significant contributions to the list, and I personally have received many emails from people who have found the information on this
list, and especially Mr. Howard's DPS-specific information, quite useful. As
of this date I have received no negative comments regarding Mr. Howard at all since he joined the list to provide us valuable information from a public safety agency, the majority of us are truly interested in.

In researching your ("tcinv") participation with our list prior to this email, I found that this was only your 2nd email to the list at all since you became a member last year. Your first email was a question seeking information on data communications in Tucson, which I had no problem with. While we encourage hobbyists and anyone interested in the radio scanner hobby in Arizona to feel welcome to post questions and learn from the list without being obligated to teach and share with others, offensive emails that attack an individual here on our list will not be tolerated, particularly from those who do not participate in the list in any other way.
It's simply not constructive to allow that to continue on a list that is centered around, primarily, a hobby.

In accordance with the YahooGroups and ArizonaScanner policy on inflamatory,
offensive, and disrespectful email, you have been permanently removed from the ArizonaScanner email list.

On a side note. As the list operator, I apologize to Mr. Howard for the comments that were directed at him by this individual. While the original email Mr. Howard sent to the list regarding the website of Antenna Specialists may not have been extremely necessary, the language of Mr Howard's email was neither offensive to anyone on our list or (in my review of it) innaccurate. I appreciate your (Mr. Howard) input to the list, and hope you'll continue to provide the valuable information we've come to appreciate very much. As anyone who participates in very many email-lists knows, occassionally someone comes along intent on causing problems and offending others while failing to participate at all themselves. Unfortunately these things are part of the Internet and email-lists like this one. But to those who emailed and called me this weekend inquiring as to why content like that would be tolerated on our list, please rest assured
it won't be. This has been a great place for hobbyists to gather online for well over a year now, with only a couple of negative incidents, and I am committed to keeping this a respectful place to share our hobby.

Regards,
Dan Rollman
ArizonaScanner List Operator

1167. Question about DPS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-02-26 08:51:34 UTC
From: Joseph Stein
Topic: 1167 Message: 1167

(Message from a distant lurker)

Here in Oregon this evening, we had our primary State Police Dispatch Center closed due to a "smoke in a structure" fire call. A question was raised on a local mailing list about redundancy in those types of facilities (we pay so many $$$ for service, why don't they have a backup?).

I was trying to draw a corollary to the way that I was told that DPS works, with a dispatch center (probably wrong, this is going on old memories) in Yuma, Flagstaff and Phoenix, each responsible for a specific part of the State of AZ, but, if trouble happened at any of them, any or all of the remaining ones could take over.

Could anyone take the time to explain it to me again? Or do I remember it correctly?

Thanks,

joe

Being in television news has left me rather thick skinned, myself. I have yet to find a post here that I found offensive. But Dan did the right thing in enforcing the rules to HIS list. And there in nothing in the rules that state you cannot have a signature line proclaiming your opinions to be yours and not your employers. Looking to pick fights online however is a definite no-no. And we all agreed to those rules when we signed up, did we not?

Walter, don't change your sig line for one persons' satisfaction - especially one who isn't here anymore. That line adds relevance to your posts - a sense of being on the inside and one who knows. Without it you're just... Walter.

To keep this post somewhat topical, I heard thru a reliable source that KPNX is currently thinking about going digital encrypted on their operations frequencies, to keep the other stations from listening in. Interesting....

1174. NEW! UPDATE to SWFD6 now available!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-03-04 10:20:42 UTC
From: Dan Rollman
Topic: 1174 Message: 1174

Bring your Scanner hobby UP TO DATE!

UPDATED Information for the SOUTHWEST FREQUENCY DIRECTORY is now available in a new 60-page booklet from Scannerstuff!

Scannerstuff has released a new 60-page booklet that combines two new products in one, easy to carry booklet!

Please see the Scannerstuff website at www.scannerstuff.com for ordering information for the "MetroGuide/UPDATE" booklet.

The "PHOENIX METRO GUIDE 6.1" AND "6TH EDITION UPDATE" booklet is now available for purchase. This booklet includes an easy-to-carry "quick reference" for public safety & government frequencies, basic radio codes, TrunkTracker talkgroups, and more for the Phoenix valley.

Also include in this booklet is page after page of NEW and UPDATED information for owners of the Southwest Frequency Directory 6th Edition "Big Book". The updated information is organized by page number (referring to the page in SWFD6 being updated), so owners of the "Big Book" can make changes and additions to their book to bring it up to date, without having to spend $30 or more on a whole new "Big Book". Some of the changes and new information include a "tactical channel assignments" map for Phoenix FD tactical channels, exhaustive lists of Maricopa County government (and MCSO) Trunked Radio Talkgroups, United States Border Patrol operations repeaters, Flagstaff Fire Department new 16-channel radio system, changes to Phoenix FD response assignments, updated valley fire station numbering, locations, and apparatus, and much more!

The "Phoenix Metro Guide 6.1 and 6th edition UPDATE" booklet is available now for online order direct from Scannerstuff for just $15, sales tax included. This book won't be available on store shelves for 1-2 weeks, but hobbyists have the ability to purchase it now, direct from Scannerstuff, right online! Your book will be shipped within 24 hours of ordering via First Class mail.

Please see the Scannerstuff website at www.scannerstuff.com for ordering information for the "MetroGuide/UPDATE" booklet.
Email us at sales@... if you have questions regarding this exciting new product.

Click to go straight to the online order page for the new MetroGuide/UPDATE booklet!

Sincerely,
Dan Rollman

Good call Wayne on the 411.725... I am curious, is that another
link freq for their (forest service) repeater system??.. and as for the
168.025 freq.... I show that as a mobile transmit freq for the NIFC #9
channel (output of 163.100) down here (Sierra Vista area) on Mule Mtn.

CNF LE is up on both frequencies (168.025 / 411.725) this hour. They appear to cross-patched and are repeater outputs. I am almost positive that I have logged somewhere that the input to 168.025 is 163.100 (which is also the way it is listed in the SWFD). I do not show PLs being transmitted on those outputs. You might also remember that 163.100 is a very common federal calling channel. Numerous other agencies have been heard in simplex on it.

Good evening Gary.

I have really enjoyed this scanner so far, . . .best I've ever purchased. Took me a little longer with the manual as this was my first Uniden product, . .but I'm a satisfied customer. I'm not using any software, . .(if they sold it for $40 I might), . but I didn't find programming to be a big chore. I have not had any problems with intermod. Many bells and whistles. I did find the units audio weak for mobile use, but, an external speaker from RS cured this easily. Any particular part of town that you do find intermod to be a problem? Maybe I could do a drive-by and check out its performance?
Dave

I live in North Phoenix (Tatum/Deer Valley), and this radio works very well up here. I get Scottsdale, Glendale, and Chandler/Gilbert TRSs, as well as excellent reception of conventional stuff. I also use it in my truck, and it works very well all over town. If you are debating whether or not to get one, get one. I wish I had at least one more.

Good evening Gary.

I have really enjoyed this scanner so far, . . .best I've ever purchased. Took me a little longer with the manual as this was my first Uniden product, . .but I'm a satisfied customer. I'm not using any software, . .(if they sold it for $40 I might), . but I didn't find programming to be a big chore. I have not had any problems with intermod. Many bells and whistles. I did find the units audio weak for mobile use, but, an external speaker from RS cured this easily. Any particular part of town that you do find intermod to be a problem? Maybe I could do a drive-by and check out its performance?
Dave

1184. Re: [ArizonaScanner] Coronado Forest Law Enforcement Net

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-03-08 19:01:07 UTC
From: ravenfalls@aol.com
Topic: 1175 Message: 1184

Hi Wayne,

In reference to the PL's, USFS, BLM, NPS and most other fed & state fire agancies use a standard list of PL's. Called Tone 1-10. The list is best I can remember.

Tone 1 110.9
Tone 2 123.0
Tone 3 127.9
Tone 4 131.8
Tone 5 136.5
Tone 6 146.2
Tone 7 151.4
Tone 8 162.2
Tone 9 167.9
Tone 10 103.5
156.7 is another.

Using the above tones to decode the transmissions one of those should work. If you travel outside of the current PL used you will have to find the other PL for the system. Unless the system transmitts a standard PL and uses multiple PL's for transmitting into each site.

Hi,
Belatedly, is there a PHX FD live scanner feed.

I tried a Copernic search and got nothing but PHX PD on APB News and that
link is no good.

TIA,

Temp

Yes , they want to use the new 700 Mhz allotment that opened up, and use APCO
25 stuff to boot.

Topic: 1181 Message: 1196

Today I purchased a Uniden 780.

I setup the radio to trunk Glendale and it works great.

I am now trying to program the unit to receive Scottsdale.

I keep getting data channels that cause the scanner to stop. Some of the ID's are 43248 & 43120.

I set the radio to the following data setups:

E1-P10 (I am not sure what E2 means)

866.1250
867.4375
868.5375
866.2250
867.7375
868.7750
867.1375
867.8375
868.8750
867.1875
868.0375
868.9250
867.2375
868.1375

I did not set the talk groups because the owners manual says that the search mode will display all the groups.

Gary,

You made a great decision in buying the 780!
Scottsdale is a Type II system (in the BC245's and BC235 scanners, this would show on the screen as "E2"). You need to set your 780 for Motorola 800 Type II to track Scottsdale properly.

You are correct that search mode will search for all active talkgroups on the system.
However, you will find it valuable to program in the talkgroups you'd like to monitor, like Scottsdale PD, etc. Virtually all Scottsdale city government is on this same system, so along with PD, you'll hear garbage trucks and water meter readers if you are just "searching" the whole system.

Thanks Dan,

I also noticed that the frequencies were incorrect after I sent the Email.
It works great now.

I have a demo version of the Winscan 780. It seems kind of slow when typing
in data.

Which do you think would be better, the Winscan780 or Scanstar780 or ?

1199. RE: [ArizonaScanner] Uniden BC-780

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-03-18 21:01:00 UTC
From: Dan Rollman
Topic: 1181 Message: 1199

For programming only (as opposed to active radio control), I prefer "Andy's BC780xlt Programmer" available for free in the files area of the UnidenBC780xlt list on yahoogroups. It utilizes an MS Excel spreadsheet for management of your scanners contents, and Andy's Programmer simply links Excel to the 780 for quick and easy programming.

WinScan and Scanstar are great tools for active control of your 780 via PC, though.

Dan

Subject: Re: [ArizonaScanner] Uniden BC-780

Thanks Dan,

I also noticed that the frequencies were incorrect after I sent the Email. It works great now.

I have a demo version of the Winscan 780. It seems kind of slow when typing
in data.

Which do you think would be better, the Winscan780 or Scanstar780 or ?

Gary

Here is another link (it will expire this Friday) and if that doesn't work the full text...

http://www.azstarnet.com/star/sat/10317remergencyradios.html

Millions sought for new police radio net
THE ASSOCIATED PRESS

PHOENIX - The statewide radio system the Department of Public Safety and other state agencies depend on is obsolete, headed toward failures and should be replaced as soon as possible, according to a report by the Office of the Auditor General.

The $27 million system now in place uses analog technology and microwave transmitters. Manufacturers switched to digital technology in the early 1990s and no longer offer parts to maintain older systems, forcing the DPS to take spare parts from existing equipment to keep its system running.

"As such, the issue for DPS is no longer whether to convert from analog technology, but when," the report said.

While noting that the current system is not in any immediate danger of failure, the auditors said that is inevitable. They recommended that the DPS develop a replacement plan, seek federal grants to defray some of the cost, and then ask the Legislature to buy a new radio system.

Upgrading the system to digital technology could cost $50 million to $60 million, said Lt. Col. David Felix, assistant director of the DPS Criminal Justice Support Division.

That change would still leave each agency using a portion of the system's transmission bandwidth for itself, and unable to communicate directly with other agencies on the network.

Adding that capability would cost an additional $150 million, Felix said.

Getting the money to pay for the upgrades and maintain the system anytime soon could be difficult.

Gov. Jane Hull and legislative leaders have been reducing their budget plans by hundreds of millions of dollars in light of a softening economy and falling tax revenue projections.

"This is something we need to do but we need to do it as we can afford it," Hull spokeswoman Francie Noyes said. She noted that the governor included $840,000 for radio upgrades in her current two-year budget recommendation.

"There is not a lot of spare cash," she said. "You try to meet the needs you have with the money you have."

One option may be to phase in the upgrade over several years, Noyes said. The radio system has three central operation facilities - Flagstaff, Phoenix and Tucson. As each area receives new technology, what is taken out could be used as spare parts for the remaining old equipment, she said.

To raise the money, Felix said the DPS is considering requests for new surcharges, user fees and sharing some costs with counties that want to tie in to the system.

"It'll be a challenge to figure out how to pay for it," he said.

Besides the DPS, the radio network is used by other agencies including the Corrections, Game and Fish, and Transportation departments.

Those talkgroups that are coming up (43120, 43248 etc.) are MCSO
digital talkgroups.

Gary,

Until I saw Brian's message, I didn't notice the contradiction between the frequencies/talkgroups listed, and your mention of "Scottsdale". The frequencies and talkgroups you mention correspond to the Maricopa County trunked system on Thompson Peak, not the City of Scottsdale system. Two totally different systems.

Brian is right... 43### talkgroups are MCSO talkgroups in digital mode, on the County system.

On the Scottsdale system, you'll find all analog talkgroups, and you'll find Scottsdale PD in the lower numbers (TG 48 for South, TG 112 for North, etc.)

Dan

1204. Pics from my AZ scanner trip last year

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-03-22 01:44:23 UTC
From: Kevin P. Inscoe
Topic: 1204 Message: 1204

http://inscoe.org/trip2000/

Finally got around to putting these up. Nothing fancy. You will have to click on each pic for now. Maybe later make a nice fancy indexer-thumbnailer. But thought you might find it interesting. The directories are for each the places I visited: Pima Air & Space Museum (near Davis-Monthan AFB), Titan Missle Complex Museum, Nogales AZ (including a shot of the local FD there) and Senora Mexico, Kitt Peak Natl. Observatory and last but not least I happened to be in Phoenix last May when POTUS was visiting so I have some close-ups of AF-1. The closest I have every come. Was at the the Sky Harbor airport.

The pics are kind lousy quality it was an old Kodak digital camera and I have since learned a lot of techniques to make them better but it was needless to say not a mega-pixel. I especially like the HF antenna array for the Tital Launch Complex set for NORAD broadcasts.

http://inscoe.org/trip2000/Titan/Untitled-1.jpg

Enjoy,

~kevin

My boss.
The above refers to the statewide microwave backbone.

Below refers to the possible 700 MHz "radio" system.

This is just about the same number we've been getting for the last 4-5
years.
This barely keeps up with replacing units that are 10 + years old.

We are already doing this. New consoles in Phoenix mean that there
are now spare console pieces in Flag and Tucson

Each of those has their own "radio" system. Some "we" maintain, but not
all.

We work with 13 state agencies in some form or other. Plus a handfull of
feds.

This evening, Tucson Fire Eng.4 rolled-over @ Speedway / Silverbell.
It then caught fire. All four crew members escaped but were
transported to University Hospital. Check the local news @ 2200hrs
for details. Some radio traffic still available on F1/F2/F4...

1208. Chandler

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-03-30 03:22:16 UTC
From: foresigt@hotmail.com
Topic: 1208 Message: 1208

Has anybody heard Chandler respond on their Channel 1 since Phoenix started dispatching them? A friend of mine that works for Southest tells me they are only using Blue Deck 2 (Chandler channel 2)

Does anybody know if they are using their old tones before I program the receive channels into my radio?

Dave

Have heard Chandler dispatched on Fire1 (154.190) and respond on B1 & B2
several times since they went online with Phx. They seem to have kept the
same PL for B1 of 100.0.

Southwest Ambulance is very much operational in the valley, they serve the cities of Avondale, Chandler, Gilbert, Goodyear, Glendale, Tempe, Mesa, Peoria, Tolleson, El Mirage, Surprise, Guadalupe, as well they respond on many calls in areas covered by Rural Metro Fire. I think that's all of the cities they cover, I may have missed a couple.

You missed Sun City. They now serve there due to the combining of them with
Rural Metro. All the areas that were served by AMT are now Southwest.

It seems (thought too soon to tell for sure) that "fire" calls are being run on B1 (Old Ch1), and all EMS calls are being run on B2 (old Ch2). That might explain why a Southwest Ambulance guy would think only B2 was in use.

Dave & Charles, thank you for the info re: S/W ambulance. A friend of mine who works for AMR in Las Vegas informs me that S/W recently began service in So. NV. and that he thought they had quit service in the Phoenix area. I informed him that they had not. Would you or anyone else be able to state who provides service for the following communities?

Apache Jct
Apache-Sitgreaves NF
Black Cyn
Boeing
Buckeye
Buckeye Vly
Carefree
Chandler Heights
Circle City
Coconino NF
Daisy Mtn
East Cnty
Fountain Hills
Ft. Apache Agency
Ft. McDowell
Gila Bend
Gila River
Guadalupe
Harquhala
Kaibab NF
Laveen
Litchfiels Park
North Cnty
Palo Verde NPS

Danny, I filled in as many blanks as I could come up with. Just a note Rural Metro and Southwest Ambulance have merged so they will often run on each others calls.

Buckeye
Buckeye Vly
Harquhala **
Palo Verde NPS*
Tonopah

primary ambulance service is provided by Buckeye Valley Fire District /
secondary is southwest

*the nuke plant has an ambulance on site, but wont transport (NRC)
** Harquahalla is within the BVFD CON,

Buckeye Valley CON is from Cotton Lane west to 10 miles into Lapaz County

For Gila Bend they have their own, secondary is Buckeye Valley or Ajo

Regards,
Kevin

Kevin,
I was under the impression that Harquahalla had a rescue? Guess I
was wrong, thanks for the correction.

Daisy Mtn Fire Dist. has the CON for Daisy Mtn and Blk Cyn City for now, but Blk Cyn is heard to be looking into getting their own. Possibly just a rumor, but ya never know. As for Cave Creek and Care Free, They are covered by Rural Mrtro Sta - 821.

Danny, I filled in as many blanks as I could come up with. Just a note Rural Metro and Southwest Ambulance have merged so they will often run on each others calls.

Morning all... let me show my ignorance... I am not familiar with the term "CON", as it has been used here lately in reference to rescue squad/ambulance equipt. I spent 4 years in Uncle Sams Yacht Club, and I am certain that the term CON has a very different meaning there, than it does in EMS circles!

CON IS
Certificate of Necessity.

Essentially is is the blessing of the Department of Health Services
blessing to operate and ambulance in a given area.

Hope that helps!

Mike

And the neat thing is, it is basically a state-sponsored monopoly. The
primary CON holder has the right of first refusal for EMS call in their area.
other providers are allowed in only at the request of the primary holders.

I've been involved in so many other things lately that I haven't had a chance to follow all the threads. What's been happening with the ability to monitor the Pima County Sheriff's trunked system. Is there a new scanner out that can decipher their system or any software that can do same? My BC245XLT bank with PCSO in it is collecting dust. Any new info or tips would be greatly appreciated. Thanks!

1234. Helicopter Questions

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-04 09:11:00 UTC
From: John H. Guetherman
Topic: 1234 Message: 1234

Hey all,

1) Is Phoenix PD air support still using 123.500? I haven't heard them on there recently. Have they gone somewhere else? Occasionally I hear them chatting on 123.025.

2) Has anyone confirmed any other air-air channels being used by any other fixed- or rotary-wing public safety or media aircraft? I'm looking mainly for "chit-chat" channels, not ATC. (I do know that Scottsdale airport has 125.500 specifically for helo control.)

3) Does anyone have a list of the registration numbers, past and/or present, matched with their on-air designators, for the public safety and media helo's in the Valley? I have a few, but would like to confirm them, and add the rest. (I realize some may change on occasion, due to maintenance rotation, etc.)

4) Has anyone confirmed any military or federal agency air-air channels monitorable in the Valley?

5) Is there any event in the Valley that specifically showcases helicopters? I'm aware of "Rotor Fest" in other parts of the country, but I don't know if it appears here.

6) If anybody from the media subscribes to the group, or if anyone has contacts with the media, an idea for your/their websites: Add detailed info on your helo's and their capabilities. (The same for your ENG and satellite trucks would be nice too.) Pictures too!

7) Is there anyway for a civilian to get a ride-along on a helicopter? I'm not picky as to whose helo, any helo would be fine. *grin* (Something I've wanted to do since I was a kid.)

John,

As far as I know, 123.025 seems to be *THE* chit-chat helicopter frequency for the Phoenix area, used extensively by the media, pd, and medical choppers. TV3's Bruce Haffner will often do live, aircraft-to-aircraft interviews on this frequency with other helicopters/planes/balloons/whatever. Any newsworthy event with helicopter coverage will generate traffic on this frequency.

It's funny you should mention 123.5, I think it used to be Phoenix PD's "company" frequency. I still have it programmed in to my scanner, but I often hear what sounds like fixed wing aerobatic training on it. Lots of references to being some distance/heading from "the volcano", whatever that is. Maybe someone else can jump in here.

I took my daughter to "Helicopter Day" last November at Mesa's Falcon Field. Lots of static displays, RC demonstrations, and several helicopters giving rides to the public.

Hope this helps,

Carl N7UZP

Bruce should not ever being doing an air to air interview on 123.025. That Channel is used specifically for air to air conversation amongst pilots and is designed for them to call out positions etc. Since there is not one IFR helicopter in the area (shy of customs, and not even all of theirs) they use 123.025 for collision avoidance.
The frequency is very active 24 hours a day and is used by all pilots entering or leaving the phx area as well as to communicate their location as they are flying.
There is a significant amount of chit chat on the frequency, but it should never be used for an actual interview.
123.500 is still the firebird (phx pd) company frequency.
Heard them on it last night. Its just that they dont typically switch to it because its one more radio to have to change freqs on.
Not sure anything about the reference to the volcano.
Phx PD does have at least one fixed wing plane that I have heard on the company channel.

Mike

I know we have beat this horse a few times, but I found this list in the Phoenix fire dispatch newsletter.

001-099 PHX fire
100-109 sun city west
110-119 laveen
120-129 el mirage
130-139 sun city
140-149 daisy mountain
150-159 glendale
160-169 Tolleson
170-179 Avondale
180-189 Goodyear
190-199 Peoria
200-229 mesa
230-239 sun lakes
240-249 guadalupe
250-259 Gilbert
260-269 apache junction
270-279 Tempe
280-289 chandler
290-299 salt river
300-309 suprise
310-319 town of buckeye
320-329 Buckeye Valley
330-339 black canyon
340-349 Tonopah
350-359 Palo Verde nuke plant
360-369 salome??
370-379 Harquahalla
380-389 Gila bend
390-399 unknown
400-409 Gila River
700-799 phx adaptive

kevin

That all looks about right, except Gila River is the 500 series, hear E591 on Fire 1 every once in a while asking for mutual aid. Maybe they'll be changing their #'s too.

1239. mile post question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-05 23:46:41 UTC
From: Temp Berdan
Topic: 1239 Message: 1239

Hi,
When I drive from Sedona to Flag, I see mile markers every few miles.

However, when I listen to DPS, I note that the officers almost always give their exact location (as in mile maker 233.5, etc.).

What are they doing to know _exactly_ where they are???

1240. Request help for Station Locations

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-06 00:43:20 UTC
From: d952@mohaveaz.com
Topic: 1240 Message: 1240

Just recv'd my new (2K1) Thom Bros Metro Phoenix Guide and now is the time to start giving it chicken pox (different colored 1/4" labels) to identify every fire station w/n the pages of the book. Have already completed Phoenix except for 34's. An earlier post on this board had a roster of stations w/address'and 34's was 50 N. 40th Ave.

When I get to page 700, grid A/6-7, where I think it should be I don't find a symbol w/the FS letters to ID a fire station. If someone knows the exact location (between two cross streets)please let me know if you will.

I would also like to request the same info, exact location (between two cross streets)for the 21 stations that Rural Metro staffs. These would include Scottsdale.

Thanking you in advance
Danny Mclean

From: Dan Rollman
Topic: 1237 Message: 1242

Hey Kevin,
Thanks for passing that list along. It is kind of perplexing, though. Hard to imagine, but Phoenix fire dispatch's newsletter about their own numbering system is wrong. :)

I guess as Charles said once before, not much use in asking Phoenix FD for the info since they don't even know correctly. LOL.
So often, the scanner community seems to know better, and be able to come up with better info on agencies then the agencies themselves.

For one, 400-409 is Fort McDowell, not Gila Bend.
Gila Bend is 531 (Sacaton), 561 (Komatke), and 591 (Firebird/Wild Horse Pass).
Whoever put together the list must have just gotten their indian reservations mixed up.

How about 401-410 as Fort McDowell? Maybe that is too recent, since Ft McDowell just started operations several months ago.

Whether media pilots should or shouldn't use it that way, it's fun to listen to, which I am sure was Carl's point. After all, that is the point of scanners. Listening to the activity, not so much determining whether the activity should have taken place on the frequency.

By the same logic you apply, PD helo's probably should not spend time (especially during the day) using the same 123.025 to cheer eachother on about how "cool" scenes they were over looked, and talking about their weekend plans at the lake, but they occassionaly do. The sun still manages to rise over the White Tanks the following morning. :)

Subject: RE: [ArizonaScanner] Re: Helicopter Questions

Bruce should not ever being doing an air to air interview on 123.025.
That
Channel is used specifically for air to air conversation amongst pilots
and
is designed for them to call out positions etc. Since there is not one
IFR
helicopter in the area (shy of customs, and not even all of theirs) they
use 123.025 for collision avoidance.
The frequency is very active 24 hours a day and is used by all pilots
entering or leaving the phx area as well as to communicate their location
as they are flying.
There is a significant amount of chit chat on the frequency, but it should
never be used for an actual interview.
123.500 is still the firebird (phx pd) company frequency.
Heard them on it last night. Its just that they dont typically switch to
it because its one more radio to have to change freqs on.
Not sure anything about the reference to the volcano.
Phx PD does have at least one fixed wing plane that I have heard on the
company channel.

Subject: [ArizonaScanner] Re: Helicopter Questions

John,

As far as I know, 123.025 seems to be *THE* chit-chat helicopter frequency for the Phoenix area, used extensively by the media, pd, and medical choppers. TV3's Bruce Haffner will often do live, aircraft-to-aircraft interviews on this frequency with other helicopters/planes/balloons/whatever. Any newsworthy event with helicopter coverage will generate traffic on this frequency.

It's funny you should mention 123.5, I think it used to be Phoenix PD's "company" frequency. I still have it programmed in to my scanner, but I often hear what sounds like fixed wing aerobatic training on it. Lots of references to being some distance/heading from "the volcano", whatever that is. Maybe someone else can jump in here.

I took my daughter to "Helicopter Day" last November at Mesa's Falcon Field. Lots of static displays, RC demonstrations, and several helicopters giving rides to the public.

Hope this helps,

Carl N7UZP

1247. Re: [ArizonaScanner] mile post question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-06 20:48:27 UTC
From: Danz, Dan
Topic: 1239 Message: 1247

I'm sure some of the DPS officers could tell you more precisely than half mile intervals ... after you drive the same road, and make lots of traffic stops, day in and day out,... well, you get the idea. I'll bet some can tell within a quarter mile blindfolded. :-)

Why do they say it on the radio? It's just a way for the officer to tell the dispatcher (and other officers) that he's halfway in between mileposts .. more specifically, this one means he's a half-mile north of milepost 223.

DPS doesn't use a CAD system, but we do - and CAD comes with a geo-file that has all the addresses, jurisdictions, which beat, which reporting area and so forth. One of the things we do is assign the interstates and other highways pseudo block numbers with a 100-block every mile. In this way, the system can determine, for example, which console to route a call to, etc. In our case, we'd enter this as "22350 I 17". Or, if somebody reports a quarter mile west of milepost 115 on I 10, we'd call it "11475 I 10" or perhaps "11500 I 10 #QMWO". It works out very nicely. On the air, though, we say three quarters of a mile east of mile post 114 on I 10, or something similar. I doubt many of the deputies know we make the conversion.

L. W. "Dan" Danz Radio Dispatcher/9-1-1 Operator
Maricopa County Sheriff's Office (MCSO)
Phoenix AZ 85003 USA mailto:L_Danz@...
*Opinions expressed are my own. I do not speak

1249. RE: [ArizonaScanner] mile post question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-07 01:10:30 UTC
From: Dan Rollman
Topic: 1239 Message: 1249

Hey Dan,
Your explanation of how MCSO does this is interesting! Never knew that.

As for DPS, I asked a DPS-officer cousin of mine a few years ago this very question back when I lived in Tucson. He gave an interesting answer. The vast majority of the "decimal" milepost numbers you hear, are a place, or near one. Meaning, a wash, a river, a crossing road, a canyon, a "turnoff", a pullout or rest stop, or some other land or non-land object that designates that "place". Many of the officers, himself included, have a "list" of common places in their district and their exact milepost numbers.

In my travels around the state, I've even noticed that the DPS district responsible for a highway often changes at decimal-mileposts. For example, traveling East on Hwy260, east of Payson, you transfer from District 11 to District 3 at milepost 281.7. The last time I passed that stretch of road, I kept my eyes open (I normally do when driving, but this time especially so!). Sure enough, Highway 260 milepost 281.7 is the exact spot of two things: The spot where Hwy260 officially crosses the Mogollon Rim, and the Gila/Coconino County line.

With enough of these places on your chart, pretty soon you can give a location down to the tenth of a mile, just by looking which "place name" is near you. Example... if you stop a car 500 feet or so past the Mogollon Rim sign, wouldn't take much to figure that would be about 281.8 (if the sign is at 281.7). A little further up, and you'd probably have the 282 green sign in sight. :)

Subject: Re: [ArizonaScanner] mile post question

I'm sure some of the DPS officers could tell you more precisely than half mile intervals ... after you drive the same road, and make lots of traffic stops, day in and day out,... well, you get the idea. I'll bet some can tell within a quarter mile blindfolded. :-)

Why do they say it on the radio? It's just a way for the officer to tell the dispatcher (and other officers) that he's halfway in between mileposts .. more specifically, this one means he's a half-mile north of milepost 223.

DPS doesn't use a CAD system, but we do - and CAD comes with a geo-file that
has all the addresses, jurisdictions, which beat, which reporting area and

so forth. One of the things we do is assign the interstates and other highways pseudo block numbers with a 100-block every mile. In this way, the
system can determine, for example, which console to route a call to, etc. In our case, we'd enter this as "22350 I 17". Or, if somebody reports a quarter mile west of milepost 115 on I 10, we'd call it "11475 I 10" or perhaps "11500 I 10 #QMWO". It works out very nicely. On the air, though,
we say three quarters of a mile east of mile post 114 on I 10, or something
similar. I doubt many of the deputies know we make the conversion.

Hi,
When I drive from Sedona to Flag, I see mile markers every few miles.

However, when I listen to DPS, I note that the officers almost always give their exact location (as in mile maker 233.5, etc.).

What are they doing to know _exactly_ where they are???

1251. Re: mile post question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-07 08:23:19 UTC
From: John H. Guetherman
Topic: 1239 Message: 1251

That is interesting info. Thanks, guys.

A somewhat related question. I'd like to know what the borders are for each of the patrol areas/beats within DPS District 14/Metro West, and MCSO District 3. I'm at 91st and Peoria Ave.'s, and I know I'm in Area 4 for D14, (just off 101@Peoria). If someone could give me both the milepost, and the landmark (cross street/hundred block in the metro area), that would be a little more helpful for me.

By the way, any update on who's going to get MCSO's old UHF channels?

John H. Guetherman

1252. Tempe Fire Info

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-07 11:35:37 UTC
From: John H. Guetherman
Topic: 1252 Message: 1252

Just found this on the Tempe Fire website at http://www.tempe.gov/fire/docs/110.01.htm Here's two of the paragraph's under Emergency Response Section 5:

"Automatic aid (dispatch of the closest fire company regardless of political jurisdiction) has been in place with the City of Phoenix since 1976. Automatic aid with the City of Chandler has been in place since 1986. In January of 1998 we began transitioning toward automatic aid with the City of Mesa. A similar program with the Town of Guadalupe began in 1999 and is having a positive impact on response times in areas of Tempe near Guadalupe, as well as, an overall improvement in delivery of Emergency services for all of Guadalupe."

"Automatic aid with the City of Phoenix is strongly supported by a combined fire department communications and dispatch center operated by the Phoenix Fire Department. Automatic Aid with the City of Mesa is expected to be strengthened over the next year by linking it's communication center with the one in Phoenix, thereby reducing alarm dispatch time and providing unparalleled redundancy in the event of a system failure in either Mesa or Phoenix. The City of Chandler Fire Department has joined the Phoenix Fire Department's regional dispatch center effective January 2001. This change will significantly reduce alarm processing time for incidents in which Chandler units are responding into Tempe or Tempe units into Chandler."

I'd like to know how they're going to do the linking. Will they simulcast communications between the two systems, or will it be limited to just a dispatch-to-dispatch link? I can't hear Mesa or Chandler from my home in Peoria, although I don't have any outside antennas at all, let alone a Yagi. I know Chandler's transmitters were electronically skewed to concentrate the radio signals within the city, providing better coverage within buildings.

In regards to going to 800 MHz, there's this paragraph:

"800 Mhz radio system"

"The new radio system will improve emergency scene operations and efficiency and firefighter safety. It is required at this time due to an FCC decision to re-allocate the spectrum of frequencies that most fire departments operate on.

The system will include:

· New radio communication infrastructure with in-building coverage - intended to blanket the entire city.

· All new apparatus radios and personal portable radios equipped with remote mike and receiver devices.

· A new radio frequency allocation resulting in an increased capability to communicate during emergency operations with personnel from other agencies."

I've read about several problems with digital trunking, where the radios would not work like they're supposed to. FDNY apparently almost lost a firefighter due to a failure to field test the radios prior to distributing them. The firefighter got trapped, and couldn't call for help. His radio transmissions couldn't get out of the building. They went back to their old system, until the problems can be resolved. Whether the system is analog or digital, I just hope that the Valley departments thoroughly field test them in varied conditions and localities before issuing them to the firefighters.

Anyway, that entire document has some very good info on it.

John

1253. Re: [ArizonaScanner] Tempe Fire Info

From: Charles Simmont
Topic: 1252 Message: 1253

John,
Not only is the FDNY having trouble with their Motorola Astro
Digital trunking system, but many agencies across the country are
experiencing problems with their trunking systems. At the moment MCSO is
the only agency using a digital trunked radio system in Maricopa County
that I know of, and they are having their problems too. So when Phoenix &
Mesa put their "state of the art" system online you can bet there will be
problems. I guess we can all just hope it is limited to poor communications
and nobody (officers, firefighters, or civilians) are hurt or loose their
lives due to lack of communication.

1254. Fire Station Locations

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-08 05:02:26 UTC
From: d952@mohaveaz.com
Topic: 722 Message: 1254

Is there any(more than) one living in the vast Valley of the Sun who might be able to help me w/the following info:I have specific street address' for several Rural Metro stations but my problem is locating them in my new Thom Bros map Guide as the data I have only list the address not the name of a community or settlement where the station is located. I am trying to pinpoint the follwing stations:

Sta's 32, and 33 West Cnty

Sta 40 North Cnty

Sta's 54, 57, and 59 East Cnty
It becomes somewhat difficult to locate an address @ Map Quest w/out the name of a comminity.

Any assistance would be appreciated

Thanking you in advance
Danny Mclean

Station 833: 11140 N. 136th Ave., Surprise (32 no longer exists. Was originally at what is now 133 in Sun City, then moved to Grand and Happy Valley Rds., I believe.)

Station 840: Was I-17 and Honda Bow Rd., which is south of New River. The SWFD 6th Edition Update now says 39908 N. Galvin Parkway, but my Thomas Bro's. 1998 map book only shows Galvin Parkway in Papago Park, between Van Buren St. and McDowell Rd., linking Priest Dr. with 64th St.

Station 854: 15944 E. Willis Rd., Higley (Norton's Corner)

Station 857: 334 N. Bush Hwy., (County island in) Mesa

Station 859: 401 N. 104th Street, (County island in) Mesa

Hey all,

On 123.500, I think it may be glider/sailplane pilots. There's a glider field up by Lake Pleasant Road and Carefree Highway. Don't know where the "volcano" may be. Possibly some other stuff. (Peoria would like to turn it into a full-fledged municipal airport. Maybe a reliever for Sky Harbor.)

I've heard many an interview on 123.025 by Bruce. NewsHawk 5 did an interview on 123.075, *I think*, several months ago. I didn't write it down, though.

I'm hearing PHX pd much more on .025 than on .500 these days. That's why I was wondering if they moved off .500.

John

All of John's addresses below are correct, including Sta840. Anthem is a rapidly developing area. 2001 maps (maybe 2000 also?) do show Galvin Parkway up there.

From: Dave McCormick
Topic: 722 Message: 1259

Sta 840 is at the address shown. The major cross roads are as stated, but there is a Galvin pkwy in "Anthem" (the area that 840 serves). Galvin Peak is one of the mountains that Anthem is boardered by, the other is Daisy Mountain. Yes this is the same mountain that that fire district got its name from.

Subject: [ArizonaScanner] Re: Fire Station Locations

Station 833: 11140 N. 136th Ave., Surprise (32 no longer exists. Was originally at what is now 133 in Sun City, then moved to Grand and Happy Valley Rds., I believe.)

Station 840: Was I-17 and Honda Bow Rd., which is south of New River. The SWFD 6th Edition Update now says 39908 N. Galvin Parkway, but my Thomas Bro's. 1998 map book only shows Galvin Parkway in Papago Park, between Van Buren St. and McDowell Rd., linking Priest Dr. with 64th St.

Station 854: 15944 E. Willis Rd., Higley (Norton's Corner)

Station 857: 334 N. Bush Hwy., (County island in) Mesa

Station 859: 401 N. 104th Street, (County island in) Mesa

Indeed they use to use that frequency.
After some serious complaints by the CAP it was pointed out to all helicopter pilots that that frequency actually belongs to the CAP.
I have a copy of the memo somewhere from the FCC that was sent out by Sky Harbor Tower.
Not sure where it is, but if I can find it, I will transcribe it on here.
It explains the useage of the frequencies better.

From: Dan Rollman
Topic: 1234 Message: 1261

Hmm, Tucson PD used to use that frequency for Air to Air down there (with the media and medical helo's, much like 123.025 is here), and received notice that 123.100 is the nation-wide Search & Rescue air frequency. It doesn't belong to CAP (Civil Air Patrol, not the Canal for anyone wondering), but rather would be primarily used by them in searching for downed aircraft.

Mike is right, though, in my experience the FCC (or perhaps FAA?) has been pretty aggressive at keeping that frequency safe, since when an aircraft goes down, everyone involved in the search, CAP or otherwise, is expected to use 123.10 to coordinate. That's its nation-wide allocation: Search & Rescue. So no specific agency or group can use it alone.

Another good one to keep in your scanners, guys. :)

Dan

You know, Kevin - you just explained something ..

Yes, on our old consoles when we were in the basement we had an aircraft channel that we used to monitor. Ron, in particular, got a kick out of listening to the helo pilots chit chat.

But since we moved upstairs, I don't hear anything on the channel anymore. The Westside console operator monitors it, and I know I've had it turned up on nights when I work that console, and I haven't heard anything on it, ever.

My records, from several years back - from going thru the FCC licenses in radio - show WLQ5 as being on 123.100 and it's called Search and Rescue.

So, one of three things here:

1) We have the right frequency, but since the helo guys got off of it, there's not much traffic.
2) We're monitoring the wrong frequency, and should switch to 123.025
3) The connection to the new consoles doesn't work.

I never did understand why we needed to monitor the helo coordination stuff, but I sure can understand why we might need the SAR frequency.

Thanks to a lot of information from others on this list, data from the agency web pages, listings in Southwest Frequency Directory 6th Edition and the update, and especially some very detailed help from Dan Rollman of ScannerStuff, I've consolidated the listings of Phoenix Area Fire Stations and Fire Units into a database.

Two reports from that database are now in the files area of this group.

One is ordered by Agency, and then by station within the Agency, showing fire units assigned to each station.

The second is ordered strictly by unit number, to be used when scanning and hearing a strange unit identifier.

I also built, for my personal use, a ThinkDB2 database version of just the fire stations for loading onto my Palm VII PDA. I'd be glad to share that database with anybody who also has a Palm and the ThinkDB2 software. If there's enough interest, I'll load it to the files area. Let me know.

Also, please e-mail corrections to the data as you come across it.

Most likely the first reason, Dan. 123.10 was the chit-chat channel till everyone moved off of it and onto 123.025. Now, it's there for it's intended nationwide use, SAR. I've actually heard helo's calling "MCSO Radio" in the past on 123.10. Don't recall what for, or if I could hear the dispatcher reply.

We probably shouldn't rule out #3 however. Maybe someone could get Fox 1 to do a radio check on that frequency some time? It would at least confirm that it still works at the consoles. (And maybe give us folks a chance to listen in. *grin*)

Dan ,

I found that frequency, 123.100, while searching. I didn't know who it was, but then I heard them reference a landmark near my home and that they were on the way to Tucson Airport. I went outside to see, and it was two BP helo's. I haven't heard them on it since, so I don't know what they were doing on the frequency.

From: Mark Pagel
Topic: 1268 Message: 1268

Has anyone confirmed the freqs used by the company that runs the Sabino Canyon tours in Tucson?

The version of Dan's Southwest Frequency Directory book that I have lists some older 400mHz UHF freqs that are no longer in use. I belive the Rat Shack book has them at 800 mHz, but I have never heard anything on the listed channels as I commute around Tucson.

Also, how many of you list subscribers live in Pima county?

Thank you.

Mark in Tucson.

I've updated the Phoenix Area Fire Stations list from yesterday to correct some addresses and a station number, and to add Zip codes where I could determine them.

The reason for adding the zip codes is that StreetAtlas version 8 has an Import Address Book function that will place nice little map notes on the map if you give it a file with names and addresses that include zip codes.

And, to make it even easier, there's now a third file there that has this file all ready for importing into StreetAtlas 8. If you use this feature, you might want to pick and choose the entries rather than selecting all of them, since some of the station entries overlay the department headquarters flags.

And, there's some that the program won't locate automatically, especially ones on the Indian Reservations where I couldn't come up with a zip. But it sure beats doing them by hand.

As before, please let me know if there are any more corrections.

Just a note to ask if you have the new Phx. Sta.43 on your list. There is a engine and ladder there at this time. There is another current new engine up, Engine 708. I am unsure if this is just a temp or not.

Just another note of additions. You will sometimes here car numbers between 141 and 149. These are Daisy Mountain Personel except for Car-145 that is a pickup truck owned by the dept. to do errands.

1271. Ladder-43

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-11 05:04:37 UTC
From: Dan Rollman
Topic: 1264 Message: 1271

Station 43 is not open yet, has not even been built. Ladder-43 (and soon, if not already LT43) is operating out of Station 38 until their new station (#43) is built. 43 was one of the stations in the bond election approved a few weeks ago.

By the way, if anyone is interested, Ladder-43 is currently operating from Sta38 using the aerial that used to be Ladder-33.

Dan

1272. Unknown Fire Station; and Thomas Guides

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-11 10:31:38 UTC
From: John H. Guetherman
Topic: 1272 Message: 1272

I just bought the 2001 Thomas Brothers/Rand McNally map book on Tuesday. I noticed that there is a fire station icon on Pioneer Rd. at I-17, just north of the Ben Avery shooting range, and right next to the Arizona Pioneer Living History Museum. I *think* it's Phoenix station 52 or 53. I recall hearing a brush truck by that unit number being dispatched last summer for accidents and the like on the freeway. Can anyone confirm this for me?

And as for the new map books. They suck. Rand McNally bought out Thomas Bros. apparently, according to the guy at Wide World of Maps, and they changed the format of the Phoenix and Tucson editions. I prefer the old format, which so far has been retained by the California, Oregon, Washington, and Clark County, NV. editions that I saw at WWM. They're supposed to change as well.

Secondly, I've noticed that over a dozen fire station locations that were in my 1998 book, are missing from the 2001 editions. 816, 820, 825, 854, 855, 857, 859. Wittmann, Wickenburg, Aguila, Gila Bend, Tonopah, Harquahala. And the maps around Wittmann, Circle City, Morristown, Aguila, Gila Bend and Rio Verde are "zoomed out" using much smaller print for the streets, etc. I'd much prefer "zoomed in" maps, with larger, easier to read print. I'm comparing the two maps of Gila Bend. The '01 map shows at least twice as much land area, but with print type that is about half as large as the '98 book.

Third, there are no easy to find street hundred block numbers on the sides of the pages like there are in my 1998 book. They're in fine print along the streets themselves. If your eyesight isn't the best, you're not going to be able to read them.

Fourth, several extra map pages around the outskirts would be nice. 8 pages for the Sun Valley Parkway around the backside of the White Tanks, which is part of Buckeye, and the park itself. 8-10 pages for the Buckeye and Palo Verde NGS area. 5-6 pages, between Avondale/Goodyear on the west, and I-10 to the east. 2 pages south of Apache Junction, and 2 pages east of Fountain Hills/Ft. McDowell. 4 pages between Lake Pleasant and Morristown.

Which map books do the fire departments/ambulance companies use?

Two good points. The color scheme is a bit better. And two, the map pages have been re-aligned, making it a little easier to find streets in some cases. For example, in my '98 book, you have to look carefully in the upper right hand corner of page 146 to find station 821. In the '01 edition, it's on page 420, and to the right of center. And it makes it a good bit easier to follow Cave Creek Rd. as

it winds through Cave Creek and Carefree.

From: John H. Guetherman
Topic: 1273 Message: 1273

I'm currently a crew chief and student pilot for a hot air balloon crew here in the valley. We're using CB radio for our air-ground and car-to-car chase communication needs, but I'd like to see something better. I see three *possible* options.

1) VHF-Air band. There are 3 channels available for use by balloons: 123.300, 123.500, and another in the 122 MHz range, I can't recall off-hand exactly which one. Can we legally use the radios for air-ground between the pilot and chase crews? The CB's would remain for the car-to-car comms between the chase vehicles.

2) If it isn't legal, (and I suspect it isn't), the second option would be VHF business band. The pilots I crew for are commercial pilots, and do occasionally take passengers for hire, so they'd be eligible for a business band radio license. However, the expense of new radios, the license, and the co-ordination fees would probably cause my pilots to say no to that idea. (They already have the air-band radios and license.) The new MURS service, which is license-free, specifically prohibits operation from an aircraft. I'm sure there is some unlicensed business band radio usage by some pilots, as I can only think of one crew who actually id's. And only a few others who I've found a license for. However, I don't want to go that route, since it could put my Amateur and GMRS license's at risk. Not to mention the $$$ fines.

3) FRS. The only other license-free service, but I'm not too sure that the 1/2 watt power output would give us reliable range, especially when the balloon is down low and there are hills and washes between us. (We fly in the desert northwest of Cave Creek and Jomax Rds.)

So, is the first option viable?

John

All Fire Departments besides Rural Metro use their own mapping system
Everyone on the Phx Cad uses specific maps that are generated by the City
of Phoenix.
Mesa, Gilbert and that side of the valley uses the Thomas Brothers book.

As for ambos, they all use thomas brothers, but dedicated SW units mostly
have phx map books or mesa map books depending on where they run out of.

Subject: [ArizonaScanner] Unknown Fire Station; and Thomas Guides

I just bought the 2001 Thomas Brothers/Rand McNally map book on
Tuesday. I noticed that there is a fire station icon on Pioneer Rd.
at I-17, just north of the Ben Avery shooting range, and right next
to the Arizona Pioneer Living History Museum. I *think* it's Phoenix
station 52 or 53. I recall hearing a brush truck by that unit number
being dispatched last summer for accidents and the like on the
freeway. Can anyone confirm this for me?

And as for the new map books. They suck. Rand McNally bought out
Thomas Bros. apparently, according to the guy at Wide World of Maps,
and they changed the format of the Phoenix and Tucson editions. I
prefer the old format, which so far has been retained by the
California, Oregon, Washington, and Clark County, NV. editions that I
saw at WWM. They're supposed to change as well.

Secondly, I've noticed that over a dozen fire station locations that
were in my 1998 book, are missing from the 2001 editions. 816, 820,
825, 854, 855, 857, 859. Wittmann, Wickenburg, Aguila, Gila Bend,
Tonopah, Harquahala. And the maps around Wittmann, Circle City,
Morristown, Aguila, Gila Bend and Rio Verde are "zoomed out" using
much smaller print for the streets, etc. I'd much prefer "zoomed in"
maps, with larger, easier to read print. I'm comparing the two maps
of Gila Bend. The '01 map shows at least twice as much land area, but
with print type that is about half as large as the '98 book.

Third, there are no easy to find street hundred block numbers on the
sides of the pages like there are in my 1998 book. They're in fine
print along the streets themselves. If your eyesight isn't the best,
you're not going to be able to read them.

Fourth, several extra map pages around the outskirts would be nice. 8 pages for the Sun Valley Parkway around the backside of the White Tanks, which is part of Buckeye, and the park itself. 8-10 pages for the Buckeye and Palo Verde NGS area. 5-6 pages, between Avondale/Goodyear on the west, and I-10 to the east. 2 pages south of Apache Junction, and 2 pages east of Fountain Hills/Ft. McDowell. 4 pages between Lake Pleasant and Morristown.

Morning John... Donnie here in the Sierra Vista area, you do indeed have a delima.... I am in no way any kind of an expert, but down in this neck of the woods I can tell you that CB's are about the most common form of comms found for such work as your speaking about, primarily because of the pricing and availability.... I can also tell you that both the UHF and VHF intenerates are in use as well, and radios (ht's) can be obtained in 1 watt to 4-5 watt configurations... but again, I aint no LEGAL expert on such matters!!!
Keep us informed as to what you find out.... some of us enjoy listening to those comms, as they can get somewhat exciting at times!

I am not sure about all, but I do know that there is no permanently manned station at Pioneer. The Brush-53 truck was hanging around the Factory Shops Mall over the summer months, probably for coverage, but as far as I know, it was not there after 840 was in service. Daisy and 840 are still getting the calls for the RV Park at Pioneer.

Most larger departments use an internally generated map book...Phoenix fire
made ours for the buckeye area, and its about 230 pages.

The temporary FS52 is about to to into service on Tatum just South of Mayo and will house E52 (which, I believe, is currently in service as E708) and BC6. The permanent FS52 is still a large lot at Tatum & Melinda occupied only by a sign reading "Future Home of Phoenix Fire Department Station 52). Just waiting for them to go in service so my homeowner's insurance will go down ;)

Dan,
I loaded two files in StreetAtlas 7 format to the files area of this group last fall, September I think. They show location of most Valley Fire Stations including assigned apparatus (based on Info from Scannerstuff's SWFD). One file covers Phoenix & West Valley the other East Valley. I feeling motivated to update them if anyone thinks it would be worthwhile.

Paul,

If I remember correctly, you split the valley into two groups because there was some limitation of SA7 on the number of map note objects, or something like that.

SA8 doesn't have this limitation, at least that I could tell. I don't remember whether or not SA7 could import in this address book format like SA8 ... One thing I could do, if you want to correspond offlist is load the address book using SA8, then export the object list as such, and you could - hopefully - import the object list into SA7. I noticed that the object list has latitude and longitude information that the address book file doesn't have. This would at least get you started.

John-

As a veteran of many of the Albuquerque International Balloon Fiestas, I can tell you that my scanner gets quite a workout, while at the Fiesta Grounds. I have heard Balloon crews and air to ground comms on 122.800, 122.900, 122.950, 123.100, 123.300, 123.450, 123.500, (AM-air), 151.625, 154.600, 154.570 (VHF) 464.500 & 464.550 (UHF) as well as CB channels from 1 to 40 (excluding 9, 19, 27) with channel 14 the most used. I would assume, that FRS channels would be ok to use, and the 1/2 watt output shouldn't be a problem over short distances. GMRS may also be acceptable, provided this does not violate some FCC rule, about air to ground comms. I would also assume that just about any VHF low power frequency would be acceptable, as long as it is licensed to the business that operates or sponsors the balloon and/or it's crew.
I can relate that for scanner fans, it's a communications smorgasbord, with ATC(based in the foothills of the Sandia Mts. in Albq.), FAA, ABQ Tower & CLNC DEL, Ham(144 & 440 bands), Public Safety(APD, AFD, BCSO, NMSP-Police, Fire,County Sheriff, State Police), CAP(Civil Air Patrol), as well as business band (VHF & UHF), even the cordless & cellular phone bands. The news media operates in the 450 band, and is VERY active during the weeklong Fiesta. I used to work directly adjacent to the Fiesta grounds, for Albuquerque Publishing (local newspaper group) and I found I had to carry two scanners and a CB H/T just to keep up.
I hope this helps. Any comments by others are freely accepted and encouraged.

73's to all,

BD

Many of these frequencies were located in a service search of the above types, and also from knowledge of the Albuquerque area and it's Public Safety components. I have found the Monitoring Times and Popular Communications Magazines invaluable as to confirmation and information about, comms in use at air shows and balloon festivals. Fellow scanning monitors and Hams radio operators have been a great help, too.

Hi BD,

Thanks for the reply. I'd like to use VHF-High business band channels. There are a number being used already here in Phoenix. 151.625, 151.805, 151.895, 151.955, 154.570, 154.600. I heard someone on 151.705 this past Saturday morning, however 151.700 should be the proper frequency. My scanner stopped several times on .705, with no apparent indication that it was off-channel by 5 kHz. It sounded normal. Don't know if any of the UHF channels are used. The pilot's who I crew for, a husband and wife team, hold commercial pilot's licenses', so they could legally license in the business band. (The crew aren't paid, it's more of a hobby for us.) However, due to the cost of new radio's, possible frequency co-ordination, and license fee's, it's unlikely they'd go for that idea. The new MURS channels prohibit operation from an aircraft, so that idea is out.

They already own airband radio's, so that would be the easiest way to go, *if* it's legal to use them air-ground, between the pilot in the balloon, and the crew in the chase vehicles. Just because other crew's may do it, doesn't make it legal, or mean that we wouldn't get caught.

GMRS would require that everyone get their own license, so that's out. I don't think FRS would have the range, without external antenna's which aren't permitted, especialy if the balloon is close to the ground, due to the terrain features. I would like to try it, however, just to see. Don't have any FRS radio's at the moment, and since I just got laid-off from work, won't have any anytime soon.

My pilots have been to Alburquerque at least once before, but don't plan on returning. It's gotten to big for them, and they point out that there's usally at least one fatal accident every year. I'd like to attend at least once myself, as I wasn't on the crew when they where there. I'd like to go and volunteer as a crew member for whoever needed extra help for at least one day, not just as a spectator. Maybe one of these days.

John

> As a veteran of many of the Albuquerque International Balloon Fiestas, I can tell you that my scanner gets quite a workout, while at the Fiesta Grounds. I have heard Balloon crews and air to ground comms on 122.800, 122.900, 122.950, 123.100, 123.300, 123.450,

123.500, (AM-air), 151.625, 154.600, 154.570 (VHF) 464.500 & 464.550 (UHF) as well as CB channels from 1 to 40 (excluding 9, 19, 27) with channel 14 the most used. I would assume, that FRS channels would be ok to use, and the 1/2 watt output shouldn't be a problem over short distances. GMRS may also be acceptable, provided this does not violate some FCC rule, about air to ground comms. I would also assume that just about any VHF low power frequency would be acceptable, as long as it is licensed to the business that operates or sponsors the balloon and/or it's crew.
> I can relate that for scanner fans, it's a communications smorgasbord, with ATC(based in the foothills of the Sandia Mts. in Albq.), FAA, ABQ Tower & CLNC DEL, Ham(144 & 440 bands), Public Safety (APD, AFD, BCSO, NMSP-Police, Fire, County Sheriff, State Police), CAP (Civil Air Patrol), as well as business band (VHF & UHF), even the cordless & cellular phone bands. The news media operates in the 450 band, and is VERY active during the weeklong Fiesta. I used to work directly adjacent to the Fiesta grounds, for Albuquerque Publishing (local newspaper group) and I found I had to carry two scanners and a CB H/T just to keep up I hope this helps. Any comments by others are freely accepted and
encouraged.

>73's to
all,

> BD
>
> Many of these frequencies were located in a service search of the above types, and also from knowledge of the Albuquerque area and it's Public Safety components. I have found the Monitoring Times and Popular Communications Magazines invaluable as to confirmation and information about, comms in use at air shows and balloon festivals. Fellow scanning monitors and Hams radio operators have been a great help, too.

1287. Pronet Info?

Yahoo group: ArizonaScanner (1999 — 2002)

From: John H. Guetherman
Topic: 1287 Message: 1287

Hi all,

I was wondering if anyone could point me to any information online regarding the "bank bag trackers" that bank tellers can drop into a bag along with the money in case of a robbery. I read through the thread regarding them and Lo-Jack systems that was discussed some time ago. I'd like to know who manufactures them, and the technical details.

I'm corresponding with Bob Grove, of "Monitoring Times" magazine regarding them. He's looking for the technical info.

Thanks.

From: Charles Simmont
Topic: 1289 Message: 1289

Anybody using the "Andy's" software to program the BC780 figured out how to center the alpha text in on the display screen? I am familiar with Excel and centered the text in the spreadsheet, but it didn't transfer over to the scanner.

Charles,

I see Andy all the time on the UnidenBC780XLT group. In fact, he just posted an update to the program in that group. It's also part of yahoogroups.com so you should have no problem getting over there.

Hello, I'm pretty new to using scanners and I've done some searching but haven't been very successful to finding frequencies in my area. I seem to be missing at least one frequency for the local Police and I'm sure I'm missing some Fire Department freqs. I would also be very interested in local EMT and local Highway Patrol.

I live in Show Low, AZ and if somebody has these codes that would be splendid or point me in the right direction. I have tried cityfreq.com but it seems to me some of their listings are a bit outdated cause I never get anything on many of those frequencies.

I am looking forward to being a part of this group.

Thanks for listening :)

Hiyah Paul,

Go here for a few of them: http://www.cityfreq.com/az/showlow/ and

Go here for other towns in your area: http://www.cityfreq.com/az/

There is even a listing for "downtown" Greer, one of my favorite places in AZ.

Enjoy,

Temp

Charles,

Try putting leading spaces in front of the text (as many needed to
center the text) in the Excel cell, and then transferring it to the
BC780. As you found out, the Excel formatting won't transfer to the
BC780.

Hope that that works,
Scott

1295. DPS Pursuit 4/19/01

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-20 18:41:52 UTC
From: walter.howard@juno.com
Topic: 1295 Message: 1295

From the DPS Duty Log today

2120 EMPLOYEE INVOLVED IN A PURSUIT (DISTRICT 14)

ON 04/19/01 AT APPROXIMATELY 1415 HOURS OFFICER "X" ATTEMPTED
TO STOP AN ATL (STOLEN VEHICLE, POSSIBLE IMPAIRED DRIVER) E/B ON I-10
AT MP131. THE DRIVER FAILED TO YIELD AND "X" INIATIATED A PURSUIT.
THE PURSUIT WENT INTO THE METR0 PHOENIX AREA (TOP SPEED 70 MPH), THE
RIGHT SIDE TIRES WERE SPIKED IN THE AREA OF 16TH STREET AND I-17. THE
DRIVER CONTINUED E/B ON I-10 FROM THE I-17 JUNCTION WHERE OFFICERS
DEPLOYED STOP STICKS SEVERAL MORE TIMES DEFLATING THE TIRES. THE DRIVER
CONTINUED TO TRAVEL E/B ON THE RIMS. AT MP189 (CASA GRANDE) THE DRIVER
STOPPED THE VEHICLE IN THE MIDDLE OF THE ROAD, WHERE THE DRIVER AND
PASSENGER WERE TAKEN INTO CUSTODY. THE DRIVER WAS BOOKED ON CHARGES OF
POSSESSION OF A STOLEN VEHICLE, DUI, AGGRAVATED ASSAULT. INVESTIGATING
OFFICER "Y", AND "X" WAS THE PURSUIT COMMANDER

This took about 1 1/2 hours and crossed thru 4 radio districts (D14, D5,
D13, D6).

The "aggravated assault" charge came from an atttempt to ram a patrol car

after one of the spiking attempts.

MCSO was also involved. I didn't see or hear Pinal County SO,
surprisingly. I watched the conclusion on tv. TV 3, 10 and 12 had
helo's up.

I have to ask, why did the officer kick the suspects' leg's out from
under him, causing him to fall face first to the pavement, when he
pulled the suspect from the truck? Why couldn't the officer have let
the guy land on his feet, then take him to the ground? In my opinion,
that was excessive. The officer had what appeared to be an AR-15 in
his hand. There was a K-9 team right there, and a third officer was
also there. There was no need to bounce the guy off the pavement,
knocking out a couple of teeth, according to the news later. If
the guy had refused to go down, then the K-9 could have taken him
down. I'd be surprised if someone doesn't attempt to file a lawsuit
alleging excessive force or brutality.

I am not in any way against law enforcement. I just feel that this
one incident was excessive.

I just picked up a Yaesu VR-120 last week. I love it. Tiny size, wideband, 640 memory channels (64x10banks), alpha-tags, runs for days on a couple of doubleA's, 200 bucks. I would not recommend it for beginners though, it has a high learning curve and does not have a full numeric keypad.

Ok we are narrowing it down, do you want to be able to monitor analog trunked systems or not and if so just Moneyrola or GE also?

That will certainly narrow your radio selection down.

What about Mil Air are you interested in that?

I didn't see any feet kicked out from under anybody .. what I saw on TV was that the officers appeared to be commanding the subject to get out of the cab of the truck,and when he didn't respond, one officer - at great danger to himself, yanked open the door and yanked the suspect out of the truck and onto the ground.
I think he yanked hard enough that the suspects feet never touched the cab steps on the way down, and he landed hard on the ground.

The fact that the officer was armed with any kind of weapon (if it actually was an AR-15) does not mean that he is immune from being shot first by a suspect, especially when he can't see whether or not the suspect has a weapon. And oh by the way this is a suspect that had committed a felony and - for 90 minutes - refused to stop, had told his mother he would not be taken alive, and was reported by her to be high on drugs or alcohol. How do you know what he would've done if the DPS officer had not gotten him out of the truck.

I commend the officer for his quick action to get the suspect out in the open, away from any possible weapons in the cab of the truck, and onto the ground where he could be quickly and efficiently subdued. It's unfortunate if the suspect was injured, but he chose to not obey the officers lawful orders to get out of the truck.

No police officer made him steal the truck in the first place, either.

During the pursuit the suspect attempted to run down an officer. Weather he was trying to avoid the spikes or run down the officer it was unknown. Also he was reported by a DPS officer to continually reach under the seat, unknown if he "had" a weapon or not. Also the passenger was an unknown person, possibly a hostage.

Dan you are right, the police did not make him steal the truck, take drugs and gave him ample time to stop. Also he refused the commands of the officer on the PA to stop as well as the helicopter pilot to stop.

With all that factored in it was not unnecessary force. Just officer safety.

Joe

In some countries the guy would have been shot and killed on the spot for
not complying with the officers. So I think with all things considered he
got off rather easy with a fat lip and a couple missing teeth. Maybe next
time he will think first before he does another stupid stunt.

I saw what I saw Dan. The video camera on NewsChopper3 didn't lie. And according to the reporters, another officer had climbed up into the cab from the passenger side and pushed him out, as the officer on the driver's side pulled him out. So that makes 4 officers and the K-9 there to take him down after his feet hit the ground, if his feet had been allowed to do so, and if he had continued to refuse.

Just because the guy was being just plain stupid, under the influence of whatever, doesn't give the officer's the right to use excessive force. The arrest could have been made without kicking his feet out from under him. That's my opinion. I guess since I'm a civilian my opinion doesn't matter?

I don't have a problem with law enforcement. I highly respect 99% of them. They do a dangerous job with low pay and even less "Thanks". It's the 1% that ruin the reputation of the other 99%. Cops are human. They make mistakes just like the rest of us. Sometimes those mistakes are made in the "heat of the moment", under the adrenaline rush. And there's a very fine line between necessary and excessive. However, officers need to be concious of that line, and very careful not to cross it, whether under the view of a video camera or not. Otherwise, how long will it be untill officers are nudging that line farther and farther in their favor? Just when will the majority of the public finally say it's gone too far? How long until someone who really is innocent get the short end of the stick? When will it turn into an "Us vs. Them"?

Maybe that officer's supervisor saw the same thing I did, and already talked to him about it.

Actually, I can tell you that the camera can and does lie, having spent quite a lot of time behind one. The same scene or actions will look different from different angles, so that what from one angle looked nefarious will look normal from another or vice versa. Furthermore, 10 people can view the same 30 seconds of tape and see 10 different events, and none of them will have the perspective of the participants. Both of these statements are especially true when the action is fast paced and involves many actors. The instant-replay in football is a good example of this. The referee will usually have to watch the tape several times, and his decision will be decried by many.

As a point of order, I would suggest that a mailing list devoting to scanning in Arizona might not be the most appropriate forum to discuss possible incidents of police brutality. Perhaps your post would be more on topic at police-brutality@yahoogroups.com <mailto:police-brutality@yahoogroups.com> . I'm sure they would be a more receptive audience.

1312. My first High Speed pursuit

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-21 04:11:40 UTC
From: Paul Wade
Topic: 1312 Message: 1312

Greetings everybody. I have had my scanner less than a week and have already listened to my first high speed chase. This was big news too considering Show Low isn't exactly an "exciting" town in those respects.

Probably 95% chatter was on SLPD 155.5200 and Navajo County SO on 157.3250. Chase was being headed mainly by DPS officers but I never heard a peep on their 460.3000.

Chase on the radio when I clicked on started approximatly 7:10pm, suspect in a '96 Green T-bird eastbound from Salt River Canyon area towards Show Low. I don't know any details of reasons or where it started. Show Low PD and Navajo County SO layed spike strips about 30 miles out of town. the T-bird lost all four tires on spikes but only slowed to 60-70mph. Speed previous was 80 to 100mph.

Chase was joined by helicopter, I assume a DPS craft. Finally chase concluded about 5 miles out of town when a DPS officer rammed the suspect and shoved him off the road. Suspect apprehended shortly afterwards and I didn't hear any reports of injury. I didn't hear any EMS calls afterwards. Ended approximately 7:30pm or so.

If anybody has more info or better details I'd love to hear them. I live in Show Low and live only about 5 miles from where suspect was apprehended.

Thanks for listening.

--Paul

Subject: [ArizonaScanner] Re: DPS Pursuit 4/19/01

I saw what I saw Dan. The video camera on NewsChopper3 didn't lie.
And according to the reporters, another officer had climbed up into
the cab from the passenger side and pushed him out, as the officer on
the driver's side pulled him out.

Well your first mistake is to think the guy was treated wrong
and your second mistake is to trust what you hear from a reporter-
Especially a reporter with more stuff, as is to be assumed by your comments
of viewing channel 3's video.
Sadly enough you tuned in to a station who joined this story quite some
time after the other station had been carrying it.
Earlier on, the truck appeared to drive at an officer who was on the
freeway - quite dramatic video.
If you happen to catch channel 10's video whichh is from the other side of
the truck, you will see that there is not one officer who goes into the cab
and pushes the driver out.
As for his face plant. Cant help the fact the drunk idiot chose to steal a
truck that was so tall that when his drunk butt got pulled out he would
land on his face. IF more criminals were treated like the slime bags they
are, they might reconsider there actions before doing it.
Mike

So that makes 4 officers and the K-
9 there to take him down after his feet hit the ground, if his feet
had been allowed to do so, and if he had continued to refuse.

Just because the guy was being just plain stupid, under the
influence of whatever, doesn't give the officer's the right to use
excessive force. The arrest could have been made without kicking his
feet out from under him. That's my opinion. I guess since I'm a
civilian my opinion doesn't matter?

I don't have a problem with law enforcement. I highly respect 99% of
them. They do a dangerous job with low pay and even less "Thanks".
It's the 1% that ruin the reputation of the other 99%. Cops are
human. They make mistakes just like the rest of us. Sometimes those
mistakes are made in the "heat of the moment", under the adrenaline
rush. And there's a very fine line between necessary and excessive.
However, officers need to be concious of that line, and very careful
not to cross it, whether under the view of a video camera or not.

Otherwise, how long will it be untill officers are nudging that line farther and farther in their favor? Just when will the majority of the public finally say it's gone too far? How long until someone who really is innocent get the short end of the stick? When will it turn into an "Us vs. Them"?

Maybe that officer's supervisor saw the same thing I did, and already talked to him about it.

Maybe if the bad guys had to worry a little more that the Officers could do more, They would be a little more fearful about doing some of the stunts they do . People Will keep pushing the line, both sides, but it is the officers that are risking it for others, not for their own . The crooks will keep seeing how far they can go, and keep on hurting and killing both Civilians and Officers until they are shown that they have gone to far and start fearing what might happen to them in return.

This pursuit started well before Slat River Canyon on US-60. I started hearing them on DPS District 11 (460.475) when they were in the 270's or that area. This was a great pursuit that had some great listening while I could hear it. They tried to spike him at 303 and 310 and I think they got one tire at 310. Not long thereafter they switched channels to District 3 (460.300) and I lost them from where I was (N/B on AZ-87 nearing Payson at the time).

Paul, you might be interested in the group I belong to, Incident Command Page (http://www.incidentcommandpage.com). We are always looking for interested people in many areas of Arizona to keep up informed of things happening in areas outside of our normal signal area.

I agree with Joe and Dan, a felony stop, especially one after a long pursuit, is one of the most dangerous, and adrenaline pumping events a law enforcement officer has to experience. Anyone who would like to criticize their work, should go along for the ride, sometime. We may only hear the voice transmissions filtering out along the airwaves, but you can still feel the excitement and emotion in those voice comms. I, for one, do not think they (our law enforcement community) receive enough "good" press from the media. Tabloid journalism is alive and well; a car chase, shooting ,and arrest & take down all make good copy for the 6 o'clock news. But I think the media fails to take into the account that the law enforcement officers that serve the citizens, are out there everyday, rain or shine, keeping "the bad guys" from our doorstep. Perhaps some "good news" may be forthcoming, until then maybe I'll wait at home, and watch some "Real Stories of the Highway Patrol" reruns.

1320. Dual Trunking Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-23 05:19:09 UTC
From: Mark Shander
Topic: 1320 Message: 1320

Hi All,

Stopped at Radio Shack (*SHOCK*) on the way home to see what they had that was similar to the Motorola that was recommended...they have a dual trunking model that's normally $300 available for $200...I took the salesperson's card, but I'd like to find out if the Motorola model is available somewhere in the Gilbert area....

Thanks.

Regards,

Mark

Hello to all. This is August, I live near Golden Valley, AZ and I am new to this list however I am quite old to scanning and public service radio. I have a question and want to use Roy's post as an example if I may.

(Roy please understand my comment to follow is NOT meant as a slam in any way, just using your post as a typical one and as an example)!! Thanks!! (:-)
++++++++++++++++++++++++++++
The FCC rules tell us that it is NOT LEGAL to discuss any information heard via our scanners with other persons not present when the original message was received with the exception of Broadcast, Amateur Radio and Citizen Band radio broadcasts. (Perhaps I missed a few allowed services.)

I know this may sound strange to many in this day of "Mega Communications" but are any of us who may post a message of this type sticking our neck out? Sticking the list moderator's neck out without realizing it?

I do not wish to upset anyone but wanted to know if this is felt as a problem by others on this list. I think the rule is outdated, with a few exceptions, but it is the law!

Thanks,
August
==========

My question then follows:
"Are we in violation of the rules by repeating Police Radio Messages we overheard on our scanners to others who did not hear it directly at the same time"???

Nope...it was me. I meant the Yaesu VR-120. I'm wondering where I
might find it in the Gilbert area.

Sorry for the confusion.

1329. RE: [ArizonaScanner] Need A Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-23 16:20:18 UTC
From: Carl Maness
Topic: 1297 Message: 1329

Not only is not dual trunking, it's not even single trunking. It's a conventional (albeit wideband) scanner. I have tested it on 800MHz and it works well, but it does NOT follow the trunked systems as the RS/Uniden products do. I use it mostly for fire monitoring. For instance, this morning I heard a water rescue dispatched, then tuned the TV audio frequencies to hear the live helicopter reports, then tuned to the airband helicopter frequency to hear the pilots chit-chat. Listening to a first alarm medical at the airport right now, 12 patients.

HRO on Dunlap has 'em in stock.

1330. Re: [ArizonaScanner] Need A Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-23 16:24:09 UTC
From: Glen Tubbesing
Topic: 1297 Message: 1330

The VR-120 is NOT, I repeat, NOT, a trunking scanner. The radio provides general coverage receive from 100 kHz to 1299.995 MHz (cell blocked) on AM/FM wide and narrow modes, including the AM and FM broadcast bands, HF shortwave bands, VHF/UHF TV bands, VHF AM aircraft band, and a wide range of commercial and public safety frequencies. This radio looks similar to Icom's R-2. Another small receiver you may want to check out is Yaesu's VR-500. AES has it in their new catalog on special at $300, and it has the same range as the VR-120, but also receives CW and LSB/USB, plus 1000 memory channels.

Of course, if you want trunking, try the Radio Shack Pro-94A, or the Uniden BC245XLT or the BC780XLT.

73,

Glen Tubbesing

Hi Carl,

Is the VR-120 considered to be dual trunking? I like the product literature that invites you to play the built-in slot machine when there's a lull in the radio action...! :-)

Regards,

Mark

1332. RE: [ArizonaScanner] My first High Speed pursuit

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-23 16:59:14 UTC
From: Dan Rollman
Topic: 1312 Message: 1332

Donnie,

This is not intented to provide legal advice, but this is how I remember the issue being resolved in an extensive discussion a year or two back... August mentioned the law, but forgets the concept of "case law". This issue has been pretty much been settled through a couple cases, which someone else can track down on Lexis if they are that interested...

It is unlawful to divulge the contents of a communication if it is unlawful to monitor that communication because of an expectation of privacy. The intent of the law, as it's been received by the courts, is to keep people (in most instances, though some criminal activity monitored has yielded exceptions) from divulging the contents of cellular / cordless, etc. phone calls

Essentially, all it says, is if I can't listen to it, you can't listen to it for me and just tell me what they said. Pretty much common sense. It just clears up a plausible defense of "I didn't list to it, I just listened to what Jose told me they said on the cellphones, and played the tape he recorded. But no, I didn't listen to the illegally monitored transmission."

It's very important to keep in mind that what laws say are relatively meaningly.The only federal laws that matter in this country, and how they matter, is simply a matter of what the U.S. Attorney's Office and the courts say. In many cases what a law says has nothing to do with anything.

Anything is illegal if the U.S. Attorney's Office wants to charge you with it using some variation of a law that may or may not relate, and can find a judge who will agree with them. But charging a scanner listener (or even the media with a much wider audience!) with monitoring, even replaying mainstream fire, police, etc. scanner traffic, has never been enforced as best I know.

Dan

Hi Carl,

Thanks for sharing this. I guess the $100 off is a better deal on the
RS scanner than I thought.

Thanks to everyone for their help.

Regards,

Mark

1335. Re - interception and divulgence

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-24 14:37:19 UTC
From: zerg90@webtv.net
Topic: 1335 Message: 1335

You can read here what one Fed Judge has to say on the topic.

==========

May 10, 1999 - the orders from the judge are online in the Gass case - please see http://www.afn.org/~jlr/gass1.txt and see http://www.afn.org/~jlr/gass2.txt - one is a judgement of aquittal and the other is a denial of the governments request for a retrial - both are dated 4 April 1996.

==========

A brief recap of the Fed laws on this subject goes this way - 1934 Communications Act - no one can intercept and divulge (protects telegrams sent by radio?) - 1968 Omnibus Crime Bill (addresses wiretaps) - 1986 ECPA (makes it illegal to monitor cell phones) - ?1994 ECPA extended to cordless phones

For more info see www.openness.org and www.geocities.com/45peter/gass.html and www.strongsignals.net (look under INFO on the left side for international scanner laws)

Peter S

1336. RE: [ArizonaScanner] Need A Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-24 16:23:25 UTC
From: Dirtblack
Topic: 1297 Message: 1336

Does anyone have the Pro-94a? I am thinking of buying one and would like to know how well it works compared to the others.

-----Original Message-----

To: ArizonaScanner@yahoogroups.com
Subject: Re: [ArizonaScanner] Need A Scanner

The VR-120 is NOT, I repeat, NOT, a trunking scanner. The radio provides general coverage receive from 100 kHz to 1299.995 MHz (cell blocked) on AM/FM wide and narrow modes, including the AM and FM broadcast bands, HF shortwave bands, VHF/UHF TV bands, VHF AM aircraft band, and a wide range of commercial and public safety frequencies. This radio looks similar to Icom's R-2. Another small receiver you may want to check out is Yaesu's VR-500. AES has it in their new catalog on special at $300, and it has the same range as the VR-120, but also receives CW and LSB/USB, plus 1000 memory channels.

Of course, if you want trunking, try the Radio Shack Pro-94A, or the Uniden BC245XLT or the BC780XLT.

Hi Carl,

Is the VR-120 considered to be dual trunking? I like the product literature that invites you to play the built-in slot machine when there's a lull in the radio action...! :-)

Regards,

Mark

1337. Pro94A?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-24 19:13:28 UTC
From: Charles Simmont
Topic: 1337 Message: 1337

Whats the deal with the Pro-94A? Is it any different that the first release of the Pro94? Does it now track Mot & Edacs while it scans conventional?

Charles Simmont <icp509@...>

Views expressed are my own and not that of ICP unless otherwise stated.

1338. Re: [ArizonaScanner] Pro94A?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-24 22:59:32 UTC
From: Glen Tubbesing
Topic: 1337 Message: 1338

I don't have a 94A (but I sure wish I did!), just the original Pro94. The main difference is the 94A will scan trunking and conventional channels simultaneously.

1342. RE: [ArizonaScanner] Need A Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-24 17:14:33 UTC
From: Sue Gerlings
Topic: 1297 Message: 1342

I HAVE HAD ONE FOR THE LAST YEAR. I HAVE ONLY HAVE ONE COMPLAINT AND THAT IS YOU CANNOT LISTEN TO THE TRUNK FREQS AND THE CONV. ONES AT THE SAME TIME. I HAVE SOLVE THIS BY USING THE FIRST BANK FOR TRUNK AND THE SEC. FOR CONV. I'M IN COLO. AND THE POLICE SOMETIME GO TO I-TAC CHANNEL WHICH IS CONV. AND SOME OF THE POLICE ARE STILL ON UHF AND VHF. THERE STILL IS A PROBLEM BECAUSE YOU CAN ONLY LISTEN TO ONE BANK AT A TIME. COVERAGE AND RECEPTION ARE OK AND I ENJOY USING IT. I HAVE NO TECH. PROBLEMS.

Does anyone have the Pro-94a? I am thinking of buying one and would like to know how well it works compared to the others.

Subject: Re: [ArizonaScanner] Need A Scanner

The VR-120 is NOT, I repeat, NOT, a trunking scanner. The radio provides general coverage receive from 100 kHz to 1299.995 MHz (cell blocked) on AM/FM wide and narrow modes, including the AM and FM broadcast bands, HF shortwave bands, VHF/UHF TV bands, VHF AM aircraft band, and a wide range of commercial and public safety frequencies.
This radio looks similar to Icom's R-2. Another small receiver you may want to check out is Yaesu's VR-500. AES has it in their new catalog on

special at $300, and it has the same range as the
VR-120, but also
receives CW and LSB/USB, plus 1000 memory
channels.

Of course, if you want trunking, try the Radio Shack Pro-94A,
or the
Uniden BC245XLT or the BC780XLT.

Hi Carl,

Is the
VR-120 considered to be dual trunking? I like the product

literature that invites you to play the built-in slot machine when

there's a lull in the radio action...! :-)

Regards,

Mark

Carl Maness wrote:

I just picked up a Yaesu VR-120 last week. I love
it. Tiny size,
wideband,
640 memory channels
(64x10banks), alpha-tags, runs for days on a
couple of

doubleA's, 200 bucks. I would not recommend it for beginners
though, it
has
a high learning curve and does not have a full numeric
keypad.

Hi
All,

I need a recommendation for a small,
portable programmable scanner.
I'd
like the cost to be
moderate, if possible.

Thanks!

Regards,

Mark Shander

1343. RE: [ArizonaScanner] Need A Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-25 00:02:30 UTC
From: Charles Simmont
Topic: 1297 Message: 1343

I was under the impression that the Pro94a will scan trunk frequencies as
well as conventional ones at the same time unlike the original Pro94. I
will find out for sure once I go to Radio Shack and check it out.

At 11:14 AM 4/24/01 -0600, you wrote:

1344. UPLINK FREQ

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-25 14:05:55 UTC
From: Don Armstrong
Topic: 1344 Message: 1344

Parden the mass emailing but, someone was asking me recently if I knew the uplink freq for Mt Graham's NOAA transmitter on 162.550... well, being the "total blonde" that I am, I have frogotten who asked, and since I have found it, I am passing it along, hopefully ,to the individule that was asking for this info!!

416.375 NOAA uplink freq to Mt Graham

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

1345. please trim replies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-25 15:40:42 UTC
From: riechert@qwest.net
Topic: 1345 Message: 1345

May I suggest that when replying to messages the text of the message be trimmed down to the
minimum? I get the digest and it's a real pain to scroll down through all the duplicated text and
especially the duplicated footer that is added to each message. The footer is long enough as it is
and seeing it multiple times in a row makes it just that much worse.

Jerry

1346. RE: [ArizonaScanner] Need A Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-25 15:45:00 UTC
From: Dirtblack
Topic: 1297 Message: 1346

I checked out the manual for the pro 94 online, it does trunk and scan conventional at the same time. It also has some neat features as well. It was really worth the read.

-----Original Message-----

Subject: RE: [ArizonaScanner] Need A Scanner

I was under the impression that the Pro94a will scan trunk frequencies as
well as conventional ones at the same time unlike the original Pro94. I will find out for sure once I go to Radio Shack and check it out.

At 11:14 AM 4/24/01 -0600, you wrote:

1347. RE: [ArizonaScanner] please trim replies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-25 16:11:34 UTC
From: Dan Rollman
Topic: 1345 Message: 1347

Thanks for mentioning that, Jerry.

EVERYONE: General email-rule-of-them... Before you hit send, scroll back through the entire message and get rid of EVERYTHING that you cannot explain why you need to include in your sent message. This does not mean getting rid of the actual message you are replying to, just the junk and footers not needed.

This problem is primarily observed in multiple replies to digest messages, but replying to a single email without removing the ad and footer from it will result in two sets of ads and footers (one added to your reply by Yahoo, and the original one Yahoo put on the message you replied to).

That said, it is the responsibility of anyone who posts / replies / otherwise sends messages to ArizonaScanner to scroll through their completed message and delete anything unnecessary. This includes long messages where they don't need to quote the whole thing, extra messages in a digest that they aren't referring to, all footers and advertisements, etc.

There is a good reason for the info in the footer to be there... particularly for those not familiar with scanning in Arizona yet, or who may not be familiar with YahooGroups. But only one footer needs to end up on each posting. Let's everyone do our parts to keep ArizonaScanner tidy and easy to read.

Thanks guys!

Subject: [ArizonaScanner] please trim replies

May I suggest that when replying to messages the text of the message be trimmed down to
the
minimum? I get the digest and it's a real pain to scroll down through all the duplicated
text and
especially the duplicated footer that is added to each message. The footer is long enough
as it is
and seeing it multiple times in a row makes it just that much worse.

Jerry

1348. EDIT PLEASE!!!!!!!!!!!!!!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-25 16:25:37 UTC
From: adam
Topic: 1348 Message: 1348

Hello Dan and all! I was wondering if maybe Dan could give some guidelines on editing responses.
I am simply amazed at how many folks on here quote entire digests and waste bandwidth and time with sending the same drivel and yahoo headers and footers over and over and over..This is a very informative list and many knowledgeable people here so I can not imagine why this is occurring.
Thanks, Adam

1353. Mobile Imaging Systems (MIS)

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-04-27 03:56:15 UTC
From: d952@mohaveaz.com
Topic: 1353 Message: 1353

Our local police department has a Jeep w/what appears to be a divice similar to a FLIR seen on helicopters. Nerver catch it sitting still long enough where I can ask some Q's re: what is it and how does it work. A couple of weeks ago while in Tehachapi, Calif. a Kern Cnty SO unit pulled up beside me in traffic and he too had one located on the roof just behind the light bar. Has anyone else seen any of these units and why would a mobile unit need one? Seems as though he would have to drive to a high point to effectively utilize the unit.

Really is amazing the funding & technological tools coming from LEAA now a days to local law enforcement agencies.

Sounds like that is exactly what it is.
Border Patrol has them on several of their units as does Scottsdale PD and Paradise Valley PD.

I have played around with the Scottsdale PD unit's FLIR and actually there is not need to be real high.
That stuff penetrates through a lot of brush and works excellent!

Essentially it does not matter if you are in a helicopter trying to look through the top of a bush or in a car looking through the side of a bush.
They work great at low levels, just as they do at higher levels!

Hope that helps

Mike

every bc should have at least 2 vhf ,a cell phone, at least 1 or 2 uhf, an
mdt and perhaps an avl system. it depends on the pd radios...just like
someone said tempe and glendale will have an 800 mhz rad for the pd side.
with sky harbor being on an 800 system ,they probably have a rad for skycomm.

1368. Uniden/Pro radio control software

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-01 01:19:56 UTC
From: tracy@freqofnature.com
Topic: 1368 Message: 1368

Freq Of Nature Uniden radio control software.

This only works with Windows 9x/Me at this time. I¡¦ll be releasing a version for Windows NT/2000 soon. This is strictly a beta version of the software and it will expire on 8/15/2001. If we are still beta testing in mid August, I¡¦ll release an update to extend the date. Depending on how much effort I invest in this project, I¡¦ll either charge a small amount for the software or nothing at all, but we¡¦ll cross that bridge when I¡¦m done playing with it □º

The URL to download it is
http://www.freqofnature.com/fon100b/FON100b.zip

Have fun, I¡¦ve sure had fun writing it.

Tracy

I don't know what the new directory says, but 460.400 (PL 151.4) is Metro
East, 460.325 (PL 100.0) is Metro Central, & 460.300 (PL 151.4) is
Metro West. Hope that helps.

1373. RE: [ArizonaScanner] DPS East/West

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-01 04:26:11 UTC
From: Dan Rollman
Topic: 1369 Message: 1373

Charles info is correct. This error was missed in the new Metro Guide.
If you look at Page 14, you see District-5, District-13, and District-14.
The boundaries of the districts remain the same, and the frequency
assignments also remained the same, but District 5 (460.325) is now called
Metro Central, District 13 (460.400) is now called Metro East, and District
14 (460.300) is now called Metro West.

1376. Re: [ArizonaScanner] DPS East/West

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-01 15:40:08 UTC
From: Danz, Dan
Topic: 1369 Message: 1376

One thing that might be confusing a listener is that these frequencies are also in use in other parts of the state, but with different PL tones.

```
PL 151.4 PL 100.0
--------- --------
460.025 D6 Casa Grande D2 / Flagstaff
460.300 D14 / Metro West D3 / Holbrook
460.325 D9 / Sierra Vista D5 / Metro Central
460.400 D13 / Metro East D4 / Yuma
460.425 D8 / Tucson D12 / Prescott
460.475 D11 / Globe D1 / Kingman
```

For example, there are some places in Scottsdale and Fountain Hills where Yuma comes booming in on the Metro East channel if you don't have the PL set. The callsigns are different (400 series instead of {1-3,7}Edward series) so they're easy to keep separated and interesting to listen to.

1377. Digital scanner "in about a year"

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-01 23:02:26 UTC
From: Dan Rollman
Topic: 1377 Message: 1377

Don Bishop, Editorial Director, with Mobile Radio Technology magazine reports that a Project 25 scanner is expected ?in about a year? from Uniden. This Online Exclusive was released just yesterday by MRT.

Remember that the few Arizona agencies that have gone digital, namely the Maricopa County Sheriff's Office, do use Project-25 systems. Of course the threat of encryption would then loom, but that's a whole 'nother can of worms...

While many scanner enthusiasts have known for many months that a digital scanner was in the works, and some more official sources have made discreet mention of it, this is the first time I know of that Jim Cassidy, Uniden's man in charge of scanner development, has made it publicly very clear that Uniden is developing a P25 scanner.

You can read the article from the link below:

Pima County SO has a rare system type that cannot be tracked by the 780.
PCSO uses an EF Johnson MultiNet II system, which uses an ENHANCED LTR
protocol.

The 780 can only track traditional EF Johnson MultiNet I systems (not
MultiNet II), because MultiNet I systems use regular LTR, not enhanced LTR.

Subject: BC780 question

I live in Pima County Arizona where the Sheriffs
Office has an EF
Johnson
Multi net2 system. The 780 can't track the Multi Net
system, only a
standard

EF Johnson. When could we see an updated 780 for Muti
Net? We in Pima
County

have been in the cold for over a decade now as it
relates to listing to
our
Sheriffs Office ever since they went to the 800 MHz
trunk system. Thank
you,

Andy Smith
Tucson Az.

Phoenix Surplus Auction To Be Held May 19

May 15, 2001

If you've been looking for a deal on a police motorcycle, a paint tinter machine, fire ladder truck or a jeep, you may want to check out the city of Phoenix Surplus Auction. You'll have a chance to bid on these and many other items including approximately 46 cars, 21 pickups, 11 utility trucks, 20 police motorcycles, building materials, furniture, appliances, scrap wire and much more at 8 a.m. Saturday, May 19, at the city's auction yard, 2820 S. 22nd Ave. (south of Lower Buckeye Road).

Gates open to the public at 6:30 a.m. and close at 3 p.m. The auction starts at 8 a.m. Cashiers will remain open until 1:30 p.m. the day of the auction. Items to be sold may be inspected at the auction yard May 17 and 18 from 9 a.m. to 3 p.m.

All bidders at the auction need to register and must show photo identification to receive a bidder's card. Purchases must be removed from the auction yard within 10 working days after the auction.

For more information about the auction, call the city's Surplus Auction hotline at (602) 534-0828.

To read other city news items, visit
http://phoenix.gov/NEWSREL/index.html.

1389. has anyone seen the strange boxes under the lights?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-17 16:09:01 UTC
From: famwiley@aol.com
Topic: 1389 Message: 1389

While at Phoenix Memorial ER, dropping off a Patient, I saw a box mounted under the street light at 5th Ave and Yavapi. It was about 14-18 inches long, maybe 8 '' wide and 6 '' tall. it had a 18 '' whip antenna with 2 exposed coils, similar to a cell phone antenna, but pointing down. We then noticed them every 1/4 mile or so, east along buckeye road.

are these the gunfire sensors ive heard about?

Kevin

1390. Street Light Antennas

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-17 20:49:39 UTC
From: Gary Allen
Topic: 1389 Message: 1390

Most likely the antennas you saw pointing down and attached to streetlights are part of Metricom's Richochet wireless modem system. One subscribes to the service, attaches a small radio modem to your laptop (or even desktop), and you can receive e-mail and Internet service wirelessly.

The receivers obtain power from the street light, and operate in relay mode: they receive a laptop signal, and then pass it along to the next streetlight antenna in the series. All the antennas in a region are "pointed" to a wired connection to the Internet, and eventually the relayed packets arrive there. They come back down to the sender the same way. Speeds are up to 128k in some regions.

Richochet pays the city some amount of money to use the streetlights, and usually provides the municipality with some number of wireless modems for them to use, too.

I've seen these on the south side of ASU West, also. The following is a copy and paste from the socalscan list here on Yahoo groups.

John H. Guetherman

From: "Timothy V. Peters" <tvp@t...>
Date: Mon Apr 23, 2001 5:21 pm
Subject: Re: [socalscan] San Diego Light Pole Antenna

Scott Underwood wrote:

> I don't live in SDG&E's area. But from where I am at (in an SCE area that has the same thing) I was told, at one time, these were designed for automated wireless meter reading (I've also seen some of them that are pole-mounted, vertically, to a breaker box and where the actual round meter receptacle would be, a transmitter and pigtail antenna protrudes.) I'm uncertain if these are still being used for this, if at all, as I've also heard recently that they were looking into using these for high speed wireless internet access. Supposedly, they got it to work, but were still working on getting the speed up to an acceptable rate. (That from an undisclosed source that actually worked for SCE at the time.)

The current Ricochet technology is 128 Kb/S. SCE still operates a remote meter reading network using older Metricom technology. This is the business Metricom was in before they built out a wireless Internet network.

> FYI: These wouldn't be Ricochet nodes, as previously speculated, as the poles are owned by your local utility company and/or city.

Ah, but they probably are. Metricom, the owner of the Ricochet Network, pays the municipality a monthly fee for the use of the poles/lights.

> Anything attached to them would have to be approved by them, and also, your utility company and/or city would be responsible (and more importantly, liable) for whatever is hanging from their property. More than likely, your utility company and/or city's insurance provider wouldn't provide coverage for this. If that box failed and caused damage to the pole, light fixture, internal wiring of the pole, or if the pole failed and that box was the one thing that struck or injured a vehicle, pedestrian, or personal property it would create a huge legal snafu as to who would to be held liable and accountable.

Metricom fully indemnifies the City/Utility.

> I highly doubt they'd allow a small-time internet company (when compared to a major power company or city) attach anything like that...especially to a street light. They simply wouldn't have enough insurance coverage available to pay out like a city or power company would (as most of these are self-insured or part of a joint-powers authority.)

Metricom is backed by Paul Allen (Co-Founder of Microsoft) and Worldcom. They have all the insurance anybody wants. Cash, well.....

> Just my two cents. I could be wrong. :-)

You are. How can I be sure? Metricom is a client, and we've been working with them for a couple of years now. Sorry. :-)

> > In San Diego, about every 8th mile or so, is a box mounted under the arm of a street light pole. There is an antenna mounted to this box (Upside down). It appears that the antenna is a dual band.

It's actually a 900 MHz no ground-plane design.

> > There appears to be a power cord from this box to the arm.

There is.

> > I get no RF from this device using a frequency counter. Anyone know what this device is used for?

You can't read it with a counter, because the counter isn't fast enough. The spread-spectrum emissions look like noise to the counter.

If the box is mounted on a street light and NOT on a traffic light AND the box is white then it is probably a poletop radio used for mobile Internet access. If they are on traffic lights and NOT on street lights then your guess is as good as mine but mine would be that it's a pre-emption device used by emergency vehichles to switch the traffic signal to green (I could use one of those). This is is speculative since I don't live in Phoenix and haven't seen the device your asking about.

Although the wireless Internet is a valid idea, I just didn't see the locals in that area using wireless Internet, which is why my first guess was the gun fire location system, which would fit a lot better at 7 Ave and buckeye road.

This is additional info reference the MultiNet II developements.

J-Trax EFJohnson Multinet ® Tracking Software
Joe Cardani, who brought us the terrific E-Trax software program for tracking Ericsson systems has done it again! Scanner Master will be the exclusive distributor of Joe's J-Trax Multinet tracking software. The software was announced at the recent East Coast meeting of APCO in Lancaster, PA. A flyer detailing some of the features of J-Trax will be available at the Scanner Master booth. J-Trax still requires a small amount of final development and likely will not be available for sale until late Summer. No price has been announced.

If you live in places like Chester County, PA, Martin County, FL, Tucson, AZ, Bloomington-Normal, IL and others with MultiNet you'll definitely want to stay tuned.

I have used Cardani's E-trax software when PCSD was using the EDACS system and it worked flawlessly.

The traffic light override is an optical system. It responds to a special strobe light mounted on the fire trucks. The City of Tempe has several of them, and plans to install them at every traffic light. The City of Glendale has a pair of them by Station 157. Don't know who else has them.

Richocet has a website: http://www.ricochet.com/. Here's the technical info: http://www.ricochet.com/ricochet_advantage/benefits/home/technology.html. It includes a drawing of the lightpole radios.

Native Air has a bit of a situation as far as frequencies go in the Prescott area.
They use radios that have the security frequency for YRMC for communications while at the hospital.

They are dispatched purely by telephone for flights.

Once Airborne it depends on where they are going.

Once you are about 100 feet in the air you can hit the 900 mhz trunked system off of south mountain.
If headed towards bagdad, they use a repeater off of Mt Eldon.
Its Friday aat 5:30 and everyone is gone but I show two frequencies in our handy dandy guide.

rx: 448.475 and 448.875
tx: 443.475 and 443.875 both have a PL of 100.

I can do some more checking on Monday.
We use the new technisonic radios now and the pilots just dial up the preset. They dont show the frequency like the old wolfsburgs do.

Native also has conventional repeaters on MT ord and in Globe (pinal peak)

Times have changed with the FCC and we just cant find a common frequency that will work for us statewide like Air-Evac was able to get many many years ago.

If I can help anymore let me know

Mike Todd

1404. RE: [ArizonaScanner] Native Air 4

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-19 01:02:26 UTC
From: Michael Todd
Topic: 1401 Message: 1404

They certainly DO NOT use ham radios up there at any time.
I will do some checking and post all the frequencies that I am aware of for us.

We have several repeaters around the state that they can access but all of them are essentially commercial repeaters that are shared. The 900 and 450 mhz systems provide us a much more "private" system. However, they have both proven to not be half as good as the radio shop claimed they would be.

Mike

thanks for the info
i can't se them using ham freqs for communications unless they have a ham ticket

if you find anything else i'd be happy to search around up here :)

Yes, that is what I saw under the light. It was a ricochet still find it strange to find them down there rather than in more business oriented areas

Jerry
I dont know about the Ham Thing
I know nothing about them. Talked to Dan a bit and he explained that those are ham frequencies.
All I know is that is a shared repeater that is rented, and it used by several construction companies.
I will do some checking to confirm that I did not transpose the numbers or do something silly like that.

Mike
